I am deeply grateful to my PhD project guide Prof (Dr) Bina Sengupta for her valuable role in my whole doctoral work. Prof Bina Sengupta provided me all sorts of guidance, facilities and her expertise to overcome any difficulty that came across my PhD project work. She gave me freedom to think over and utilize my ideas in all the areas of my research work. From the inception of my project work and till the end of the thesis writing, she always provided me encouragement and support as and when required. Prof Bina Sengupta promptly supported me in development of the experimental set up, testing of samples etc up to the final writing of the PhD thesis.

I would rather be failing in my duty if I forget to express my sincere gratitude to Prof (Dr.) Ranjan Sengupta of Chemical Engineering Department, MSU, whose insight, knowledge and valuable guidance was inevitable in the completion of my PhD project work. He even guided me in the early period during my PhD registration process which I shall never forget in my life.

I owe my profound gratitude to the Chairman Shri Mukulbhai Thakore and Director Shri Jivrajbhai Patel of Shri S'ad Vidya Mandal Institute of Technology, Bharuch and Shri R.C.Joshi for providing me the necessary permission and leave to fulfill the compulsory requirements of PhD project to be carried out at The Maharaja Sayajirao University, Baroda. I also take this opportunity to thank Enviro Technology Ltd (ETL), Ankleshwar and Shri Panjwani as well as Shri B.D.Dalwadi for providing me the necessary permission to access the Microbiology lab at ETL and BEIL, Ankleshwar in order to develop inoculum culture at the initial stage and for providing the facility of AAS and ICP to find the composition of the substrate.

I am equally thankful to Prof S.K.Shah of Chemistry department, MSU, Baroda who promptly provided support in carrying out NMR tests for my samples. I am thankful to Prof. Anuradha Nerurkar of Microbiology department who supported me in different ways in my characterization work with TLC, in finding out surface tension values for my sample and providing technical guidance as and when required. I am also thankful to Mr Rohan Bhalerao, Labindia, Mumbai who promptly supported me in carrying out ESI-MS tests at TDM Laboratory. I am also thankful to the staff of Choksi Laboratory, Baroda for their support in conducting FTIR and HPLC tests for my samples. At this juncture I would like to express my sincere thanks to Kamlesh Gupta, for supporting me with

preparing graphs, all the teaching and non-teaching staff of Chemical Engineering Department of Faculty of Technology, MSU, Baroda for their kind support and all those who directly or indirectly supported me in this PhD project work.

I am very fortunate enough to get constant encouragement, guidance as well as moral and financial support from my family during good and bad times that came across this PhD project work. I owe my sincere thanks to my father Shri Sureshbhai Gurjar, my mother Smt Ramaben Gurjar, my uncle Shri Rasikbhai Gurjar for always encouraging me during this project work. I am indebted to my wife Swetal Gurjar who always made me believe in myself. I am thankful to my sister Janki Prajapati, my cousins and my relatives for their constant support without which this PhD project would not be possible.

Mr Jigar S.Gurjar
