LIST OF TABLES

Table	Title	Page
2.1	Various methods of perform fabric manufacture	13
2.2	Characteristics of various types of textile preforms	17
2.3	Applications of thermoplastic composites	51
2.4	Ranges of Resistivity for different materials	64
3.1	Technical Specification of Hollow Spindle Wrapping Machine	73
3.2	Wrap Level of Yarn Using Various Combination of Gears	76
3.3	Specifications of Various Parent Yarns Use for Preparing Hybrid Yarn	77
3.4	Various Hybrid Yarn Made by Hollow Spindle Wrapping Process	78
3 5	Various Characteristics of Wrapped Hybrid Yarns	81
4.1	Specifications of Various Parent Yarns Used for Hybrid Yarns	93
4.2	Specifications of Conductive Hybrid Yarns	95
4.3	Specifications of Knitted Preform Fabrics	96
4.4	Various Properties of Parent Yarn and Conductive Hybrid Yarn	105
4.5	Contribution of Parent Yarn Strength in Conductive Hybrid Yarn at 10 Mm Elongation of Component Yarns	108
4.6	Mass Proportion(%) of Component Yarns in Various Hybrid Yarn	109
4.7	Fabric Thickness	110
4.8	Tensile Strength and Flexural Rigidity	111
4.9	Dielectric Strength of Various Laminates	112
4.10	Resistivity of Various Laminates	113
5.1	The Raw Material Characteristics	118

5.2	Various Commingled Hybrid Yarns Produced Using Different Yarn Passages and Process Parameters	127
5.3	Mechanical Characteristics of Hybrid Yarns at Various Process Parameters	129
5.4	Mingling Characteristic of Hybrid Yarn Produced Using Various Parameters	134
6.1	Specifications of Parent Yarns Used for Hybrid Yarn	160
6.2	Processing Parameters Used for Various Commingled Hybrid Yarns	161
6.3	Various Mingled Hybrid Yarns Made Using Different Proportions of Glass and Polypropylene	161
6.4	Effect of Nozzle Type on Characteristics of Commingled Hybrid Yarn	164
6.5	Properties of Hybrid Yarns With Different Glass/ Polypropylene content	174
7.1	Three Factors and Level OF Experiment Design	183
7.2	Various Experimental Runs of Factor Level Combinations	184
7.3	Properties of glass/polypropylene Commingled Hybrid Yarn	185
7.4	Value of Constants for Registration Equation	185
7.5	P-Values of Regression Equation	186
7.6	Regression Equation and Regression Coefficients (R^2)	186
7.7	Properties of Glass/Polypropylene Hybrid Yarn Produced Using Different Manufacturing Techniques	203
