1	Wavelets and Multiresolution Analysis	1
1.1	Historical Perspective	1
1.1.1	An Overview	1
1.1.2	History from Eighteenth Century	2
1.2	Motivation for Studying Wavelets	3
1.3	Preliminary Requirement	9
1.3.1	Some Important Spaces	9
1.3.2	Inner Product Space	10
1.3.3	Compact Support of a Function	11
1.3.4	Properties of Hilbert Space	11
1.3.5	Projection	12
1.3.6	Fourier Transform and its Properties	13
1.4	Multiresolution Analysis	14
1.4.1	Spaces W_j	16
1.4.2	Basic Scaling Function and Basic Wavelet	16
1.4.3	Expansion of a Function in V_j	17

1.4.4	Dilation Equation and Wavelets Equation	19
1.4.5	Filter Coefficients	20
1.4.6	Decay of the Wavelet Coefficients	22
1.5	Wavelets and the Fourier Transform	24
1.5.1	The Wavelet Equation	26
1.5.2	Orthonormality in the Frequency Domain	28
1.5.3	Periodized Wavelets	29
1.5.4	Periodized MRA in $L^2(0, 1)$	30
1.5.5	Expansions of Periodic Functions	32
2	Wavelet Algorithms	35
2.1	Numerical Evaluation of ϕ and ψ	35
2.1.1	Computing ϕ at Integers	35
2.1.2	Computing ϕ at Dyadic Rational	36
2.1.3	Function Values of the Basic Wavelet	38
2.2	Evaluation of Scaling Function Expansion	38
2.2.1	Non Periodic Case	38
2.2.2	Periodic Case	39
2.3	DST and IDST - Matrix Formulation	40
2.4	Periodic Function in Interval (a, b)	41
2.5	Fast Wavelet Transforms	42
2.6	Periodic FWT	44
2.7	Matrix Representation of the FWT	46

2.8	A More General FWT	47
2.9	Complexity of the FWT Algorithm	49
2.10	Two Dimensional Fast Wavelet Transform	49
2.11	Accuracy of the Multiresolution Space	50
2.11.1	Approximation Properties of V_J	50
2.11.2	Approximation Properties of $\tilde{V}_J$	52
2.12	Wavelet Transform of a Circulant Matrix	53
2.12.1	Introduction	53
2.12.2	The Wavelet Transform Revisited	54
2.13	2D Wavelet Transform of a Circulant Matrix	57
2.13.1	Blocks on the Diagonal	58
2.13.2	Blocks below the Diagonal	61
2.13.3	Blocks above the Diagonal	62
2.13.4	Algorithm	64
2.13.5	A Data Structure for the 2D Wavelet Transform	65
2.13.6	Computational Work	68
2.13.7	Storage	69
2.14	2D Wavelet Transform of a Circulant, Banded Matrix	69
2.14.1	Calculation of Bandwidths	71
2.15	Matrix-vector Multiplication in a Wavelet Basis	74
2.15.1	Blocks on or below the diagonal	75
3	Vectorization and Parallelization of FWT	78

3.1	The CP200 Vector Parallel Computer	78
3.2	Vectorization of Fast Wavelet Transform	79
3.2.1	Introduction	79
3.2.2	1 D Fast Wavelet Transform	80
3.2.3	Multiple 1D Fast Wavelet Transform	83
3.2.4	2D Fast Wavelet Transform	85
3.2.5	Conclusion	85
3.3	Parallelization of Fast Wavelet Transform	86
3.3.1	Introduction	86
3.3.2	1D Fast Wavelet Transform	87
3.3.3	Multiple 1D Fast Wavelet Transform	91
3.3.4	2D Fast Wavelet Transform	94
3.3.5	Replicated 2D Fast Wavelet Transform	95
3.3.6	Communication-efficient FWT	96
3.3.7	Conclusion	97
4	Wavelets and Partial Differential Equations	98
4.1	Introduction: Wavelet-Galerkin Method for Partial Differential Equation	98
4.2	Connection Coefficients	99
4.3	Differentiability	103
4.4	Differentiation Matrix with respect to Scaling Functions	104
4.5	Differentiation Matrix with respect to Physical Space	106
4.6	Differentiation Matrix for Functions with Period L	106

4.7	Differentiation Matrix with respect to Wavelet Space	107
4.8	Wavelet-Galerkin Method for Second Order Wave Equation	108
4.8.1	Weak Formulation	109
4.8.2	Wavelet-Galerkin Method to solve Hyperbolic Equation	110
4.8.3	Semi-Discrete Wavelet-Galerkin Method	110
4.8.4	Error Analysis for the Semi-Discrete Method	110
4.8.5	Computational Results for the Wave Equation	114
4.8.6	Representation with respect to Scaling Functions	115
4.8.7	Representation with respect to Wavelets	115
4.8.8	Representation with respect to Physical Space	116
4.8.9	Hybrid Representation	117
4.8.10	Results and Discussion	117
4.8.11	Conclusion	118
4.9	Wavelet-Galerkin Method for Regularized Long Wave Equation	118
4.9.1	Semi-discrete Wavelet-Galerkin Method	119
4.9.2	Error Analysis for the Semi-discrete Scheme	120
4.9.3	Computational Result for the RLW Equation	120
4.9.4	Conclusion	121
4.10	Wavelet-Galerkin Method for Parabolic Equation	121
4.10.1	Error Analysis for the Semi-Discrete Method	123
4.10.2	Computational Results	123
4.10.3	Representation with respect to Scaling Functions	124
4.10.4	Galerkin Method	124

4.10.5 Representation with respect to Wavelets	125
4.10.6 Representation with respect to Physical Space	125
4.10.7 Hybrid Representation	126
4.10.8 Conclusion	127
4.11 Wavelet-Galerkin Method for Burger's Equation	127
4.11.1 Computational Results	128
4.11.2 Results and Discussion	129
5 Error Estimates for Wavelet-Galerkin Solution of BVP	151
5.1 Introduction	151
5.2 Error Estimates	151
5.2.1 Introduction	151
5.2.2 Finite Difference Method	154
5.2.3 Wavelet Galerkin Method	156
5.2.4 Some Error Estimates	160
5.3 Wavelet-based Green's Function Approach to Hlemholtz & Modified Helmholtz Problem	165
5.3.1 Introduction	165
5.3.2 Finite Difference Solution of the Periodic Problem	167
5.3.3 Wavelet-Galerkin Solution to the Periodic Problem	173
5.3.4 Differential Equation in Wavelet Space	178
5.3.5 Incorporation of Boundary Conditions	182
5.3.6 Convergence and Computation Time for Test Examples	184
5.3.7 Conclusion	185

6	Wavelets and Preconditioners	187
6.1	Numerical Approach to Poisson Equation	188
6.1.1	Numerical Results for One Dimension	191
6.1.2	Numerical Results for Two Dimension	193
6.1.3	Conclusion	193
7	Finite Pointset Method and Weight Functions	195
7.1	Introduction	195
7.2	Introduction to Meshfree Methods	195
7.2.1	Introduction to Finite Pointset Method	198
7.3	Least Square Method for Approximation of Derivatives	203
7.4	Least Square Method for Solving Elliptic Equation	205
7.5	Weight Functions	209
7.5.1	Weight Functions of Different Types	209
7.5.2	Influence of Weight Function on Error and Condition Number	214
7.6	Numerical Results	215
7.6.1	Test Examples in $1D$	215
7.6.2	Test Examples in $2D$	215
7.6.3	Results and Discussion	216
8	Finite Pointset Method and Preconditioners	218
8.1	Introduction to Preconditioners	218
8.1.1	Jacobi Preconditioner	219
8.1.2	Block Jacobi Preconditioner	219

8.1.3	Complete and Incomplete Factorization Preconditioner	219
8.1.4	Point Incomplete Factorization	220
8.2	Iterative Methods and its Solvers	221
8.2.1	Nonstationary Iterative Method	221
8.2.2	Solvers for Numerical Methods	223
8.2.3	Solvers for Another Method	225
8.3	Results and Discussion	226
8.3.1	Analysis without using Preconditioner for $1D$ and $2D$	228
8.3.2	Analysis with using Preconditioner for $1D$ and $2D$	228
9	Finite Pointset Method: Stability and Convergence	230
9.1	Filtering Algorithms	230
9.1.1	New Filtering Algorithms for the Neighboring Particles	232
9.2	Test Examples	234
9.2.1	Dirichlet Problem	234
9.2.2	Neumann Problem	234
9.2.3	Mixed Problem	234
9.3	Influence of Particle Distribution on Error and Condition Number of Matrix for $1D$ Problems	235
9.3.1	Conclusion for Dirichlet Problem in $1D$	235
9.3.2	Conclusion for Neumann and Mixed Problem in $1D$	235
9.4	Influence of Particle Distribution on Error and Condition Number of Matrix for $2D$ Problem	236
9.4.1	Conclusion for Dirichlet Problem in $2D$	236

9.4.2	Conclusion for Neumann and Mixed problem in $2D$	237
9.4.3	Conclusion for Helmholtz problem in $2D$	237
9.5	Conclusion for Algorithms	238
9.5.1	Algorithm-1	238
9.5.2	Algorithm-2	238
9.5.3	Algorithm-3	238
10	Application of Wavelet Methods and FPM to Industrial Problems	257
10.1	Numerical Simulation of of Cooling of Coke in a Can	257
10.1.1	Introduction	257
10.1.2	Mathematical Model	258
10.1.3	Dimension Analysis	261
10.1.4	Finite Difference Method	263
10.1.5	Numerical Simulation	264
10.1.6	Results and Discussion	264
10.2	Mathematical Models for Pressure Distribution in a Slider Bearing Lubricated with Viscous Fluid	266
10.2.1	Introduction	266
10.2.2	Navier-Stokes Lubrication Equations	266
10.2.3	Slider Bearing	272
10.2.4	Results and Discussion	275
A	Some More Definitions, Theorems, Lemmas, and Corollaries	276
A.1	The Modulus Operator	276

A.2 Moments of Scaling Functions	277
A.3 Circulant Matrices and the DFT	279
