

## List of Tables

Table 1.1: Microbial abundance reported in different subsurface environments .....	8
Table 1.2: Microbial diversity and distribution in different subsurface sedimentary ecosystems .....	11
Table 1.3: Methods used for the measuring microbial activity of soil or sediment samples...	21
Table 1.4: Phenotypic and genotypic methods used for functional microbial diversity assessment.....	26
Table 1.5: Heavy metals bioremediation studies in the laboratory (i.e., microcosm study).....	28
Table 2.1: Sediment enzymes assay protocols for measuring microbial activities.....	41
Table 2.2: Primers and thermal profiles used in qPCR.....	46
Table 3.1: Genus level identification of bacterial isolates obtained from Chokari (CRD) sediment profile.....	67
Table 3.2: Sequence analysis of selected DGGE bands obtained from CRD core samples based on topmost best match sequence acquired in NCBI-BLASTn similarity search. ....	70
Table 3.3: Mean, SD, and Max values of enzyme activities and 16S rRNA gene copy numbers of CRD core samples selected for metabarcoding and 0.2-0.3 m core sample (CRD 1). ....	71
Table 3.4: Total number of reads and OTUs obtained after preprocessing .....	71
Table 5.1: Genus level identification of bacterial isolates obtained from Rayka (RYD) sediment profile.....	108
Table 5.2: Genus level identification of bacterial isolates obtained from Rampura (RMD) sediment profile.....	109
Table 5.3: MIC of bacterial strains obtained from RYD and RMD cores for Cr(VI). Bacterial strains showing MIC >40 ppm are represented in bold.....	112
Table 5.4: pH and EC of leachate fraction-1 obtained from control and experimental columns treated with <i>Bacillus</i> sp. RYD 15.1A and <i>Streptomyces</i> sp. RMD 42.2B.....	116
