

## Acknowledgement

This thesis, which is now ready for the submission, is the outcome of blessings, support, encouragement and co-operation from many, besides my hard work and dedication. Let me make use of this moment of fulfillment to express my gratitude, though words would not suffice to thank them all.

The saying, गुरुः साक्षात् परब्रह्म, is very apt as far as my research guide, Prof. S. Rama Mohan, is concerned. He is a scholar and perfectionist par excellence. His support and inspiration guided me to success in my academic endeavors. As a person, he is my role-model. His unique stratagem of guiding or research work and imparting knowledge has made me self-reliant and instilled in me a genuine interest and curiosity for my subject.

Without the help of my wife Nilam (Pearl), it would have been impossible for me to complete the research work. Her inspiring nature always forced me to complete the work in a proper and systematic way. I used to reach at 5:00 pm from the job and leave the home around 6:30 pm for my research work. Thus we hardly pass the time together for 1 or 2 hours in the day time. In such a congested time table also she has encouraged me to spare as much time as possible for the research. The blessings of my parents have always supported me in my career. They used to tackle the social relationships without disturbing my schedule. My in-laws have extended their supportive hand as and when required. My son, Priansh is used to keep me smiling in any circumstances during my research work.

I cannot forget the helping hand of my friend Jignesh. We have been together since standard 2 and shared so many joys and sorrows together. We used to discuss all the problems, whether they may be social or technical. He has always helped me with a smiling face. In this context I cannot forget our only combined research paper [30] published in the proceedings of IEEE Computer Society during the conference held at MEPCO, Shivakashi, (TN), India. We have achieved the highest recognition

accuracies in all the three zones viz. lower, middle and upper zones of the Gujarati script. My other friend Dr. Jaita has always given me a good support in solving the problems particularly nonlinear differential equations.

I am sincerely thankful to the management of the Parul Arogya Seva Mandal who has sanctioned 2 year study leave, without which it could not have been possible for me to complete my research in this much duration of time. The motivation given by my senior colleagues at Parul Institute Prof. N. V. Patel and Shri K. J. Jaiswal has encouraged me to work hard. Further, the task could not have been completed without the support of all the members of the Department of Applied Mathematics of the institute.

I would like to thank Pathak sir for his important guidance during the discussion over one of the industrial problems. Without his help I could have not worked on that paper [5]. Moreover I would also like to convey my thanks to Trupti madam, Snehal sir and all the staff members of the department of Applied Mathematics, Faculty of Technology & Engineer, The M. S. University of Baroda who have directly or indirectly supported me.

Last but not the least; I would like to thank the Head of the Applied Mathematics department of Faculty of Technology & Engineer, The M. S. University of Baroda , Dr. Dhanesh Patel for allowing the use of all then necessary resources at the department of my research.

I would like to thank all others who have directly or indirectly helped me during my research work.
