

## LIST OF TABLES

TABLE	TITLE	PAGE NO.
1.	Distribution of housewives and husbands by age	98
2.	Distribution of housewives and husbands by education level	99
3.	Distribution of housewives and husbands by occupation	100
4.	Distribution of families by monthly income	101
5.	Distribution of families by type of household	102
6.	Distribution of families by tenure of house	102
7.	Distribution of families by age of house	103
8.	Distribution of housewives by values held by them with reference to artificial lighting in kitchen	105
9.	Distribution of housewives by their kitchen lighting related goals	106
10.	Distribution of housewives by their preferences regarding lighting system in kitchen	108
11.	Distribution by housewives and husbands by their knowledge level pertaining to artificial lighting	109
12.	Distribution of housewives by involvement in performance of kitchen – related activities	111
13.	Distribution of housewives by scores on discomfort experienced while working under existing artificial lighting in the kitchen	113
14.	Distribution of housewives by sources of information and sources that influenced their choices of lighting products	115

TABLE	TITLE	PAGE NO.
15.	Distribution of families by their involvement in installation plan and purchase of lighting products	115 A
16.	Distribution of kitchens by their sizes	117
17.	Distribution of kitchens by the layout of work platform	118
18.	Distribution of kitchens by existing colour schemes	119
19.	Distribution of kitchens by surface reflectances	121
20.	Distribution of families by existing lighting system in the kitchen	124
21.	Distribution of families by use of artificial lighting in kitchens during day – time and night – time	126
22.	Distribution of families by units of electric power consumed	128
23.	Distribution of kitchens by room index	129
24.	Distribution of kitchens by per cent effective ceiling and floor cavity reflectances	130
25.	Distribution of kitchens by maintenance factor	132
26.	Distribution of kitchens by utilisation factor	133
27.	Distribution of kitchens by general ambient illuminance and illuminance at selected task areas under artificial source of light	135
28.	Distribution of kitchens by illuminance uniformity	137
29.	Distribution of families by illuminance ratio between task and area surrounding the task	140

TABLE	TITLE	PAGE NO.
30.	Distribution of kitchens by degree of glare at the work areas	141
31.	Distribution of kitchens by the characteristic of shadow at the work areas	143
32.	Distribution of kitchens by area of aperture in exterior wall(s)	145
33.	Distribution of kitchens by aperture – floor ratio	146
34.	Distribution of kitchens by their orientation	148
35.	Distribution of kitchens by average daylight factor	149
36.	Distribution of kitchens by average general ambient illuminance and average illuminance at selected task areas under natural lighting	151
37.	Distribution of kitchens by illuminance uniformity under natural lighting	152
38.	Comparison of mean of family and personal characteristics in relation to IuAL	155
39.	Comparison of mean of salient characteristics of the kitchen in relation to IuAL	156
40.	Comparison of mean of salient characteristics of the kitchen in relation to average general ambient IuNL	158
41.	Coefficient of correlation for twelve variables and average general ambient IuAL	160 A
42.	Difference between mean IuAL by tenure of housing	162
43.	Difference between mean IuAL by floor area of the kitchen	165
44.	Difference between mean scores on IuAL by UF	168

TABLE	TITLE	PAGE NO.
45.	Difference between mean IuAL and comfort value held by housewives	171
46.	Difference between mean IuAL by perceived level of discomfort	173
47.	The table of F-to-enter and the variables entered in the regression equation in step-wise multiple regression conducted in relation to average general ambient IuAL	175
48.	Distribution of subjects by the mean scores on their LoP I under all the different brightness contrasts and six illuminances pooled together	188
49.	Distribution of mean scores of subjects on their LoP I against all the brightness contrasts pooled together under each illuminance	188 A
50.	Distribution of mean scores of subjects on their LoP I against each brightness contrast under all the six illuminance pooled together	189 A
51.	Difference between mean scores on the level of visual performance of subjects on visual acuity test (LoP I) against different brightness contrasts under varying illuminances by their age	196 A
52.	Difference between mean scores on the level of visual performance of subjects on visual acuity test (LoP I) against different brightness contrasts by varying illuminance	199 A
53.	Difference between mean scores on the level of visual performance of subjects on visual acuity test (LoP I) under varying illuminances by brightness contrasts	203 A
54.	Difference between mean scores on the level of visual performance of subjects on visual acuity test (LoP I) against different brightness contrasts by interaction between age and illuminances	205 A

TABLE	TITLE	PAGE NO.
55.	Difference between mean scores on the level of visual performance of subjects on visual acuity test (LoP I) under varying illuminances by interaction between age and brightness contrasts	207 A
56.	Difference between mean scores on LoP II under varying illuminances	210
57.	Mean ranks on PLoVC under varying illuminances	212
58.	Economics of different lighting installations for illuminance of 500 lx and 300 lx for functional and general lighting respectively (with diffusers)	223
59.	Economics of different lighting installations for illuminance of 300 lx and 180 lx for functional and general lighting respectively (with diffusers)	224
60.	Economics of different lighting installations for illuminance of 200 lx and 120 lx for functional and general lighting respectively (with diffusers)	225
61.	Economics of different lighting installations for illuminance of 500 lx and 300 lx for functional and general lighting respectively (without any diffusers)	226
62.	Economics of different lighting installations for illuminance of 300 lx and 180 lx for functional and general lighting respectively (without any diffusers)	227
63.	Economics of different lighting installations for illuminance of 200 lx and 120 lx for functional and general lighting respectively (without any diffusers)	228
