

List of Figures

Figure No.	Title	Page No.
2.1	Three leg topology of shunt active power filter	23
2.2	Shunt power filter topology	12
2.3	Filter current I_F generated to compensate load current harmonics	34
2.4	Basic compensation principle	45
2.5	Actual load, desired source and the compensating current	78
2.6	Shunt active power filter power flow for ideal compensation	12
2.7	Single line and vector diagrams for shunt APF	12
2.8	Basic principle of hysteresis band control	41
2.9	Control block diagram for STATCOM	45
3.1	Series active power filter topology with shunt passive filters	78
3.2	Filter voltage generation to compensate voltage disturbances	78
3.3	Basic compensation principle	10
5.8	Source voltage, source current and filter current for phase A	12
3.5	Circuit configuration for series active power filter	12
3.6	Control block diagram for DVR	12
4.1	Unified Power Quality Conditioner Topology	23
4.2	General UPQC	13
4.3	Specific UPQC	13
4.4	Control scheme of V_c	15
4.7	Equivalent circuit for voltage detecting method	12
5.1	MATLAB model for Shunt active power filter	68
5.2	Reference current generation	69
5.3	Calculation of maximum value of reference current using PI controller	69

LIST OF FIGURES

5.4	Pulse generation diagram	69
5.5	Three phase supply voltages	70
5.6	Load current	70
5.7	Source current before and after compensation	71
5.8	Source voltage, source current and filter current for phase A	71
5.9	Capacitor voltage and capacitor current	72
5.10	FFT Analysis for load current	72
5.11	FFT Analysis for source current	73
5.12	DC machine with variable load torque	73
5.13	Waveform of the torque applied to dc machine	74
5.14	DC Machine loading Load current	74
5.15	DC Machine loading Source current before and after compensation	75
5.16	DC Machine loading Source voltage, source current and filter current	75
5.17	DC Machine loading Capacitor voltage and capacitor current	76
5.18	DC Machine loading FFT Analysis for load current	76
5.19	DC Machine loading FFT Analysis for source current	77
5.20	MATLAB model for Series active power filter	78
5.21	DVR Reference current generation	79
5.22	DVR Pulse generation diagram	79
5.23	Source voltage containing harmonics	80
5.24	Load voltage before and after compensation	80
5.25	Load current	81
5.26	FFT Analysis for source voltage	81
5.27	FFT Analysis for load voltage	82
5.28	DC machine loading Load voltage before and after compensation	82

LIST OF FIGURES

5.29	DC machine loading Load current	83
5.30	DC machine loading FFT Analysis for load voltage	83
5.31	MATLAB model for Unified power quality conditioner (UPQC)	85
5.32	Load voltage before and after compensation	86
5.33	Compensating voltage for phase A	87
5.34	Load current	87
5.35	Source current before and after compensation	88
5.36	Compensating current for phase A	88
5.37	Capacitor Voltage	89
5.38	FFT Analysis for source voltage	89
5.39	FFT Analysis for load voltage	90
5.40	FFT Analysis for load current	90
5.41	FFT Analysis for source current	91
5.42	DC machine loading Load voltage before and after compensation	91
5.43	Compensating voltage for phase A	92
5.44	Load current	92
5.45	Source current before and after compensation	93
5.46	Compensating current for phase A	93
5.47	Capacitor Voltage	94
5.48	FFT Analysis for load voltage	94
5.49	FFT Analysis for load current	95
5.50	FFT Analysis for source current	95
