

## CONTENTS

### SUMMARY OF THE THESIS

<u>CHAPTER</u>		<u>PAGE NO.</u>
I.	INTRODUCTION	1 - 24
1.1	Resume	1
1.2	Scattering processes	2
1.3	Cross sections	5
1.4	Experimental aspects	8
1.5	Applications of the study of electron scattering by atoms and molecules	16
1.6	Approach to the problems taken up in this thesis	20
II.	RELEVANT THEORETICAL FORMULATIONS	25 - 77
2.1	Introduction	25
2.2	High energy methods	31
2.3	The first Born approximation	33
2.4	The modified Born approximation	35
2.5	The second Born approximation	39
2.6	Glauber approximation	41
2.7	Glauber eikonal series method	45
2.8	Two-potential eikonal approximation	49
2.9	Eikonal Born series method	52
2.10	The high energy higher order Born approximation	54
2.11	Results and discussion	63
2.12	HHOB approximation for the static potentials of the target atoms	66
	Tables (2.1 to 2.4)	72
	Figures (2.1 to 2.3)	75

<u>CHAPTER</u>	<u>PAGE NO.</u>
V. ELECTRON SCATTERING FROM ALKALI ATOMS	309 - 361
5.1 Introduction	309
5.2 First Born approximation	318
5.3 ENa process in the GES method	323
5.4 Inclusion of polarisation effect	330
5.5 Two-potential Born approximation	335
5.6 Two-potential formulation including higher order Born terms	340
5.7 ENa process in the static potential	343
5.8 More about the core approximation of ENa process	348
Tables (5.1 to 5.3)	352
Figures (5.1 to 5.7)	355
VI. SUMMARY AND CONCLUSIONS	362 - 379
