## Synopsis

Acknowledgements	xii
1 Introduction	1
1.1 General . . . . .	1
1.2 Restructured electrical power system and its models . . . . .	3
1.2.1 Generating Companies (GENCOS) . . . . .	4
1.2.2 Transmission Companies (TRANSCOs) . . . . .	4
1.2.3 Distribution Companies (DISCOs) . . . . .	4
1.2.4 Customers . . . . .	4
1.2.5 Market Operator . . . . .	5
1.2.6 Independent System Operator (ISO) . . . . .	5
1.2.7 Aggregators . . . . .	6
1.2.8 Brokers . . . . .	6
1.2.9 Retail Companies (RETAILCOS) . . . . .	6
1.2.10 Energy market . . . . .	8
1.2.11 Ancillary service market . . . . .	8
1.2.12 Transmission market . . . . .	9
1.2.12.1 PoolCo model . . . . .	9
1.2.12.2 Bilateral Contract model . . . . .	9
1.2.12.3 Hybrid model . . . . .	11
1.3 Main FACTS controller . . . . .	11
1.3.1 Thyristor Controlled Series Compensator (TCSC) . . . . .	13

1.3.1.1	Operating modes of TCSC . . . . .	14
1.4	State-of-the-Art . . . . .	18
1.4.1	Optimal placement of FACTS for maximization of TTC and minimization of losses . . . . .	19
1.4.2	Social welfare maximization . . . . .	20
1.4.3	Impact of FACTS devices on pricing, wheeling charges and secure bilateral transactions . . . . .	22
1.4.4	Congestion management . . . . .	23
1.5	Motivation . . . . .	24
1.6	Thesis Organization . . . . .	27
<b>2</b>	<b>Particle Swarm Optimization (PSO)</b>	<b>29</b>
2.1	General . . . . .	29
2.2	Step by step procedure for implementing PSO . . . . .	32
2.3	Literature review:PSO applications in Electric power systems . . . . .	33
2.3.1	Economic load dispatch . . . . .	33
2.3.2	Reactive power management . . . . .	35
2.3.3	Optimal power flow . . . . .	36
2.3.4	Power System Controller Design . . . . .	37
2.3.5	Neural Network Training . . . . .	38
2.3.6	Price forecasting and Load forecasting . . . . .	38
2.3.7	Other Power System Areas . . . . .	39
2.4	Advantages of PSO . . . . .	42
2.5	Disadvantages of PSO . . . . .	42
2.6	Conclusions . . . . .	43
<b>3</b>	<b>Optimal placement of Thyristor Controlled Series Compensator (TCSC) for Total Transfer Capability (TTC) enhancement</b>	<b>44</b>
3.1	Introduction . . . . .	44
3.2	TTC definitions and related terms . . . . .	46
3.2.1	Available Transfer Capability (ATC) . . . . .	46
3.2.2	Total Transfer Capability (TTC) . . . . .	47

3.2.2.1	Scheduling Horizon (Real-time): . . . . .	47
3.2.2.2	Operating horizon (Pre-schedule/Day ahead) . . . . .	48
3.2.2.3	Planning horizon . . . . .	48
3.2.3	Transmission Reliability Margin (TRM) . . . . .	49
3.2.4	Existing Transmission Commitments (ETC) . . . . .	49
3.2.5	Capacity Benefit Margin (CBM) . . . . .	49
3.2.6	Curtailability . . . . .	50
3.2.7	Recallability . . . . .	50
3.3	Calculation of total transfer capability and some technical challenges . . . . .	50
3.3.1	Voltage limits . . . . .	51
3.3.2	Stability limits . . . . .	51
3.3.3	Parallel path flows . . . . .	52
3.3.4	Maintaining voltage levels . . . . .	52
3.3.5	Projected customer demand . . . . .	52
3.3.6	Contingency analysis . . . . .	53
3.3.6.1	General . . . . .	53
3.3.6.2	Operating criteria and study standards . . . . .	53
3.4	Static modeling of Thyristor Controlled Series Compensator (TCSC) . . . . .	54
3.5	Proposed PSO based algorithm to optimally locate TCSC for maximizing TTC and minimizing losses . . . . .	56
3.5.1	Optimal power flow model . . . . .	57
3.5.2	Modeling of bilateral and multilateral transactions . . . . .	60
3.5.3	Contingency analysis . . . . .	60
3.5.4	Step by step algorithm to optimally locate TCSC for maximizing TTC and minimizing losses using PSO . . . . .	61
3.6	Results and Discussions . . . . .	62
3.6.1	IEEE 30-bus test system . . . . .	62
3.6.2	UPSEB 75-bus test system . . . . .	65
3.6.3	Effect of PSO parameters on the value of TTC . . . . .	68
3.7	Conclusions . . . . .	70

<b>4 Optimal placement of Thyristor Controlled Series Compensator (TCSC) for Social Welfare enhancement</b>	<b>72</b>
4.1 Introduction . . . . .	72
4.2 OPF formulation and swarm initialization in PSO . . . . .	80
4.2.1 Initialization of a population . . . . .	81
4.2.2 Installation of a TCSC . . . . .	82
4.2.3 Power flow . . . . .	82
4.2.4 Optimal power flow problem formulation . . . . .	83
4.3 Social welfare of various market participants . . . . .	86
4.4 PSO based algorithm to optimally locate TCSC to maximize social welfare .	87
4.5 Results and Discussions . . . . .	88
4.5.1 IEEE 6-bus test system . . . . .	89
4.5.1.1 Effect of PSO parameters on convergence . . . . .	92
4.5.2 IEEE 30-bus test system . . . . .	94
4.5.3 UPSEB 75-bus test system . . . . .	99
4.6 Conclusions . . . . .	103
<b>5 Impact of optimally placed TCSC on transmission pricing, wheeling charges and bilateral transactions</b>	<b>104</b>
5.1 Introduction . . . . .	104
5.2 OPF formulation and swarm initialization in PSO . . . . .	107
5.2.1 Initialization of a population . . . . .	107
5.2.2 Installation of a TCSC . . . . .	107
5.2.3 Power flow . . . . .	109
5.2.4 Optimal power flow problem formulation . . . . .	109
5.3 Active and Reactive power spot prices for generators . . . . .	112
5.4 Active and Reactive power spot prices for consumers . . . . .	114
5.5 Basic concept of wheeling charges . . . . .	115
5.5.1 Embedded cost based pricing: . . . . .	116
5.5.2 Incremental cost based pricing: . . . . .	116
5.5.3 Combination of above two methods: . . . . .	116

5.5.4	Flat Fee method: . . . . .	116
5.5.5	Postage Stamp method: . . . . .	117
5.5.6	MW-Mile method: . . . . .	117
5.5.7	Contract path method: . . . . .	117
5.5.8	Rated system path method: . . . . .	117
5.5.9	Location Based Marginal (LBM) costing: . . . . .	117
5.6	Computation of wheeling rates . . . . .	118
5.7	Basics of bilateral transaction . . . . .	119
5.8	Results and Discussions . . . . .	120
5.8.1	IEEE 6-bus test system . . . . .	121
5.8.2	IEEE 30-bus test system . . . . .	129
5.8.3	UPSEB 75-bus test system . . . . .	133
5.9	Conclusions . . . . .	138
<b>6</b>	<b>Sensitivity and PSO based congestion management</b>	<b>140</b>
6.1	Introduction . . . . .	140
6.2	Formulation of sensitivity factors . . . . .	141
6.2.1	Optimal power flow problem formulation . . . . .	144
6.2.2	PSO based algorithm for congestion management . . . . .	148
6.3	Results and Discussions . . . . .	149
6.3.1	IEEE 30-bus test system . . . . .	150
6.3.1.1	Statistical results and convergence characteristic of PSO . .	154
6.3.2	UPSEB 75-bus test system . . . . .	155
6.4	Conclusions . . . . .	160
<b>7</b>	<b>Conclusions</b>	<b>162</b>
7.1	General . . . . .	162
7.2	Summary of Important Findings . . . . .	163
7.3	Scope for future research . . . . .	166
