

ACKNOWLEDGMENTS

It is with a deep sense of gratitude that I express my sincere thanks to my esteemed thesis supervisor, Prof.(Mrs.) L.A.Reddy, who initiated me to the subject of the present study. Without her able guidance, encouragement and numerous critical suggestions, this dissertation would not have taken its present form. I am also indebted to Prof.M.M.Dadi, Dean, Faculty of Management Studies, M.S.University, for always granting me time to discuss econometric techniques, in spite of his busy schedule.

I am grateful to Prof.Radhakrishnan, Director, Centre for Economic & Social Studies (CESS), Hyderabad, for his interest in my work and for his valuable suggestions. Special thanks are due to Prof.J.V.M.Sarma of CESS who was remarkably patient in explaining the causality testing procedure to me. I am also thankful for being granted the use of the library facilities at CESS as well as at the National Institute of Public Finance & Policy (NIPFP), New Delhi and Osmania University, Hyderabad.

I would also like to express my regards to my parents and to my mother-in-law, whose assistance in every respect was always forthcoming. My sister, Ratna, and my cousins, Santosh and Vivek, were also a great help to me on numerous occasions.

I can not really find words to express my wholehearted appreciation for my husband, Shrikant, who was a constant source of inspiration. He encouraged and nagged me endlessly to finish my dissertation. I also have no hesitation in admitting that this dissertation would not have been possible without the cooperation of our little daughter, Nandita, who was most accommodating during my busy times. It would be only appropriate to dedicate my dissertation to these two people.
