

8. Future scope of Investigation

CHAPTER 8

FUTURE SCOPE OF INVESTIGATION

- To study the dietary intake of the tribal children residing in the tribal villages of *Chikhli taluka*.
- To study the practices related to hygiene and IYCF through spot observations.
- To educate the community about the correct method of handwashing, emphasising on the speculated time period.
- Developing a model village with all the required hygiene and sanitation facilities and then analysing the change in practices related to hygiene and diarrhoeal morbidities.
- To study the effect of intervention using the same model for a longer follow up period to analyse the changes in height for age of the children.
- To study the effect of dietary supplementation on the same population.
- To study the effectiveness of the module developed on larger populations.
- The study the effect of community mobilization for reducing the diarrhoeal morbidities by using total hygiene package.
- To study the impact on child health through the change agents from the community.
