CHAPTER	PAGE NO.
LIST OF FIGURES	i-ii
LIST OF TABLES	iii
LIST OF ABBREVIATIONS	iv-vi
ABSTRACT	vii-viii
1. INTRODUCTION	1 – 9
2. REVIEW OF LITERATURE	10-38
2.1 Rice blast disease	
2.2 Rice blast fungus as a model system to study plant pathogen interaction	
2.3 The sexual reproduction of <i>M. oryzae</i>	
2.4 The asexual reproduction and infection cycle of rice blast	
2.5 Root infection by <i>M. oryzae</i>	
2.6 Signaling pathways in <i>M. oryzae</i>	
2.7 Genome architecture of <i>M. oryzae</i>	
2.8 Posttranslational modifications (PTMs)	
2.9 Sumoylation Pathway	
2.10 Substrate specificity in sumoylation	
2.11 Functional consequences of SUMO modification	
2.12 SUMO in signal transduction pathways	
2.13 Sumoylation and diseases	
2.14 Role for sumoylation in abiotic stress	
2.15 Role of SUMO in mitosis	
2.16 Cross-talk between sumoylation and other post-translational modifications	

- 3.1 Media and culture conditions
- 3.2 Bacterial strains
- 3.3 Yeast strains
- 3.4 Fungal cultures
- 3.5 Competent cell preparation and transformation of *E. coli* with plasmid DNA
- 3.6 Transformation of *S. cerevisiae* with plasmid DNA
- 3.7 Isolation of plasmid DNA
- 3.8 Nucleic acid manipulations
- 3.9 Blastp, multiple sequence alignment and phylogram generation
- 3.10 Protoplast transformation
- 3.11 Generation of yeast expression vectors of *MoSUMO* and mutated diglycine *MoSUMO_{gg}* for *S. cerevisiae*
- 3.12 Generation of knock-out, complementation and localization construct of *MoSUMO*
- 3.13 DNA extraction and Southern blot analysis
- 3.14 Total RNA extraction and RT-PCR (Reverse Transcriptase Polymerase Chain Reaction)
- 3.15 Heterologous expression of recombinant MoSUMO Protein in *E. coli*
- 3.16 Production of polyclonal antibodies against MoSUMO
- 3.17 Protein extraction and western hybridization analysis
- 3.18 Immunostaining
- 3.19 Assays of growth, conidiation and appressorium development
- 3.20 Statistical analysis
- 3.21 Plant infection assay and penetration assay
- 3.22 Microscopy Methods
- 3.23 Two dimensional polyacrylamide gel electrophoresis (2DGE)
- 3.24 Isolation and identification of protein spots from 2DGE
- 3.25 Isolation of enriched sumoylated proteins

4.1 Bioinformatics analysis

4.2 Complementation of *SMT3 (SUMO)* mutant of *S. cerevisiae* with *MoSUMO*4.3 Site directed mutagenesis of MoSUMO diglycine motif and its expression in *S. cerevisiae*4.4 Molecular characterization of $\Delta Mosumo$ mutant and complementation strain4.5 Phenotypic characterization of $\Delta Mosumo$ mutant and $\Delta Mosumo/MoSUMO$ complemented strain

4.5.1 Growth

4.5.2 Conidiation

4.5.3 Appressorium development

4.5.4 Infection assay

4.5.5 Penetration assay using rice leaf sheath

4.6 Depletion of *MoSUMO* causes defective nuclear segregation and septation4.7 $\Delta Mosumo$ mutant exhibits aberrant chitin deposition in developmental stages of conidia4.8 Heterologous protein expression in *E.coli* and raising the antibody against MoSUMO

4.9 Immunoblot analysis

4.10 Subcellular localization of MoSUMO by indirect immunolocalization

4.11 Characterization of MoSUMO localization transformant

4.12 Subcellular localization and live cell imaging of MoSUMO

4.13 Co-localization of MoSUMO at nuclear and septal regions

4.14 Co-localization of MoSUMO and actin protein

4.15 Global protein expression of MoSUMO in wild type B157 and $\Delta Mosumo$

4.16 Identification of isolated proteins from 2DGE by MALDI-TOF

4.17 Enrichment of sumoylated proteins of *M. oryzae*

5. DISCUSSION	115-127
6. SUMMARY	128-133
BIBLIOGRAPHY	i-xxvii
