

(iv)

LIST OF FIGURES

1. Distribution of skewness (γ_1) and excess (γ_2) parameters for $(2s-1d)^8$ configurations.
2. Proton occupancy vs neutron number for (a) $p_{3/2}$, (b) $p_{1/2}$ and (c) $g_{9/2}$ orbits of various nuclei.
3. Occupancies vs Nuclei; comparison of experimental and calculated results for (a) $p_{3/2}$, (b) $f_{5/2}$ and $g_{9/2}$ orbits.
4. Domain of validity of any distribution γ_1, γ_2 plane.
5. Comparison of various representations with the shell model results. Dimensionality $D = 168$
6. Comparison of various representations with the shell model results. Dimensionality $D = 495$
7. The relationship between the stretching parameter b and the dimensionality D of an eigenvalue distribution.
8. Fluctuations Δ_i in the eigenvalues vs the eigenvalue number for 109 eigenvalues, obtained using (a) γ_1, γ_2 correction and (b) CF expansion.
9. Fluctuations Δ_i in the eigenvalues, obtained using (a) γ_1, γ_2 correction and (b) CF expansion. $D = 167$
10. The spherical orbit occupancies vs energy compared with (a) the exact results and (b) the results obtained by representing the density function by a gaussian, for the $d_{5/2}$ and $d_{3/2}$ orbits in $(2s-1d)^{m=5}$, $T=1/2$ space with

(v)

D = 109.

11. The lognormal line.

12. The Pearson's system of curves in the γ_1, γ_2 plane.
