

INDEX

Abstract	i
Nomenclature	iv

Chapter	Contents	Page
1	Introduction	1
	1.1 Organization of Thesis	8
2	Review of Literature	10
	2.1 Investigations before 'Energy Crisis of 1970s'	11
	2.1.1 Diesel Engine and Diesel Fuel	11
	2.1.2 Hydrogen as Alternative Fuel	14
	2.2 Investigations after 'Energy Crisis of 1970s'	16
	2.2.1 Experimental Investigations on Hydrogen Supplementation	16
	2.2.1.1 Hydrogen Direct Injection Technique	18
	2.2.1.2 Hydrogen Indirect Injection / Induction Techniques	28
	2.2.1.3 Hydrogen and Other Fuel Combinations	44
	2.2.1.3.1 Exhaust Gas Recirculation (EGR) with Hydrogen-Diesel	44
	2.2.1.3.2 Diluents with Hydrogen – Diesel	48
	2.2.1.3.3 Biodiesel with Hydrogen-Diesel	50
	2.2.1.3.4 Additives with Hydrogen-Diesel or with Diesel Alone	52
	2.2.2 Theoretical Investigations	55
	2.2.2.1 Modeling and Simulation	56
	2.2.2.2 Artificial Neural Network Modeling	64
	2.2.2.3 Genetic Algorithm Optimization	68
	2.3 Scope for the Present Investigation	72
	2.3.1 Objectives of the Present Study	83
3	Experimental Study	85
	3.1 Description of the Experimental Set Up	86
	3.1.1 Diesel Engine	86
	3.1.2 Measurement Systems for Thermal Performance Evaluation	91
	3.1.2.1 Input Control Variables	91
	3.1.2.2 Environmental Variables	100
	3.1.2.3 Response Variables	101
	3.1.2.3.1 Measurement Systems for Thermal Performance Evaluation	101
	3.1.2.3.2 Measurement System for Constituents of Engine Exhaust Emission	106
	3.1.2.4 Data Acquisition System	107

Chapter	Contents	Page
	3.2 Experimental Procedure	107
	3.2.1 Diesel Oil only as Fuel	108
	3.2.2 Diesel Oil Supplemented with Indirect Hydrogen Induction in Manifold	108
	3.2.3 Diesel Oil with Additive and Supplemented with Indirect Hydrogen Induction in Manifold	109
	3.2 Experimental Programme	109
	3.3.1 Comparative Study of Diesel Engine Performance & Emission with and without Hydrogen Induction	110
	3.3.1.1 Conventional Test	110
	3.3.1.2 Tests on Hydrogen Induction with Diesel Fuel	110
	3.3.1.3 Tests on Hydrogen Induction with Diesel + DMM Fuel Blends	111
	3.4 Results and Discussion	114
	3.4.1 Using Diesel Oil as Fuel	114
	3.4.1.1 Thermal Performance	114
	3.4.1.2 Constituents of Exhaust Gas Emission	121
	3.4.2 Hydrogen Induction in the Inlet Manifold	129
	3.4.2.1 Thermal Performance Evaluation	130
	3.4.2.2 Constituents of Exhaust Gas Emission	152
	3.4.3 Hydrogen Induction Coupled with Direct Injection of Diesel / DMM Blend	177
	3.4.3.1 Thermal Performance	178
	3.4.3.2 Exhaust Gas Emission Constituents	186
	3.4.4 Comparison between Various Options Investigated	194
	3.4.4.1 Thermal Performance	195
	3.4.4.2 Gas Emission Constituents	204
	3.5 Comparison with Earlier Investigations	215
	3.5.1 Optimum Hydrogen Induction Rate	215
	3.5.2 Thermal Performance Parameters	216
4	Modeling & Optimization	223
	4.1 Artificial Neural Network	225
	4.1.1 Neural Network Modeling Approach	226
	4.1.2 Selection of Modeling Tool	227
	4.1.3 Modeling Strategy	230
	4.1.4 ANN Model for Thermal Performance	234
	4.1.5 ANN Model for Exhaust Gas Emission Constituents	241
	4.1.6 Results and Discussion	247
	4.2 Genetic Algorithm for Optimization	249
	4.2.1 Single Objective Optimization	250
	4.2.1.1 Results and Discussion	253
	4.2.2 Multi Objective Optimization	264
	4.2.2.1 Results and Discussion	266

Chapter	Contents	Page	
		271	
5	Conclusion		
	Appendix I	Calibration Certificates	275
	Appendix II	Experimental Data	279
	Appendix III	Uncertainty Analysis	298
	Appendix IV	Sample Calculation	306
	Appendix V	Genetic Optimization Scenario	310
	References		316
