Abstract I

Certificate IV

Acknowledgements V

Content VI

1 INTRODUCTION

1.1 Earthquakes and their Effects 1

1.2 Basic Concepts of Structural Dynamics 3

1.3 Introduction to Seismic Analysis 5

1.4 Types of Structural Analysis 9

1.5 Scope and Objectives of the Present Work 13

1.6 Organization of the Thesis 16

2 METHODS OF ANALYSIS FOR EARTHQUAKE FORCES

2.1 General 19

2.2 Method for Linear Static Analysis 19

2.3 Methods for Linear Dynamic Analysis 20

2.4 Methods for Non linear Analysis 21

2.5 Modal Analysis 24

2.6 Response Spectrum Method 24

3 REVIEW OF LITERATURE

3.1 Seismic Response of Buildings 26

3.2 Seismic Performance of Semi Rigid Joints 40

3.3 Behaviour of Beam Column Joints 50

3.4 Post Tensioned Slabs and Beams 53

3.5 Outcome of the Literature Survey 58

4 PERFORMANCE BASED SEISMIC EVALUATION AND DESIGN

| | | |
|---|---|---|
| 4.1 | Performance Objectives | 59 |
| 4.2 | ATC-40 Provisions | 60 |
| 4.3 | Potential Plastic Hinge Zones | 64 |
| 4.4 | Evaluation of Performance | 66 |
| 4.5 | Methods to Perform Non linear Analysis | 67 |
| 4.6 | Steps to Determine Capacity | 71 |
| 4.7 | Steps to Determine Demand | 75 |
| 4.8 | Steps for Checking Performance | 84 |
| 4.9 | Conversion of Demand and Capacity to ADRS Format | 85 |

5 SEISMIC PERFORMANCE OF RC FRAMES WITHOUT INFILL WALLS

| | | |
|---|---|---|
| 5.1 | General Remarks | 88 |
| 5.2 | Steps for Analysis Through SAP2000 | 88 |
| 5.3 | Mathematical Models Developed | 89 |
| 5.4 | Results of the Push Over Analysis | 92 |
| 5.5 | Discussion of Results | 108 |

6 SEISMIC EVALUATION OF FRAMES WITH INFILL WALLS

| | | |
|---|---|---|
| 6.1 | Mathematical Model | 110 |
| 6.2 | Loads Considered for Analysis | 112 |
| 6.3 | Definition of Pushover Cases | 112 |
| 6.4 | Modeling of Infill Walls | 113 |
| 6.5 | Results of the Analysis | 114 |
| 6.6 | Observations and Discussions | 129 |

7 SEISMIC EVALUATION OF RC FRAMES WITH T SHAPED COLUMNS

| | | |
|---|---|---|
| 7.1 | Numerical Model | 132 |
| 7.2 | Loads Considered for Analysis | 133 |
| 7.3 | Definition of Pushover Cases | 134 |
| 7.4 | Modeling Aspects | 135 |
| 7.5 | Results of the Analysis | 137 |
| 7.6 | Observations and Discussions | 145 |

8 EFFECT OF SEMIRIGIDITY OF JOINT ON RC PLANE FRAMES

8.1 Need for Incorporating Semi Rigid Joints 148
8.2 Example for Verification of Modeling Aspects 148
8.3 Effect of Semirigidity on Beam Moments 151
8.4 Effect of Semirigid Joints on Seismic Performance 167
8.5 Discussions of Results 186

9 EFFECT OF SEMIRIGIDITY OF JOINT ON RC SPACE FRAMES

9.1 Incorporating Semi Rigid Joints in a Space Frame 188
9.2 Semirigidity in Space Frames with Varying Storeys 191
9.3 Summary of Results 200
9.4 Seismic Performance of Semirigid Space Frames 202
9.5 Observations and Discussion of Results 212

10 ANALYSIS OF HYBRID FRAMES UNDER SEISMIC FORCES

10.1 General Concept 217
10.2 Mathematical Models Considered for Analysis 220
10.3 Types of Frames Considered 220
10.4 Geometric Properties and Loads Considered 222
10.5 Parameters for Pushover Analysis 224
10.6 Results Obtained from the Pushover Analysis 227
10.7 Observations and Discussion 242

11 HYBRID CONCEPT EXTENDED TO BIGGER FRAMES

11.1 Mathematical Models Developed 245
11.2 Results of the Pushover Analysis 249
11.3 Discussion of Results 280

12 SEISMIC RESPONSE OF FRAMES WITH POST TENSIONED BEAMS

12.1 The Concept of Post Tensioned Concrete System 283
12.2 Reinforced and Post Tensioned Concrete Floors 285
12.3 The Effect of PT Floors on Seismic Performance 287
12.4 The Hybrid Concept Applied to Frames with PT Beams 288

12.5 Models Developed to Study the Effect of PT Beams 290
12.6 The Results of Push Over Analysis 294
12.7 The Comparison of Results 307
12.8 Outcome of the Study 308

13 SEISMIC EVALUATION USING OPENSEES SOFTWARE
13.1 The Open Source Software OpenSEES 309
13.2 Pushover Analysis of a Frame with OpenSEES 313
13.3 Comparison of Results – OpenSEES and ETABS 322
13.4 Comments on Results 327

14 THE EFFECT OF FLOATING COLUMNS ON SEISMIC PERFORMANCE
14.1 The Concept of Floating Columns 328
14.2 Mathematical Models with Floating Columns 329
14.3 The Results of Analysis 333
14.4 Important Observations 346

15 PERFORMANCE OF RC FRAMES UNDER TIME HISTORY ANALYSIS
15.1 Preamble 349
15.2 The Mathematical Models Considered 349
15.3 The Results of Analysis 354
15.4 Observations and Discussions 363

16 CONCLUSIONS AND CONTRIBUTIONS
16.1 Summary 367
16.2 Conclusions 369
16.3 Contributions 375
16.4 Future Scope 377
