| <b>SYNOPSIS</b>   | <b>iv</b>   |
| <b>ACKNOWLEDGEMENTS</b>   | <b>viii</b> |
| <b>List of Figures</b>  | <b>xi</b>   |
| <b>List of Tables</b>   | <b>xv</b>   |
| <b>1 INTRODUCTION</b>   | <b>1</b>    |
| 1.1 General . . . . .   | 1           |
| 1.2 State of The Art . . . . .  | 2           |
| 1.3 Motivation . . . . .  | 9           |
| 1.4 Thesis Organization . . . . .   | 9           |
| <b>2 DESIGN AND IMPLEMENTATION OF A 3 PHASE PWM FOR 3 PHASE IDH</b>               | <b>11</b>   |
| 2.1 Introduction . . . . .  | 11          |
| 2.2 Principle of Space Vector Modulation . . . . .                                | 12          |
| 2.3 SVM Technique for Three Phase Inverter . . . . .                              | 18          |
| 2.3.1 Six space vectors of three phase inverter . . . . .                         | 19          |
| 2.3.2 Determination of switching times in the proposed SVM . . . . .              | 20          |
| 2.4 Steps of Design for SVM Generation . . . . .                                  | 23          |
| 2.4.1 Determination $V_d$ , $V_q$ , $V_{ref}$ and angle ( $\alpha$ ) . . . . .    | 24          |
| 2.4.2 Determination time duration $T_1$ , $T_2$ , $T_0$ . . . . .                 | 25          |
| 2.4.3 Determination of the switching time for MOSFET ( $S_1$ to $S_6$ ) . . . . . | 26          |
| 2.5 Simulation Results . . . . .  | 26          |
| 2.6 Conclusions . . . . .   | 40          |

## CONTENTS

|   |            |
|---|------------|
| <b>3 CONFIGURATION PROPOSALS FOR AN OPTIMAL ELECTRO</b>           |            |
| <b>MAGNETIC COUPLING IN IDH SYSTEM</b>                            | <b>41</b>  |
| 3.1 Introduction . . . . .  | 41         |
| 3.2 Impedance Parameters for an IDH System . . . . .              | 42         |
| 3.3 Conducting Material . . . . .                                 | 48         |
| 3.3.1 Wave propagation in conducting material (CM) . . . . .      | 49         |
| 3.3.2 Mathematical model for CM (Steel) . . . . .                 | 49         |
| 3.4 Non-Conducting Material . . . . .                             | 53         |
| 3.4.1 Wave propagation in non-conducting material (NCM) . . . . . | 54         |
| 3.4.2 Mathematical model for NCM (Lemon) . . . . .                | 55         |
| 3.5 Depth of Penetration . . . . .                                | 59         |
| 3.6 Wave Reflection and Transmission . . . . .                    | 60         |
| 3.7 Operating Parameters . . . . .                                | 61         |
| 3.8 Numerical Solution . . . . .                                  | 62         |
| 3.9 Simulation Results . . . . .                                  | 63         |
| 3.10 Conclusions . . . . .  | 82         |
| <b>4 SIMULATION RESULTS FOR THE IDH</b>                           | <b>83</b>  |
| 4.1 Introduction . . . . .  | 83         |
| 4.2 Principle of Induction Dielectric Heating . . . . .           | 84         |
| 4.3 System Considerations . . . . .                               | 85         |
| 4.3.1 Considerations of coil design . . . . .                     | 85         |
| 4.3.2 Coil specification . . . . .                                | 87         |
| 4.3.3 Power supply requirements . . . . .                         | 87         |
| 4.4 Operation of Proposed Inverter . . . . .                      | 89         |
| 4.5 Analysis of Three Phase Inverter . . . . .                    | 90         |
| 4.6 Calculation of Switching Frequency . . . . .                  | 97         |
| 4.7 Calculation of Matching Coil Value . . . . .                  | 98         |
| 4.8 Simulation Results . . . . .                                  | 99         |
| 4.9 Conclusions . . . . .   | 107        |
| <b>5 EXPERIMENTAL VERIFICATION</b>                                | <b>108</b> |
| 5.1 Introduction . . . . .  | 108        |
| 5.2 Experimental System . . . . .                                 | 108        |

|                     |  |            |
|---------------------|--|------------|
| 5.2.1               | Determination of control frequency . . . . . | 111        |
| 5.3                 | Protection Considerations . . . . .          | 114        |
| 5.4                 | Component Ratings . . . . .                  | 115        |
| 5.5                 | Advantages . . . . .                         | 115        |
| 5.5.1               | Throughput . . . . .                         | 115        |
| 5.5.2               | Quality . . . . .                            | 115        |
| 5.5.3               | Costs . . . . .                              | 116        |
| 5.6                 | Experimental Results . . . . .               | 116        |
| 5.7                 | Conclusions . . . . .                        | 137        |
| <b>6</b>            | <b>CONCLUSIONS</b>                           | <b>138</b> |
| 6.1                 | General . . . . .                            | 138        |
| 6.2                 | Summary of Important Findings . . . . .      | 139        |
| 6.3                 | Scope for Further Research . . . . .         | 141        |
