Abstract	16
Chapter 1: Introduction and Review of literature.....	19
1.1 Amyloid form of protein produced by microorganisms.....	21
1.2 Amyloid producers in natural habitat.....	21
1.2.1 Curli amyloid	22
1.2.2 TasA in <i>Bacillus</i> sp.	23
1.2.3 Tafi amyloid.....	24
1.2.4 Chaplin amyloid.....	25
1.2.5 Harpins	25
1.2.6 Chorion.....	26
1.2.7 Mycobacterium tuberculosis pili (MTP)	26
1.2.8 Hydrophobins	27
1.3 Methods to study amyloid.....	28
1.3.1 Congo red binding.....	29
1.3.2 Thioflavin T staining.....	29
1.3.3 Resistance to SDS (Sodium dodecyl sulphate)	29
1.3.4 Electron microscopy.....	30
1.3.5 FTIR	30
1.3.6 CD spectra.....	30
1.4 Biotechnological applications of amyloids	30
1.5 Flocculation process.....	31
1.5.1 Chemical flocculants	31
1.5.2 Bioflocculants	32
1.5.3 Plant based bioflocculants.....	33
1.5.4 Microbial bioflocculants	34

1.5.5 Biofloculants from various bacteria	35
1.5.6 Role of Nutrients in biofloculant production.....	38
1.6 Optimization of media for biofloculant production using design of experiments (DOE)	40
1.6.1 Plackett Burman analysis	40
1.6.2 Response surface methodology	40
1.7 Microalgae cultivation and its harvesting	45
1.7.1 Microalgae for waste water treatment.....	47
1.8 Amyloids and biofilms	50
1.9 Biofilm disruption	52
Rationale	54
Objectives.....	56
Chapter 2: Screening of amyloid producing bacteria from activated sludge and characterization of its biofloculant.....	74
2.1 Functional bacterial amyloids (FuBa)	74
2.2 Materials and Methods.....	74
2.2.1 Isolation of amyloid producing bacteria.....	74
2.2.2 Staining of amyloid producing isolates by thioflavin T fluorescence	74
2.2.3 Measurement of the flocculation activity	75
2.2.4 Identification of the selected isolate	75
2.2.5 Characterization of isolate CR4	76
2.2.5.1 Congo red staining	76
2.2.5.2 Thioflavin T staining and Confocal microscopy	76
2.2.5.3 SEM analysis of <i>B. cereus</i> CR4	76
2.2.6 Purification and characterization of amyloid produced by isolate CR4.....	77
2.2.7 Flocculation activity of the amyloid protein obtained from isolate CR4	77
2.2.8 Characterization of the amyloid nature of the protein obtained from isolate CR4.....	78
2.2.8.1 Congo red birefringence assay	78
2.2.8.2 Congo red spectral shift assay	78
2.2.8.3 SDS-PAGE analysis.....	78
2.2.8.4 FTIR analysis	79

2.2.8.5 Ammoniacal silver staining.....	79
2.2.8.6 TEM analysis.....	79
2.2.8.7 CD spectra analysis	80
2.2.9 Zeta potential analysis of flocs of kaolin particles produced by purified amyloid biofloculant CR4	80
2.2.10 Protein sequencing	80
2.2.11 Time course of biofloculant production	80
2.2.12 Quantification of amyloid by SDS agarose gel electrophoresis	80
2.3 Results and Discussion.....	81
2.3.1 Isolation of amyloid producing bacteria.....	81
2.3.2 Flocculation activity of amyloid producing bacteria.....	84
2.3.4 Identification of isolate CR4	86
2.3.5 Confirmation of amyloid production	89
2.3.5.1 Ammoniacal silver staining.....	90
2.3.5.2 Congo red birefringence assay.	92
2.3.5.3 Congo red spectral shift assay	93
2.3.5.4 Direct visualization of amyloid under Transmission electron microscope	93
2.3.5.5 Fourier transformed infrared spectroscopy (FTIR)	94
2.3.5.6 Circular dichroism (CD) spectra	94
2.3.5.7 Criteria for classification of protein as amyloid.....	94
2.3.6 Zeta potential analysis.....	96
2.3.7 Quantification of <i>B.cereus</i> CR4 amyloid biofloculant CR4.....	97
2.3.8 Time course of biofloculant production	99
2.3.9 pH and Temperature stability of biofloculant.....	100
2.3.10 Identification of amyloid biofloculant CR4.....	100
Chapter 3: Production of biofloculant CR4 and its biotechnological applications	111
3.1 Materials and Methods.....	112
3.1.1 Media optimization for biofloculant CR4 production by <i>B.cereus</i> CR4.....	112
3.1.1.1 Effect of temperature and pH on biofloculant production by <i>B. cereus</i> CR4.....	112
3.1.1.2 Plackett Burman design for screening of media components for biofloculant production by <i>B. cereus</i> CR4	112

3.1.1.3 Media optimization using RSM for bioflocculant production by <i>B. cereus</i> CR4 ...	113
3.1.2 Optimization of flocculation method of kaolin with purified protein using CCD	114
3.1.3 <i>Scenedesmus</i> sp. cultivation and optimization of media	115
3.1.3.1 Plackett Burman design for screening of media components for growth of <i>Scenedesmus</i>	115
3.1.3.2 Response surface methodology for media optimization for <i>Scenedesmus</i>	116
3.1.4 Application of <i>B. cereus</i> CR4 in microalgal harvest	117
3.1.4.1 Optimization of <i>Scenedesmus</i> sp. flocculation by <i>B. cereus</i> CR4 biomass using CCD	117
3.1.4.2 Microscopy of flocculated microalgae	117
3.1.4.3 Factors affecting cell viability of <i>Scenedesmus</i> sp.	118
3.1.4.4 Co-cultivation of <i>Bacillus</i> CR4 and <i>Scenedesmus</i> sp.	118
3.1.5 Application of <i>B. cereus</i> CR4 in harvest of <i>Scenedesmus</i> employed for nutrient removal from wastewater	118
3.1.5.1 Bench scale studies	119
3.1.5.2 Batch reactor for nutrient removal from waste water	119
3.1.5.3 Preparation of bioflocculant for continuous reactor	119
3.1.5.4 Continuous reactor for nutrient removal from wastewater	120
3.1.5.5 Optimization of <i>Scenedesmus</i> sp. flocculation in continuous reactor	120
3.1.5.6 Estimation of Nitrate	121
3.1.5.7 Estimation of phosphate	121
3.2 Results and Discussion	121
3.2.1 Media optimization for bioflocculant CR4 production by <i>B.cereus</i> CR4	121
3.2.1.1 Effect of temperature on bioflocculant CR4 production	121
3.2.1.2 Effect of pH on bioflocculant production	122
3.2.1.3 Plackett Burman analysis for bioflocculant CR4 production.	123
3.2.1.4 Optimization of bioflocculant production by Response surface methodology	126
3.2.2 Optimization of flocculation method of kaolin with purified amyloid bioflocculant protein using CCD	131
3.2.2.1 Effect of pH and amyloid concentration on flocculation of kaolin	131

3.2.2.2 Optimization of flocculation of kaolin with purified bioflocculant CR4 by response surface methodology.	132
3.2.3 <i>Scenedesmus</i> cultivation and optimization of its medium.....	138
3.2.3.1 Growth of <i>Scenedesmus</i> in different media.....	139
3.2.3.2 Plackett Burman analysis of different media components for growth of <i>Scenedesmus</i>	140
3.2.3.3 Response surface methodology for media optimization (CCD).....	142
3.2.3.4 Optimization of flocculation of microalgae by Response surface methodology.....	145
3.2.4 Factors affecting cell viability of <i>Scenedesmus</i> sp.....	155
3.2.4.1 Effect of pH and Fe ⁺³ on cell viability and growth	155
3.2.4.2 Effect of microalgal growth media on growth and bioflocculant CR4 production by <i>B. cereus</i> CR4.....	161
3.2.4.3 Optimization of cocultivation condition for aggregation of <i>Bacillus</i> CR4 and <i>Scenedesmus</i> sp.	164
3.2.5 Application of <i>B. cereus</i> CR4 in harvest of <i>Scenedesmus</i> employed for nutrient removal	168
3.2.5.1 Nutrient removal from waste water at bench scale	168
3.2.5.2 Nutrient removal from waste water at batch reactor level	170
3.2.6 Nutrient removal from waste water in continuous reactor	172
3.2.6.1 Optimization of flocculation for continuous reactor by response surface methodology	173
Chapter 4. Studies on amyloid production and biofilm formation of <i>B. cereus</i> CR4 and other <i>Bacillus</i> spp.	182
4.1 Materials and Methods.....	184
4.1.1 Quantification of biofilm.....	184
4.1.2 Quantification of Amyloids.....	184
4.1.3 Effect of Lactose, Manganese and Glycerol	185
4.1.3.1 Effect of Lactose, MnCl ₂ and glycerol	185
4.1.4 Effect of stress agents on growth, amyloid and flocculation activity.....	185
4.1.5 <i>Bacillus</i> species used for the studies	185
4.1.6 Observation of biofilm form	185
4.1.7 Measurement of cell surface hydrophobicity	185

4.2 Results and Discussion.....	186
4.2.1 Effect of Lactose, MnCl ₂ and Glycerol	186
4.2.2 Effect of ethanol stress	190
4.2.3 Effect of DMSO stress	193
4.2.4 Effect of NaCl stress	194
4.2.5 Study of <i>Bacillus</i> spp. biofilms	197
4.2.6 MATH Assay for estimation of cell surface hydrophobicity	199
4.2.7 Effect of D amino acids on biofilm formation	202
Chapter 5. Cloning of amyloid bioflocculant gene of <i>B. cereus</i> CR4.....	209
5.1 CDAG System	209
5.1.1 Applications of CDAG system.....	211
5.2 Materials and Methods.....	211
5.2.2 Cloning of bioflocculant CR4 gene.....	213
5.2.3 Cloning of <i>tasA</i> gene from <i>B. cereus</i> CR4.....	213
5.3 Results and Discussion.....	214
5.3.1 Identification of amyloid bioflocculant CR4 gene	214
Summary	222
Conclusion	230
List of publications.....	236
List of conferences	236
List of courses	236
