

List of Figures

Chapter 1

Fig. 1.1	Global energy systems transition, 1850–2150	3
Fig. 1.2	Interrelation of hydrogen energy systems	8
Fig. 1.3	Comparison of hydrogen storage densities of different hydrogen storage materials	14
Fig. 1.4	The volume of 4 kg of hydrogen stored in different ways, relative to the size of a car	15
Fig. 1.5	Classification of the solid state hydrogen storage material	19
Fig. 1.6	Structure of activated carbon	20
Fig. 1.7	Carbon nano–horn with hydrogen condensed at the end of conical tip: (a) Agglomerate to form nano-carbon particles that exhibit rosette shape and (b) TEM image	22
Fig. 1.8	Hydrogen absorption in a nano tube, with (a) Exterior and (b) Interior H ₂ coverage	23
Fig. 1.9	Structure of a Zeolite	24
Fig. 1.10	Structure of MOF–5	25
Fig. 1.11	Classifications of metal hydride	26

Chapter 2

Fig. 2.1	Pictorial view of metal hydride	42
Fig. 2.2	Schematic Lennard – Jones potential energy diagram	43
Fig. 2.3	Schematic illustration of the different mechanisms involved in the formation of a metal hydride: (a) Absorption mechanism and (b) Desorption mechanism	45
Fig. 2.4	Structure of MgH ₂	51
Fig. 2.5	Mg–H phase diagram at 1 bar	52
Fig. 2.6	Schematic diagram of shrinking core model	68
Fig. 2.7	Schematic diagram showing the three–core spherical	68

	shell of the three phases involved in hydriding reaction	
Fig. 2.8	PCI diagram of metal hydrides	71
Fig. 2.9	The Van't Hoff relation of different metal hydrides	74

Chapter 3

Fig. 3.1	Movements of working parts and balls in a planetary ball Mill	83
Fig. 3.2	Photographs showing planetary ball mill: (a) Front view and (b) Top view	83
Fig. 3.3	Schematic view of a scanning electron microscopy (SEM)	85
Fig. 3.4	Photograph of the laboratory SEM	87
Fig. 3.5	Basic principle of the EDS	88
Fig. 3.6	The geometry used for simplified derivation of Bragg's law	89
Fig. 3.7	Photograph of the XRD	91
Fig. 3.8	P & ID diagram of hydrogen absorption and desorption apparatus used for the experimental work	93
Fig. 3.9	Photograph showing experimental setup of hydrogen absorption and desorption apparatus	94
Fig. 3.10	Example of a typical DSC trace	99
Fig. 3.11	Schematic diagram of the experimental DSC setup	99
Fig. 3.12	Photograph showing the laboratory differential scanning calorimetry (DSC)	100

Chapter 4

Fig. 4.1	SEM micrograph of pure Mg: (a) Without milling and (b) With 40 h milling	105
Fig. 4.2	EDS spectra of pure Mg	106
Fig. 4.3	XRD spectra of pure Mg	106

Fig. 4.4	Kinetics curve of pure Mg at 303 °C charging and 365 °C discharging temperatures: (a) Without milling and (b) With 40 h milling	108
Fig. 4.5	SEM micrographs: (a) Pure Ni without milling and (b) Mg ₂ Ni alloy at 40 h milling	108
Fig. 4.6	EDS spectra of Mg ₂ Ni alloy	109
Fig. 4.7	XRD spectra of Mg ₂ Ni alloy	110
Fig. 4.8	Reaction kinetics curve of Mg ₂ Ni alloy: (a) Charging kinetics and (b) Discharging kinetics	111
Fig. 4.9	SEM micrograph of Mg–Fe–Mn–Ni alloy composition	112
Fig. 4.10	EDS spectra of Mg–Fe–Mn–Ni alloy composition	112
Fig. 4.11	XRD spectra of Mg–Fe–Mn–Ni alloy composition: (a) Unhydrided alloy composition and (b) Hydrided alloy composition	114
Fig. 4.12	Reaction kinetics curve of Mg–Fe–Mn–Ni composition for different temperatures: (a) Charging kinetics and (b) Discharging kinetics	115
Fig. 4.13	SEM micrographs in secondary electron mode: (a) Pure V and optimized Mg–V–Ni composition (code MV2) at different magnifications: (b) 650 X, (c) 1000 X and (d) 1500 X	118
Fig. 4.14	SEM micrographs of the optimized Mg–V–Ni composition (code MV2), in back scattering mode at different magnifications: (a) 250 X, (b) 500 X and (c) 1000 X	119
Fig. 4.15	EDS spectra of synthesized Mg–V–Ni compositions: (a) MV1, (b) MV2 and (c) MV3	121
Fig. 4.16	XRD spectra: (a) Unhydrided Mg–V–Ni compositions (40 h milled), (b) Unhydrided MV2 composition for various milling times and (c) Hydrided composition of	123

MV2

Fig. 4.17	Charging kinetics curve of MV2 composition for as blended and different milling times	125
Fig. 4.18	Charging kinetics curve for different compositions	125
Fig. 4.19	Charging kinetics curve for different Mg–V–Ni compositions at different hydriding temperatures: (a) MV1, (b) MV2 and (c) MV3	127
Fig. 4.20	Discharging kinetics curve for different Mg–V–Ni compositions at different dehydriding temperatures: (a) MV1, (b) MV2 and (c) MV3	129
Fig. 4.21	Hydriding characterization of MV2 coded alloy composition using ideal and real gas equations: (a) H ₂ absorption versus time and (b) Deviation in absorption from ideal gas equation	131
Fig. 4.22	Dehydriding characterization of MV2 coded alloy composition using ideal and real gas equations: (a) H ₂ desorption versus time and (b) Deviation in desorption from ideal gas equation	132
Fig. 4.23	Model fit for experimental data using lumped first order kinetics model for the optimized MV2 coded composition: (a) Charging kinetics and (b) Discharging kinetics	134
Fig. 4.24	Model fit for experimental data using different model for the optimized MV2 coded composition: (a) Shrinking core model and (b) Johnson–Mehl–Avrami model	135
Fig. 4.25	Experimental and derived pressure ratio versus inverse temperature (using Van't Hoff equation) for optimized MV2 composition	137
Fig. 4.26	Electrical power absorbed during DSC test versus time/temperature plot for hydrided MV2 coded	137

	composition	
Fig. 4.27	SEM Micrographs: (a) Pure Palladium and synthesized Mg–Pd–Ni compositions: (b) MP1, (c) MP2 and (d) MP3	140
Fig. 4.28	EDS spectra of different Mg–Pd–Ni compositions for 40 h milled samples: (a) MP1, (b) MP2 and (c) MP3	142
Fig. 4.29	XRD spectra of the different Mg–Pd–Ni compositions: (a) Unhydrided compositions and (b) Hydrided MP2 coded composition	144
Fig. 4.30	Charging kinetics of the different Mg–Pd–Ni compositions	145
Fig. 4.31	Charging kinetics of MP2 coded composition: (a) Different milling time and (b) Different Charging Pressure	146
Fig. 4.32	Charging kinetics of the different Mg–Pd–Ni compositions: (a) MP1, (b) MP2 and (c) MP3	148
Fig. 4.33	Discharging Kinetics of the Different Mg–Pd–Ni Compositions: (a) MP1, (b) MP2 and (c) MP3	150
Fig. 4.34	Hydriding characterization of MP2 coded alloy composition using ideal and real gas equations: (a) H ₂ absorption versus time and (b) Deviation in absorption from ideal gas equation	151
Fig. 4.35	Dehydriding characterization of MP2 coded alloy composition using ideal and real gas equations: (a) H ₂ desorption versus time and (b) Deviation in desorption from ideal gas equation	152
Fig. 4.36	Model fits for experimental data using lumped first order kinetics model for the optimized MP2 coded composition: (a) Charging kinetics and (b) Discharging kinetics	154
Fig. 4.37	Model fits for experimental data using different models	156

	for the optimized MP2 coded composition: (a) Shrinking core model and (b) Johnson–Mehl–Avrami model	
Fig. 4.38	Experimental and derived pressure ratio versus inverse temperature (using Van’t Hoff Equation) for optimized MP2 composition	157
Fig. 4.39	Electrical power absorbed during DSC test versus time/temperature plot for optimized MP2 coded hydride composition	157
Fig. 4.40	SEM micrographs: (a) Pure Zirconium and synthesized Mg–Zr–Mn–Ni compositions: (b) MZ1, (c) MZ2 and (d) MZ3	160
Fig. 4.41	EDS spectra of different Mg–Zr–Mn–Ni compositions for 40 h milled: (a) MZ1, (b) MZ2 and (c) MZ3	162
Fig. 4.42	XRD spectra: (a) Unhydrided Mg–Zr–Mn–Ni alloy compositions and (b) Hydrided alloy coded MZ2	164
Fig. 4.43	Charging kinetics curve of MZ2 coded composition for different milling times	165
Fig. 4.44	Charging kinetics curve for different Mg–Zr–Mn–Ni compositions	166
Fig. 4.45	Charging kinetics of the different Mg–Zr–Mn–Ni compositions: (a) MZ1, (b) MZ2 and (c) MZ3	167
Fig. 4.46	Absorption/desorption kinetics of MZ1 coded composition	168
Fig. 4.47	Discharging kinetics of the different Mg–Zr–Mn–Ni compositions: (a) MZ1, (b) MZ2 and (c) MZ3	169
Fig. 4.48	Hydriding characterization of MZ2 coded alloy composition using ideal and real gas equations: (a) H ₂ absorption versus time and (b) Deviation in absorption from ideal gas equation	171
Fig. 4.49	Dehydriding characterization of MZ2 coded alloy	172

	composition using ideal and real gas equations: (a) H ₂ desorption versus time and (b) Deviation in desorption from ideal gas equation	
Fig. 4.50	Model fit for experimental data using lumped first order kinetics model for the optimized MZ2 coded composition: (a) Charging kinetics and (b) Discharging kinetics	174
Fig. 4.51	Model fit for experimental data using different model for the optimized MZ2 coded composition: (a) Shrinking core model and (b) Johnson–Mehl–Avrami model	175
Fig. 4.52	Experimental and derived pressure ratio versus inverse temperature (using Van’t Hoff Equation) for optimized MZ2 composition	176
Fig. 4.53	Electrical power absorbed during DSC test versus time/temperature plot for optimized MZ2 coded hydride composition	177

Chapter 5

Fig. 5.1	SEM micrograph of (a) Pure Fe without milled (b) Pure Ti without milled and Fe–Ti–Ni composition (40 h milled): (c) 500 X and (d) 1000 X	183
Fig. 5.2	EDS spectra of Fe–Ti–Ni alloy composition	184
Fig. 5.3	XRD spectra of the synthesized Fe–Ti–Ni alloy composition	184
Fig. 5.4	Kinetics curve of Fe–Ti–Ni composition: (a) Charging kinetics and (b) Discharging kinetics	186
Fig. 5.5	SEM micrograph of V–Ti composition (40 h milled): (a) 500 X and (b) 1000 X	188
Fig. 5.6	EDS spectra of V–Ti alloy composition	188
Fig. 5.7	XRD spectra of the synthesized V–Ti alloy composition	189

Fig. 5.8	Kinetics curve of V–Ti composition: (a) Charging kinetics and (b) Discharging kinetics	190
Fig. 5.9	SEM micrographs of V–Ni alloy after 15 h milling: (a) 500 X and (b) 1000 X	192
Fig. 5.10	EDS spectra of synthesized V–Ni alloy composition	193
Fig. 5.11	XRD spectra of the synthesized V–Ni alloy composition	194
Fig. 5.12	Kinetics curve of V–Ni composition: (a) Charging kinetics and (b) Discharging kinetics	195
 Chapter 6		
Fig. 6.1	Volumetric comparison of various hydrogen storage media gaseous for 1 kg H ₂ : (a) Gaseous storage at 150 kg/cm ² , (b) Low temperature based metal hydride and (c) Mg based metal hydride	199
Fig. 6.2	Fixed metal hydride bed for hydrogen storage	200
Fig. 6.3	Schematic diagram of the power system application of Mg based metal hydride	201
Fig. 6.4	Application of hydride storage system to hydrogen fueled vehicles (supplemental heat case)	204
Fig. 6.5	Application of hydride storage system to hydrogen fueled vehicles (non – supplemental heat case)	205
Fig. 6.6	Basic concept of a heat pump	207
Fig. 6.7	Principles of a heat pump cycle (Van't Hoff plots on P–T relations)	207
Fig. 6.8	Basic concept of a refrigerator	208
Fig. 6.9	Principles of a refrigeration cycle (Van't Hoff plots on P–T relations)	208
