CONTENTS

List of symbols **6**

Abstract **9**

1. Preliminaries **10**

1.1 Outline of the thesis 10

1.2 Preliminaries 1

1.2.1 Graph theory 11

1.2.2 Computer vision 15

2. Introduction to labeling problems of computer vision **21**

2.1 Labeling problems 21

2.2 Constraints of labeling problems 22

2.3 Objective function in standard form 23

2.4 Structural differences 25

2.4.1 Universally smooth structure 25

2.4.2 Segment wise constant structure 26

2.4.3 Segment wise smooth structure 27

2.5 Prevalent optimization approaches 29

2.5.1 Global optimization techniques 29

2.5.2 Local optimization techniques 30

2.6 Statistical justification of the approach 31

2.6.1 Markov random field 31

2.6.2 MAP estimation 32

3. Optimization using graph cuts **34**

3.1 Graph cut model for universally smooth structure 34

3.2 Graph cut models for segment wise smooth structure 38

3.2.1 Graph cut model for interchange moves 42

3.2.2 Graph cut model for growth moves 50

3.3 Segment wise constant structure 68

3.3.1 Graph cut model with multiple terminal vertices 69

3.3.2 Graph cut model with shift move space 72

4. Textual image binarization using graph cuts **90**

4.1 Introduction 90

4.2 Definition of the problem to be addressed 91

4.3 Theoretical justification of the model 92

4.4 Implementation and results 95

5. Characterization of objective functions optimizable through network flow terminology **111**

5.1 Introduction 111

5.2 Importance of variables of range of size two 111

5.3 Graphs representing objective functions 112

5.3.1 Class of functions involving cliques of size at most two 114

5.3.2 Class of functions involving cliques of size at most three 118

5.3.3 Summary of network construction for objective functions 137

5.3.4 Example of optimization of R – function of class O^3 using the terminology 139

Conclusion **142**

List of publications **143**
