

## List of Figures

<b>Fig No.</b>	<b>Figure Titles</b>	<b>Page No.</b>
<b>Fig. 1.1</b>	Rhizodeposition root zones in the rhizosphere	5
<b>Fig. 1.2</b>	Positive and negative interactions among rhizobacteria and plants	7
<b>Fig. 1.3</b>	Cross-talk in the rhizosphere and step wise the molecular interactions involved during the establishment of PGPR strains in the rhizosphere	8
<b>Fig. 1.4</b>	Model for suppression of root pathogens by siderophores of fluorescent <i>Pseudomonas</i>	13
<b>Fig. 1.5</b>	Chemical structures of antifungal metabolites produced by fluorescent pseudomonads	18
<b>Fig. 1.6</b>	Overview of interactions between biocontrol strains, plants, pathogens, predators, co-operators and soil.	21
<b>Fig. 2.1</b>	General strategy used for the isolation of biocontrol strains.	36
<b>Fig. 2.2</b>	Phylogenetic tree of <i>Pseudomonas</i> spp	37
<b>Fig. 2.3</b>	Location of sample collection sites on Gujarat map.	39
<b>Fig. 2.4</b>	Enrichment technique for the isolation of efficient root colonizing fluorescent pseudomonads	42
<b>Fig. 2.5</b>	Schematic representation of the steps in PCR amplification of ITS.	47
<b>Fig. 2.6</b>	Representative plants from the enrichment assay.	56
<b>Fig. 2.7</b>	Representative strains of isolated fluorescent pseudomonads on Kings B plates.	56
<b>Fig. 2.8</b>	Antifungal activity against <i>R. bataticola</i> by representative fluorescent isolates.	57
<b>Fig. 2.9</b>	Radar plot for the inhibition of <i>Rhizoctonia bataticola</i> by fluorescent bacterial isolates.	57
<b>Fig. 2.10</b>	Representative diagram of P-solubilization by isolates.	60
<b>Fig. 2.11</b>	Representative fluorescent isolates showing siderophore production on CAS plates.	62
<b>Fig. 2.12</b>	Siderophore production by fluorescent bacterial isolates.	62

<b>Fig. 2.13</b>	Genomic DNA of representative fluorescent bacterial isolates.	64
<b>Fig. 2.14</b>	Amplification of fluorescent pseudomonads specific ITS (560bp) in the bacterial isolates.	65
<b>Fig. 2.15</b>	IAA production by fluorescent <i>Pseudomonas</i> isolates.	67
<b>Fig. 2.16</b>	Bioassay using <i>R. bataticola</i> and <i>S. aureus</i> by fluorescent <i>Pseudomonas</i> isolates.	70
<b>Fig. 2.17</b>	ACC deaminase activity of representative fluorescent <i>Pseudomonas</i> Strains	72
<b>Fig. 2.18</b>	Precipitate formation method for the KMBA pathway in fluorescent pseudomonads	73
<b>Fig. 2.19</b>	HCN production by fluorescent <i>Pseudomonas</i> strains.	75
<b>Fig. 2.20</b>	ITS-RFLP patterns of fluorescent <i>Pseudomonas</i> strains using <i>Hae III</i> .	76
<b>Fig. 2.21</b>	Dendrogram of fluorescent pseudomonad strains based on ITS-RFLP.	76
<b>Fig. 3.1</b>	Genetic organization of 2, 4-DAPG, Pyoluteorin, HCN, Phenazine and Pyrrolnitrin biosynthesis genes.	85
<b>Fig. 3.2</b>	Biosynthetic pathway and genes involved for the biosynthesis of phenazines.	88
<b>Fig. 3.3</b>	Biosynthesis of PRN and PHZ from shikimic acid in strain PA23-63.	89
<b>Fig. 3.4</b>	Biotic and abiotic factors influencing DAPG production.	92
<b>Fig. 3.5</b>	General characteristics of the Gac/Rsm signal transduction pathway in $\gamma$ -proteobacteria.	96
<b>Fig. 3.6</b>	Global regulatory pathway for the 2, 4-DAPG, Phz and HCN biosynthesis regulation.	98
<b>Fig. 3.7</b>	Model for the regulatory cascade governing PCN production in <i>P. chlororaphis</i> PCL1391.	99
<b>Fig. 3.8</b>	PCR amplification of <i>phlD</i> gene in fluorescent <i>Pseudomonas</i> strains.	113
<b>Fig. 3.9</b>	PCR amplification of <i>hcnBC</i> gene from fluorescent <i>Pseudomonas</i> strains.	114
<b>Fig. 3.10</b>	PCR amplification of <i>pltC</i> gene from fluorescent <i>Pseudomonas</i> strain	114
<b>Fig. 3.11</b>	PCR amplification of <i>prnC</i> gene from fluorescent <i>Pseudomonas</i> strains	115

<b>Fig. 3.12</b>	Pie graph for the number of ITS, <i>phlD</i> , <i>pltC</i> , <i>hcnBC</i> and <i>prnC</i> positive strains.	117
<b>Fig. 3.13</b>	Distribution of antibiotic synthesis genes among fluorescent <i>Pseudomonas</i> strains.	117
<b>Fig. 3.14</b>	HPLC profile of pure DAPG.	118
<b>Fig. 3.15</b>	HPLC profile of 2,4-DAPG extracted from <i>PfCHA0</i>	119
<b>Fig. 3.16:</b>	HPLC profile for 2,4-DAPG production by fluorescent <i>Pseudomonas</i> isolates.	119
<b>Fig. 3.17</b>	2,4-DAPG production by fluorescent pseudomonad under different carbon sources.	122
<b>Fig. 3.18</b>	Relatedness of fluorescent <i>Pseudomonas</i> isolates based on 2, 4- DAPG production under different C-sources.	123
<b>Fig. 3.19</b>	Influence of phosphate levels on DAPG production in fluorescent <i>Pseudomonas</i> .	124
<b>Fig. 3.20</b>	TLC for the separation and detection of PRN spot in the extract.	125
<b>Fig. 3.21</b>	Mechanism of MnO <sub>2</sub> reduction.	128
<b>Fig. 3.22</b>	MnO <sub>2</sub> reduction by representative fluorescent <i>Pseudomonas</i> isolates	129
<b>Fig. 3.23</b>	Clearance observed due to reduction of MnO <sub>2</sub> precipitates in the presence of phenazine.	130
<b>Fig. 3.24</b>	Quantification of phenazine production by fluorescent <i>Pseudomonas</i> isolates.	132
<b>Fig. 3.25</b>	Inhibition of <i>R.bataticola</i> by fluorescent <i>Pseudomonas</i> strains on MBV1-agar plates.	133
<b>Fig. 3.26</b>	Inhibition of <i>R.bataticola</i> by PCN extracts of Isolate G44 grown on different nitrogen sources.	134
<b>Fig. 3.27</b>	Fungal growth inhibition by G44 under 8mM and 16mM casamino acids supplemented in MVB1-glucose-CAS.	135
<b>Fig. 3.28</b>	Growth Inhibition of <i>R.bataticola</i> by PCN extracts of Isolate G44 grown on different C sources.	137
<b>Fig. 3.29</b>	Inhibition by PCN extract of MVB1 supplemented with NH <sub>4</sub> Cl and glycerol.	137
<b>Fig. 3.30</b>	UV absorption maxima for PCN extracts of Isolate G44 on different carbon	

	and nitrogen sources.	138
<b>Fig. 3.31</b>	Inhibition of <i>R. bataticola</i> by pure antibiotic std., ethyl acetate extracts of <i>Pf</i> CHA0 grown in various nutritional combinations on 2d and 5d	143
<b>Fig. 3.32</b>	Effect of nutritional factors and their combinations on <i>Pf</i> CHA0 antifungal activity at 2d and 5d	144
<b>Fig. 3.33</b>	Contribution of nutritional factors to <i>Pf</i> CHA0 antifungal activity at 2d and 5d.	144
<b>Fig. 3.34</b>	Effect of nutritional factors and their combinations on <i>Pf</i> CHA0 growth (OD 600nm) at 2d and 5d.	145
<b>Fig. 3.35</b>	Contribution of nutritional factors to OD600nm at 2d and 5d.	145
<b>Fig. 3.36</b>	Effect of nutritional factors and their combinations on PRN production at 2d and 5d.	149
<b>Fig. 3.37</b>	Contribution of factors to PRN production at 2d and 5d	149
<b>Fig. 3.38</b>	Effect of nutritional factors and their combinations on PLT production at 2d and 5d.	150
<b>Fig. 3.39</b>	Contribution of factors to the effect of factors on PLT production at 2d and 5d	150
<b>Fig. 3.40</b>	Effect of nutritional factors and their combinations on DAPG production at 2d and 5d	151
<b>Fig. 3.41</b>	Contribution of factors to DAPG production at 2d and 5d	151
<b>Fig. 3.42</b>	Contributions of PRN, PHL and PLT to the 2 d and 5 d antifungal activity	153
<b>Fig. 3.43</b>	Principal Component Analysis (PCA) for the effect of nutritional factors on antibiotic production and antifungal activity of <i>Pf</i> CHAO.	154
<b>Fig. 3.44</b>	Antifungal activity by G20 extract under different nutrient compositions	156
<b>Fig. 3.45</b>	Radar graph for antifungal activity by G20 at 2 d and 5 d under different nutrient combinations.	156
<b>Fig. 4.1</b>	Evolutionary distance between standard rhizobial strains used in this study	177
<b>Fig. 4.2</b>	Schematic representation of the plate assay for the triple interaction of rhizobia, fluorescent pseudomonads and <i>R. bataticola</i> .	184
<b>Fig. 4.3</b>	Effect of pure antibiotics on rhizobia	186

<b>Fig. 4.4</b>	Dual culture interaction of model fluorescent <i>Pseudomonas</i> and rhizobia	188
<b>Fig. 4.5</b>	Inhibition of rhizobial strains by the ethyl acetate extracts of fluorescent <i>Pseudomonas</i> strains	190
<b>Fig. 4.6</b>	Clustering of fluorescent <i>Pseudomonas</i> strains based on their inhibitory effect to rhizobial strains.	191
<b>Fig. 4.7</b>	Clustering of rhizobial strains based on their inhibition pattern by fluorescent <i>Pseudomonas</i> strains.	191
<b>Fig. 4.8</b>	Inhibition of rhizobium spp by antibiotic extraction from different DAPG mediums by Pf CHA0 and G20.	192
<b>Fig. 4.9</b>	Inhibition of rhizobia by Pf CHA0 antibiotic extracts from culture supernatants from the biocontrol supportive media (A&B)	194
<b>Fig. 4.10</b>	Inhibition of rhizobia by antibiotic extracts of fluorescent <i>Pseudomonas</i> strains from cultures grown under biocontrol supportive nutrient combinations	194
<b>Fig. 4.11</b>	Interaction of fluorescent <i>Pseudomonas</i> and rhizobia in presence of <i>R.bataticola</i> .	196
<b>Fig 5.1</b>	Plant growth promotion effect of fluorescent pseudomonads on <i>Vigna radiata</i> under synthetic MS medium.	211
<b>Fig. 5.2</b>	Effect of fluorescent pseudomonads on <i>Vigna radiata</i> growth	211
<b>Fig. 5.3</b>	Effect of fluorescent pseudomonads on root /shoot dry weight of <i>Vigna radiata</i>	212
<b>Fig. 5.4</b>	Seed germination assay for protection against fungus <i>R. bataticola</i> .by fluorescent pseudomonad strains	213
<b>Fig. 5.5</b>	Plant assay for the protection of <i>Vigna radiata</i> by fluorescent pseudomonads against <i>R.bataticola</i> .	213
<b>Fig. 5.6</b>	Pot study for the effect of ST1,Pf CHA0 and <i>E.asburiae</i> PSI3 on <i>Cajanaus cajan</i> .	216
<b>Fig. 5.7</b>	Plant growth promotion effect of ST1, Pf CHA0 and <i>E.asburiae</i> PSI3 on <i>Cajanaus cajan</i>	216
<b>Fig. 5.8</b>	Pot study for the effect of ST1, Pf CHA0 and <i>E.asburiae</i> PSI3 on <i>Cajanaus</i>	

	<i>cajan.</i>	217
<b>Fig. 5.9</b>	Plant growth promotion effect of IC3109, <i>Pf</i> CHA0 and <i>E.asburiae</i> PSI3 on <i>Cajanaus cajan.</i>	217
<b>Fig. 5.10</b>	Pot study for the effect of IC3123, <i>Pf</i> CHA0 and <i>E.asburiae</i> PSI3 on <i>Cajanaus cajan.</i>	218
<b>Fig. 5.11</b>	Plant growth promotion effect of IC3123, <i>Pf</i> CHA0, <i>E.asburiae</i> PSI3 on <i>Cajanus cajan.</i>	218
<b>Fig. 5.12</b>	Histogram for the effect of PGP strains on root length.	219
<b>Fig. 5.13</b>	Box plot for the effect of different combination of PGP strains on root length.	219
<b>Fig. 5.14</b>	Histogram for the effect of PGP strains on shoot length.	219
<b>Fig. 5.15</b>	Box plot for the effect of different combination of PGP strains on shoot length.	219
<b>Fig. 5.16</b>	Effect of fluorescent pseudomonad strains under biocontrol supporting nutritional combinations	221
