

ACKNOWLEDGEMENTS

Although this doctoral thesis bears my name, it has been the result of concerted and cumulative efforts of others to whom I owe debts of gratitude that cannot be repaid in a few paragraphs. My first thanks must go to Professor P. R. Joshi, my research guide and mentor, for his support, encouragement, and advice during every stage of my research. The best advisor and teacher I could have wished for, he is actively involved in the work of all his students, and clearly always has their best interests in mind. I would like to gratefully acknowledge the enthusiastic supervision. His comments and suggestions were always outstanding. The constructive criticisms have strengthened my work in more ways than I can count. His unflinching trust in me and my work has boosted my confidence greatly and the efforts he put in managed to make this journey a rewarding one, both in the academic and personal fields. This study benefited from conversations with several persons: Professor Bhavna Kantawala, Professor A. S. Rao, Dr. T. R. Bishnoi and Shri D. K. Oza. I am proud to have had the opportunity to learn from them. Dr. V. O. Thomas, Department of Mathematics, Faculty of Science, deserves special mention. It was his crucial clarifications that helped me understand the methodology and models used in this work. I have also benefitted tremendously from my interactions with Professor K. Muralidharan and Professor V. A. Kalamkar, Department of Statistics, Faculty of Science.

I am also highly grateful to Prof. R. J. Shah, Dean, Faculty of Arts, The Maharaja Sayajirao University of Baroda, for providing all possible help and necessary facilities during my research work.

Special thanks also go to Atulya Shantilal, who first got me interested into this particular subject. The research upon which this dissertation is based was made possible through support and guidance from Professor H. B. Desai, Director (Retd.), Indian Institute of Foreign Trade, New Delhi. He initiated me on the path to understanding the mechanics of maritime trade. To a person with absolutely no knowledge about shipping and ports, he showed a remarkable patience and through long hours of discussions and elucidations, gave me an understanding of the myriad terms and processes that led to my getting a clear picture as to what goes into conducting maritime trade. I take the opportunity here to heartily thank Professor

Kevin Cullinane, Director, Transport Research Institute, Napier University, Scotland, Professor Timothy Coelli, University of Queensland, Australia, Professor Ravindra Dholakia, Indian Institute of Management, Ahmedabad and Dr. M. Mallikarjun, Nirma University, Institute of Management, who all found time out of their extremely busy schedules to help and guide me through the various aspects of efficiency and productivity analysis. Professor Robert Stahlbock, University of Hamburg, Germany, was very lavish with his encouragements and emails. Professor Richard Lowry, Vassar College, U.S.A., was prompt in explaining the various statistical tools that I used. Useful information was provided by Ms. Isabel Berclaz of UNCTAD. Dr. Samir Joshi, Department of Business Economics, Faculty of Commerce, was always ready with his words of advice and encouragement.

Mr. Bhadresh Kothari, my cousin supported me a lot in the initial phase of this research for which I am thankful to him. There are also many people in the Indian port sector, who were willing and prompt in providing help and information. I highly appreciate their contribution. Ms. D. Mythili, Director (Ports), Transport Research Wing, Ministry of Shipping, Road Transport and Highways, Government of India, though a very busy person, always found time to take my calls and field all my queries. I take the opportunity here to heartily thank her. Sharad Dharan, Gujarat Maritime Board, Gujarat, Jaya Sett, Asst. Director, Planning and Research, Kolkatta Port, Sudipta Chakraborty, Haldia Dock Complex, Mr. Avinash, Nhava Sheva International Container Terminal, Sushmita Shukla, Chennai Container Terminal Ltd., Chennai, Maheswari Raju, India Gateways Terminal Pvt. Ltd., Kochi, Mr. Anil Narayanan, Visakha Container Terminal Pvt. Ltd., Capt. Sai Subramanian, Mundra International Container Terminal Ltd., Mundra, Vishal Chaudhary, Gujarat Pipavav Port Ltd., Pipavav, Mr. Rajendran, Tuticorin Port Terminal and Mr. RKB Yadav, Jawaharnal Nehru Port Container Terminal have all helped me gather the relevant port statistics. I am highly indebted to them.

Special mention must be made of Rajesh S. V. (Department of Archaeology) and Thomson K. Alex (Department of Economics), my fellow research scholars and special friends, who have in fact, become family to me. They both belong to that rare cadre of people who would leave aside their work to help anybody and everybody at any time of the day (that is because, as I have often told them, they are both totally

mad!). Their tremendous and untiring help is what has gone into making this thesis look the way it does today. Bhupesh Pathak, with his multifarious advices on life, kept me rooted to ground reality. Arti Khabia, my dear friend, has always been of assistance whenever and wherever statistics confounded me.

And it is my family, especially my parents, who I have to thank for encouraging me to pursue my dreams, whatever and however strange they may have been. Ultimately, it has been their love, support, and dedication which have made this dissertation possible. I know that my mother specially, has endured long restless nights, worrying and caring about me. I can never fully repay her love but hope to make a little contribution through the completion of this thesis. My gratitude goes to my father for giving me the freedom to pursue my lengthy academic work. It was his, sometimes silent and sometimes vociferous, support that sees me today at a place where he has always wanted to see me. He has always been my pillar of support on which I could lean whenever I have felt the need to. Bhaylu and Pinky also deserve my thanks for their acceptance of what and who I am.

Lastly, it is my lovely and lively daughter Disha (my very own Naanu) who has been the source of my strength throughout this tiring, though exhilarating journey. Her jokes, laughter and playfulness have always enlivened my spirits. She has borne my neglect, tolerated long separations and endured my long sittings at the desk, dealt with my mood swings and all those things that go into doing Ph.D. work, with her unusual sensitivity and love. She has soothed me when I needed it, fed me when I was too busy with work to eat, and put me to sleep when I was so exhausted that I couldn't sleep. She became my 'mother' this past one year during which I undertook my analysis and writing. If it wasn't for her, maybe this thesis would never have got completed.

Fenil A. Shah
