

LIST OF TABLES

Table	Title	Page
1.1	Iron ore reserves in India (as on 01. 04. 2000) in Mt	3
1.2	Coal reserves in India (as on January 01, 2005) in Bt	3
2.1	Net heat release from coal at different PCD	37
2.2	Energy consumption in ironmaking processes	57
2.3	Characteristic features of some smelting reduction processes	59
2.4	Laboratory experimental set-up adopted by various investigators in smelting reduction studies	72
2.5	Published work on direct reduction of iron oxides by carbonaceous materials	76
3.1	Input and output (mass balance) of smelting processes	90
4.1	Size analysis of iron ore	110
4.2	Size analysis of coal	110
4.3	Analysis of iron ore	111
4.4	Analysis of Noamundi iron ore	111
4.5	Proximate analyses of coals	111
4.6	Analyses of coal ash	111
4.7	Analysis of lime	111
4.8	Composition of iron ore-coal composite pellets	114
4.9	EDAX analysis of oven dried iron ore-coal composite pellets	126
4.10	Physical properties (density and porosity) of pellets	128
4.11	Dry strength of composites briquettes	121
4.12	Dry strength of composite pellets	122
4.13	Variables for non-isothermal reduction of composite pellets	130
4.14	Variables for kinetics of smelting of composite pellets	132
5.1	Results of TG-DTA for pyrolysis of coal	139
5.2	TG results for composite pellets	143
5.3	TG results for non-isothermal reduction of composite pellets	156
5.4	Results for final degree of reduction of composite pellets	148
5.5	Comparison of final degree of reduction for composite pellets	151
5.6	Comparison of degree of reduction for composite pellets	152
6.1	Results for dissolution of composite pellets in liquid metal bath	158
6.2	Results of composite pellet dissolution in induction furnace	163
6.3	Results of chemical analysis of samples	165
6.4	Results of X-ray studies	167
6.5	Summary of SEM observation of reduced pellets	170
