

# List of Figures

1.1	A typical neutron emission spectrum showing contributions of different reaction mechanisms in nuclear reaction . . . . .	4
1.2	Calculated pre-equilibrium spectra, including contributions from multiple pre-equilibrium processes. . . . .	10
1.3	Neutron emission spectra at various angles for 256 MeV $p + {}^{208}\text{Pb}$ , compared with data. . . . .	11
1.4	Experimental and calculated spectra on ${}^{93}\text{Nb}$ . Solid lines are the results of the HMS Monte Carlo simulation after the reduction by a factor of 0.6. The HMS results without any such reduction are shown as dashed lines. . . . .	12
2.1	Measured gamma spectra of ${}^{152}\text{Eu}$ calibration source . . . . .	31
2.2	Excitation function ${}^{100}\text{Pd}$ residue in the ${}^{14}\text{N} + {}^{103}\text{Rh}$ reaction with different level-density options. . . . .	44
2.3	Excitation functions of $\text{Ag}$ residues formed in the interaction of ${}^{14}\text{N}$ with ${}^{103}\text{Rh}$ as indicated. The solid symbols are the experimental results of this paper. The calculated excitation functions are shown as the red solid curves (OB level density), the blue dashed curves (FG level density), and the black dashed-dotted curves (KR level density) as obtained with the nuclear reaction code ALICE2014. . . . .	47
2.4	Excitation function of ${}^{104}\text{Cd}$ residues formed in the interaction of ${}^{14}\text{N}$ with ${}^{103}\text{Rh}$ . Also see the caption for Fig.2.3 for more details. . . . .	48
2.5	Excitation function of $\text{Pd}$ residues formed in the interaction of ${}^{14}\text{N}$ with ${}^{103}\text{Rh}$ as indicated. Also see the caption for Fig.2.3 for more details. . . . .	49
2.6	Excitation function of $\text{Rh}$ residues formed in the interaction of ${}^{14}\text{N}$ with ${}^{103}\text{Rh}$ as indicated. Also see the caption for Fig.2.3 for more details. . . . .	50
2.7	Excitation function of $\text{Ru}$ residues formed in the interaction of ${}^{14}\text{N}$ with ${}^{103}\text{Rh}$ as indicated. Also see the caption for Fig.2.3 for more details. . . . .	51

2.8	Excitation function of $Tc$ residues formed in the interaction of $^{14}N$ with $^{103}Rh$ as indicated. Also see the caption for Fig. 2.3 for more details. . . . .	52
2.9	Intercomparison of excitation functions of $^{94}Tc$ for $^{12}C$ , $^{14}N$ , and $^{16}O+^{103}Rh$ systems. Theoretical calculations with the HMS model are shown by the solid red curves (OB), the dashed blue curves (FG), and the black dashed-dotted curves (KR). . . . .	53
2.10	Intercomparison of excitation functions of $^{99}Rh$ for $^{12}C$ , $^{14}N$ , and $^{16}O+^{103}Rh$ systems. Theoretical calculations with the HMS model are shown by the solid red curves (OB), the dashed blue curves (FG), and the black dashed-dotted curves (KR). . . . .	54
2.11	Intercomparison of excitation functions of $^{100}Pd$ for $^{12}C$ , $^{14}N$ , and $^{16}O+^{103}Rh$ systems. Theoretical calculations with the HMS model are shown by the solid red curves (OB), the dashed blue curves (FG), and the black dashed-dotted curves (KR). . . . .	55
2.12	Level density of the $^{103}Rh$ isotope as a function of excitation energy for $l = 0$ for different options as indicated. . . . .	56
3.1	Comparison of the experimentally obtained neutron efficiency (solid circles) with the same obtained using Monte Carlo simulation code NEFF (solid line). . . . .	64
3.2	Typical plot of pulse shape discrimination (PSD) signal versus time-of-flight (TOF) signal. . . . .	65
3.3	Neutron emission differential cross sections for 130 MeV $^{19}F$ on $^{181}Ta$ target. The solid symbols are the experimental results of this work. The calculated cross sections are shown as a solid red curve (OB level density) and dash-dotted green curve (KRK level density) as obtained with the nuclear reaction code ALICE2014 and dashed blue curve as obtained from PACE4. The estimated errors are smaller than the experimental scatter point size. . . . .	68
3.4	Neutron emission differential cross sections for 140 MeV $^{19}F$ on $^{181}Ta$ target. The other details are the same as in Fig. 3.3. . . . .	69
3.5	Neutron emission differential cross sections for 145 MeV $^{19}F$ on $^{181}Ta$ target. The other details are the same as in Fig. 3.3. . . . .	70
3.6	Neutron emission differential cross sections for 150 MeV $^{19}F$ on $^{181}Ta$ target. The other details are the same as in Fig. 3.3. . . . .	71
3.7	Neutron emission differential cross sections for 130 MeV $^{19}F$ on $^{89}Y$ target. The other details are the same as in Fig. 3.3. . . . .	72

3.8	Neutron emission differential cross sections for 140 MeV $^{19}\text{F}$ on $^{89}\text{Y}$ target. The other details are the same as in Fig. 3.3. . .	73
3.9	Neutron emission differential cross sections for 145 MeV $^{19}\text{F}$ on $^{89}\text{Y}$ target. The other details are the same as in Fig. 3.3. . .	74
3.10	Neutron emission differential cross sections for 150 MeV $^{19}\text{F}$ on $^{89}\text{Y}$ target. The other details are the same as in Fig. 3.3. . .	75
3.11	Neutron emission differential cross sections for 130 MeV $^{19}\text{F}$ on $^{51}\text{V}$ target. The other details are the same as in Fig. 3.3. .	76
3.12	Neutron emission differential cross sections for 140 MeV $^{19}\text{F}$ on $^{51}\text{V}$ target. The other details are the same as in Fig. 3.3. .	77
3.13	Neutron emission differential cross sections for 145 MeV $^{19}\text{F}$ on $^{51}\text{V}$ target. The other details are the same as in Fig. 3.3. .	78
3.14	Neutron emission differential cross sections for 150 MeV $^{19}\text{F}$ on $^{51}\text{V}$ target. The other details are the same as in Fig. 3.3. .	79
3.15	Neutron angular distribution at various emission energies for $^{19}\text{F}$ (150 MeV) + $^{181}\text{Ta}$ . PACE4 (dotted blue curve), ALICE2014 (KRK) (dashed green curve), ALICE2014 (OB) (solid red curve), and present experimental results (solid black points with error bars). . . . .	80
3.16	Neutron angular distribution at various emission energies for $^{19}\text{F}$ (150 MeV) + $^{89}\text{Y}$ . The other details are the same as in Fig. 3.15. . . . .	81
3.17	Neutron angular distribution at various emission energies for $^{19}\text{F}$ (150 MeV) + $^{51}\text{V}$ . The other details are the same as in Fig. 3.15. . . . .	82
3.18	The energy integrated angular distribution for emitted neutrons for various targets at 150 MeV beam energy. The other details are the same as in Fig. 3.15. . . . .	83
4.1	Experimental double differential $\alpha$ -particle spectra for the interaction of $^{14}\text{N}$ with $^{59}\text{Co}$ at incident energy of 250 MeV. .	96
4.2	Experimental double differential $\alpha$ -particle spectra for the interaction of $^{14}\text{N}$ with $^{93}\text{Nb}$ at incident energy of 250 MeV. .	96
4.3	Comparison between experimental and theoretical double differential $\alpha$ -particle energy spectra for the interaction of $^{14}\text{N}$ with $^{59}\text{Co}$ at an incident energy of 250 MeV at various angles. Solid spheres (black) are experimental data points which include error bars and the results of modified PACE4 are shown as solid curve (red). . . . .	98

4.4	Comparison between present experimental double differential $\alpha$ -particle energy spectra for the interaction of $^{14}\text{N}$ with $^{59}\text{Co}$ at 250 MeV (solid symbols) and modified PACE4 (solid lines). . . . .	99
4.5	Comparison between experimental and theoretical double differential $\alpha$ -particle energy spectra for the interaction of $^{14}\text{N}$ with $^{93}\text{Nb}$ at an incident energy of 250 MeV at various angles. Solid spheres (black) are experimental data points which include error bars and the results of modified PACE4 are shown as solid curve (red). . . . .	100
4.6	Comparison between present experimental double differential $\alpha$ -particle energy spectra for the interaction of $^{14}\text{N}$ with $^{93}\text{Nb}$ at at 250 MeV (solid symbols) and modified PACE4 (solid lines). . . . .	101
4.7	Experimental angular distribution of $\alpha$ -particles emitted in the interaction of $^{14}\text{N}$ with $^{59}\text{Co}$ at 250 MeV. . . . .	102

# List of Tables

2.1	Energy degradation at each foil for incident beam energy of 250 MeV . . . . .	26
2.2	Energy degradation at each foil for incident beam energy of 400 MeV . . . . .	28
2.3	$^{152}\text{Eu}$ gamma ray energies, their abundances and uncertainties	31
2.4	Identified isotopes, half-lives and spin, energies and abundancies of the characteristic gamma lines . . . . .	33
2.5	Measured cross sections of $^{103}\text{Ag}$ , $^{104}\text{Ag}$ , $^{105}\text{Ag}$ , $^{104}\text{Cd}$ , $^{99}\text{Pd}$ residues formed in the interaction of $^{14}\text{N}$ with $^{103}\text{Rh}$ upto 400 MeV . . . . .	40
2.6	Measured cross sections of $^{100}\text{Pd}$ , $^{101}\text{Pd}$ , $^{97}\text{Rh}$ , $^{99}\text{Rh}$ , $^{101}\text{Rh}$ residues formed in the interaction of $^{14}\text{N}$ with $^{103}\text{Rh}$ upto 400 MeV . . . . .	41
2.7	Measured cross sections of $^{95}\text{Ru}$ , $^{97}\text{Ru}$ , $^{94}\text{Tc}$ , $^{95}\text{Tc}$ , $^{96}\text{Tc}$ residues formed in the interaction of $^{14}\text{N}$ with $^{103}\text{Rh}$ upto 400 MeV .	42
