

List of Figures

Figure 1.1 Displays allotropes of Carbon a) Graphite b) Diamond c) Carbon nanotubes d) Buckyball- Fullerene	4
Figure 1.2 2D Graphene sheet composed of hexagonal rings compactly placed next to each other. Black small balls represent carbon atoms.	7
Figure 1.3 The arrangement of electrons and their relative spin in elemental carbon (left) and in graphene (right) shows the s and two of the p orbitals of the second shell interact covalently to form three sp^2 hybrid orbitals. Bottom figure displays the sp^2 hybridization model [1].....	7
Figure 1.4 A direct lattice of SLG sheet (green) with carbon atoms in blue. The Bravais lattice consists of two atoms per unit cell A,B (Yellow). This unit cell i.e. the primitive cell is a parallelogram (dashed blue lines) with primitive vectors \mathbf{a}_1 and \mathbf{a}_2 and interstitial distance between two carbon atoms A and B being $a = 1.42 \text{ \AA}$ (redrawn with reference to the concept from [1])	8
Figure 1.5 Hexagonal Brillouin zone - the reciprocal lattice of Graphene sheet with vectors b_1 and b_2 . The Brillouin zone is cornered at \mathbf{K} points famously known as Dirac points.	9
Figure 1.6 Dirac Cone with Dirac point (E_f) at the centre depicting the linear dispersion relation of Graphene and x,y,z representing three axis of the cone.....	10
Figure 1.7 Tight Binding band structure of Graphene depicting linear behaviour at \mathbf{K} points [3] ...	10
Figure 1.8 Displays a) position of carbon atoms in Bilayer graphene b) Band Structure of Bilayer Graphene [1].....	14
Figure 1.9 3D Band structure of Gapped graphene. Moving from front to back the value of Δ (gap) decreases, changing the shape of band structure from parabola to linear.	15
Figure 1.10 Alternate layers of graphene (green) and SiO_2 (yellow) with a period of width L , resembling the quantum well (below) structure	17
Figure 1.11 Infinite series of Feynman diagrams corresponding to the RPA for $\chi_{nn}(q,\omega)$ [32]	25
Figure 2.1 Plot of $S(x,y)$ At $x=1$. Solid curve A for doped graphene and dotted curve B for undoped graphene.....	65
Figure 2.2 Plot of $S(x)$ vs x : Solid curve A for doped graphene and dotted curve B for undoped graphene.....	66
Figure 2.3 Static dimensionless long wavelength limit regularised analytical structure factor, SAR_x vs x , sans LFC, plotted in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.	68
Figure 2.4 Static dimensionless regularised structure factor, SR_x vs x , with LFC, plotted in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively	69
Figure 2.5 Static dimensionless regularised structure factor, SR_x vs x , sans LFC, plotted in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$, & 4, respectively.	70
Figure 2.6 Magnetic static dimensionless regularised structure factor, SR_x vs x , with LFC, plotted in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	71
Figure 2.7 Spin symmetric dimensionless regularised pair correlation function, g_{kFr} vs kFr , with LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	73
Figure 2.8 Spin symmetric dimensionless regularised pair correlation function, g_{kFr} vs kFr , sans LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	74
Figure 2.9 Parallel spin dimensionless regularised pair correlation function, $g_{\uparrow\uparrow kFr}$ vs kFr , with LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	75
Figure 2.10 Parallel spin dimensionless regularised pair correlation function, $g_{\uparrow\uparrow kFr}$ vs kFr , sans LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	76
Figure 2.11 Anti parallel spin dimensionless regularised pair correlation function, $g_{\uparrow\downarrow kFr}$ vs kFr , with LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	77
Figure 2.12 Anti parallel spin dimensionless regularised pair correlation function, $g_{\uparrow\downarrow kFr}$ vs kFr , sans LFC, in the curves A, B, C & D, for dimensionless coupling constants $\alpha = 1, 2, 3$ & 4, respectively.....	78

Figure 2.13 Normalized screened self energy, $E_{sl}(k)/e2kf$ is plotted against normalized wave vector k/k_f . Solid Curve displays Self energy of graphene while dashed curve is for 2DEG, without LFC.	80
Figure 2.14 Normalized screened self energy, $E_{sl}/e2kf$ as a function of k/k_f without LFC (solid line curve) with LFC (dashed line curve).	81
Figure 2.15 Screened self energy for BLG $E_{sl}(k)/e2kf$ versus x Curve-A is for $n = 10^{14} \text{cm}^{-2}$ while Curve-B is for $n = 5 \times 10^{13} \text{cm}^{-2}$	82
Figure 2.16 Density of screening charge plotted against k/r for $n = 4.77 \times 10^{14} \text{cm}^{-2}$ at $\alpha = 2$ (Curve-A) and for $\alpha = 4$ (curve-B).	85
Figure 2.17 Density of screening charge $n_s(r)/Zekf2$ plotted against k/r for SLG for $\alpha = 4$ at $n = 8.04 \times 10^{14} \text{cm}^{-2}$ (curve-B) and $n = 4.77 \times 10^{14} \text{cm}^{-2}$ (curve-A).	86
Figure 2.18 Density of screening charge $n_s(r)/Zekf2$ with LFC (dashed line) and without LFC (solid line) for $\alpha = 4$ at $n = 8.04 \times 10^{14} \text{cm}^{-2}$	87
Figure 2.19 Density of screening charge $n_s(r)/Zekf2$ versus k/r for BLG Curve-A is for $n = 10^{14} \text{cm}^{-2}$ while Curve-B is for $n = 5 \times 10^{13} \text{cm}^{-2}$	88
Figure 2.20 Screened potential $V_{SCRr} \rightarrow k/r$; with LFC(dashed line), without LFC (solid line)....	89
Figure 2.21 Screened Potential V_{SCRr} versus k/r for BLG for $n = 10^{14} \text{cm}^{-2}$	90
Figure 2.22 Pair distribution function $g(r, z) \rightarrow z$ for $\alpha = 1$ solid line, $\alpha = 2$ dotted line and $\alpha = 3$ (dashed line).	91
Figure 3.1 Static (above) and dynamic (below) polarization function of gapped graphene [11].	111
Figure 3.2 Dynamic Structure Factor $S(x, y) \rightarrow y$ for $x=0.5$ and gap $b = \Delta\epsilon f = 0.5$ for $\alpha = 1.0, 4.0$	112
Figure 3.3 Static Structure Factor $S(x) \rightarrow x$ for $\alpha = 2.0$. Solid line (unregularized) Dashed line (regularized).	113
Figure 3.4 Static Structure Factor $S(x) \rightarrow x$ for $\alpha = 4.0$. Solid line (unregularized) Dashed line (regularized).	113
Figure 3.5 Energy Loss dw/dt (in units of $2Z2e2Ef2/\kappa\hbar2vf$) as a function of Hkf . Solid lines (Thick $\rightarrow \Delta\epsilon f = 1.5$; Thin $\rightarrow \Delta\epsilon f = 0.5$) $\alpha = 3$; Dotted ($\Delta\epsilon f = 1.5$) and Dashed lines ($\Delta\epsilon f = 0.5$) for $\alpha = 1$ dotted for the velocity to fermi velocity ratio $\mathbf{v}v\mathbf{f} = 1.0$	115
Figure 3.6 Energy Loss dw/dt (in units of $2Z2e2Ef2/\epsilon0\hbar2vf\pi$) as a function of Hkf . Solid lines (Thick $\rightarrow \Delta\epsilon f = 1.5$; Thin $\rightarrow \Delta\epsilon f = 0.5$) $\alpha = 3$; Dotted ($\Delta\epsilon f = 1.5$) and Dashed lines ($\Delta\epsilon f = 0.5$) for $\alpha = 1$ dotted for the velocity to fermi velocity ratio $\mathbf{v}v\mathbf{f} = 1.0$	116
Figure 3.7 Energy Loss dw/dt (in units of $2Z2e2Ef2\epsilon0\hbar2vf\pi$) as a function of Hkf . Solid lines $\mathbf{v}v\mathbf{f} = 1.0$; Dotted $\mathbf{v}v\mathbf{f} = 2.0$; Dashed $\mathbf{v}v\mathbf{f} = 3.0$; $\Delta\epsilon f = 0.5$ and $\alpha = 3$	117
Figure 3.8 Numerical results for energy loss $dWdt \rightarrow Hkf$ obtained using eq. 3.34, using full polarization of gapped graphene, for different values of Gap $\Delta\epsilon f = b$. Inset shows $dWdt \rightarrow Hkf$ for $\Delta\epsilon f = 1.5$. The $dWdt$ has been obtained in the units of $2Z2e2Ef2\epsilon0\hbar2vf\pi$	118
Figure 3.9 Energy Loss dw/dt (in units of $2Z2e2Ef2\epsilon0\hbar2vf\pi$) as a function of $\mathbf{v}v\mathbf{f}$ plotted using eq. (3.59), for various values of $b = 0.1, 0.5, 1.0, 1.5$ and $\alpha = 1$	120
Figure 3.10 Energy Loss dw/dt (in units of $2Z2e2Ef2\epsilon0\hbar2vf\pi$) as a function of $\mathbf{v}v\mathbf{f}$ plotted using eq. (3.59), for various values of $b = 0.1, 0.5, 1.0, 1.5$ and $\alpha = 3$	121
Figure 3.11 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. 3.61, for velocity $\mathbf{v}v\mathbf{f} = 2.0 = u$; $n = 7.9524 \times 10^{12} \text{cm}^{-2}$ and $\alpha = 1.0$	124
Figure 3.12 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. 3.61, for velocity $\mathbf{v}v\mathbf{f} = 1.0 = u$; $n = 7.9524 \times 10^{12} \text{cm}^{-2}$ and $\alpha = 1.0$	125
Figure 3.13 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. (3.64), for velocity $u = 4.0$; $n = 7.9524 \times 10^{14} \text{cm}^{-2}$ and $\alpha = 3.0$	127
Figure 3.14 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. (3.64), for velocity $u = 4.0$; $n = 7.9524 \times 10^{14} \text{cm}^{-2}$ and $\alpha = 1.0$	128
Figure 3.15 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. (3.64), for velocity $u = 2.0$; $n = 7.9524 \times 10^{14} \text{cm}^{-2}$ and $\alpha = 1.0$	129
Figure 3.16 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. (3.64), for velocity $u = 2.0$; $n = 7.9524 \times 10^{12} \text{cm}^{-2}$ and $\alpha = 1.0$	130
Figure 3.17 Induced charge density n_{grn} in the units of $Z\pi$ Plotted against particle position $rkf = R$ using eq. (3.51), for velocity $u = 1, 0, 4.0$; $n = 7.9524 \times 10^{12} \text{cm}^{-2}$ and $\alpha = 1.0$ for gap values $b = 0.5$ and 1.5	131
Figure 4.1 Plasmon-Phonon coupled modes for $n = 10^{12} \text{cm}^{-2}$ and $d = 400 \text{\AA}$	144

Figure 4.2 Analytical results of Plasmon-Phonon coupled modes, solid curve corresponds to $n = 10^{12} \text{cm}^{-2}$ while dotted line corresponds to $n = 10^{14} \text{cm}^{-2}$ for $d = 400 \text{\AA}$. Inset curves are upto $q < 0.2kf$	145
Figure 4.3 Plasmon-Phonon coupled modes obtained using full polarization for $d = 400 \text{\AA}$, 10^{12}cm^{-2} dashed curve 10^{14}cm^{-2} solid curve. Inset shows coupled modes $q < 0.1kf$	146
Figure 4.4 Plasmon-Phonon coupled modes for $d = 800 \text{\AA}$ (dashed curve) and $d = 400 \text{\AA}$ (solid curve) for $n = 10^{12} \text{cm}^{-2}$. Inset curves are upto $q < 0.2kf$	147
Figure 4.5 Numerical results for Plasmon-Phonon coupled modes, dashed curve corresponds to $d = 400 \text{\AA}$ while solid line corresponds to $d = 800 \text{\AA}$ for $n = 10^{12} \text{cm}^{-2}$. Inset curves are upto $q < 0.5kf$	148
Figure 4.6 Plasmon-Phonon coupling mode for weak coupling. Dashed curves displays $\omega +$ and $\omega -$ modes. Uncoupled modes are shown by ω_{LO} , ω_{TO} (Dotted curves), while solid curve displays plasmon mode ω_q without plasmon-phonon coupling.	149
Figure 4.7 Coupling mode interaction strength ($R \pm R_0$) vs. n for GBS for $d = 800 \text{\AA}$	150
Figure 4.8 Coupling mode interaction strength ($R \pm R_0$) vs. n for GBS for $d = 400 \text{\AA}$	150
Figure 4.9 Damping in low frequency regime for GBS for different values of n	152
Figure 4.10 Density Plots of energy loss function of GBS plotted for $n=10^{12} \text{cm}^{-2}$ and $d=400 \text{\AA}$ for lower ($\text{Cos}(q_z d) = -1$) and upper boundaries ($\text{Cos}(q_z d) = 1$).	156
Figure 4.11 Density Plots of energy loss function of GBS plotted for $n=10^{14} \text{cm}^{-2}$ and $d=400$ Angstrom for lower ($\text{Cos}(q_z d) = -1$) and upper boundaries ($\text{Cos}(q_z d) = 1$).	157
Figure 4.12 Density Plots of energy loss function of GBS plotted for $n=10^{14} \text{cm}^{-2}$ and $d=800$ Angstrom for lower ($\text{Cos}(q_z d) = -1$) and upper boundaries ($\text{Cos}(q_z d) = 1$).	158
