

## LIST OF FIGURES

<b>S.No.</b>	<b>Figure Title</b>	<b>Page No.</b>
<b>2.1</b>	Classification of textile fibers	<b>15</b>
<b>2.2</b>	Structure of cellulose molecule	<b>35</b>
<b>2.3</b>	Formation of micro and microfibrils and their position in the cell wall	<b>36</b>
<b>2.4</b>	Schematic representation of Hemicellulose	<b>37</b>
<b>2.5</b>	1)P-coumaryl- ,2) coniferyl- and 3) sinapyl alcohol: dominant building blocks of the three dimensional polymer lignin	<b>38</b>
<b>2.6</b>	Model structure of <i>spruce</i> Lignin	<b>38</b>
<b>2.7</b>	Lattice structure of cellulose I and cellulose II	<b>42</b>
<b>2.8</b>	Scheme of interaction of silanes with cellulose fiber	<b>44</b>
<b>2.9</b>	Ring spinning system	<b>61</b>
<b>2.10</b>	Automobile components made of natural fiber reinforced composites	<b>62</b>
<b>4.1</b>	Chemical composition of raw banana fiber	<b>101</b>
<b>4.2</b>	Longitudinal section of raw banana fiber	<b>105</b>
<b>4.3</b>	Cross section of raw banana fiber	<b>105</b>
<b>4.4</b>	Lignocellulose network	<b>109</b>
<b>4.5</b>	Positioning of lignocellulosic components in a plant cell wall	<b>110</b>
<b>4.6</b>	Stress strain curve of lignocellulosic fibers	<b>117</b>
<b>4.7</b>	Feeding mechanism of yarns on phoenix Charkha	<b>136</b>
<b>4.8</b>	Process of spinning yarn on ring spinning system	<b>142</b>
<b>4.9</b>	Percent type of respondents for market evaluation of banana fabrics	<b>175</b>
<b>4.10</b>	SWOC analysis of banana fiber	<b>177</b>
