

List of tables

| | |
|--|-----|
| Table 1 Diversity of quorum sensing circuits and quorum sensing regulated functions in various bacteria | 8 |
| Table 2 AHL acylases in various bacteria | 19 |
| Table 3 AHL lactonase in various bacteria | 22 |
| Table 4 Diversity of microbial biocontrol agents and mechanism involved in biocontrol | 30 |
| Table 5 Identification of six selected isolates based on 16S rDNA sequencing | 44 |
| Table 6 Root colonisation ability of <i>Bacillus</i> isolates on mung bean | 64 |
| Table 7 <i>In planta</i> biocontrol of spoilage of bean sprouts caused by <i>PccBR1</i> using AHL degrading <i>Bacillus</i> isolates | 65 |
| Table 8 Bacterial strains and plasmids used for cloning and expression | 73 |
| Table 9 Bacterial strains and plasmids used for infection and CSLM | 102 |
| Table 10 Viable count of <i>P. aeruginosa</i> PAO1 and <i>P. aeruginosa</i> PAO1 (<i>lasI</i> - <i>rhlI</i> -) on mung bean sprouts and roots | 110 |
| Table 11 Mortality rates in different mung bean infection plant trials in <i>P. aeruginosa</i> PAO1 and <i>P. aeruginosa</i> PAO1 (<i>lasI</i> - <i>rhlI</i> -) treated sprouts | 111 |
| Table 12 Viable count of <i>P. aeruginosa</i> PAO1 and <i>Lysinibacillus</i> sp. Gs50 on mung bean sprouts and roots during the course of infection | 118 |
| Table 13 Mortality rate of sprouts treated with <i>P. aeruginosa</i> PAO1 alone and co-inoculated with <i>P. aeruginosa</i> PAO1 and <i>Lysinibacillus</i> sp. Gs50 | 119 |
