|------------------------------------------------------------------------------------------------|-----------|
| Certificate                                                                                    | ii        |
| Acknowledgement                                                                                | iii       |
| List of Figures                                                                                | viii      |
| List of Tables                                                                                 | x         |
| Abstract                                                                                       |           |
| <br>                                                                                           |           |
| <b>Chapter 1. Overview</b>                                                                     | <b>1</b>  |
| <b>Chapter 2. Background</b>                                                                   | <b>12</b> |
| 2.1. Conventional Methods                                                                      | 12        |
| 2.1.1. Gain Scheduling                                                                         | 13        |
| 2.1.2. Feedback Linearization                                                                  | 13        |
| 2.1.3. Variable Structure Control techniques                                                   | 14        |
| 2.1.4. Sliding Mode Control                                                                    | 14        |
| 2.1.5. Back-stepping Approach                                                                  | 15        |
| 2.2. Intelligent Methods                                                                       | 15        |
| 2.2.1. Expert Systems                                                                          | 16        |
| 2.2.2. Fuzzy Control                                                                           | 17        |
| 2.2.3. Neural Control                                                                          | 18        |
| 2.2.4. Neuro-Fuzzy Control                                                                     | 19        |
| 2.2.5. Evolutionary Computation                                                                | 20        |
| 2.3. Design of Fuzzy Systems                                                                   | 22        |
| 2.3.1. Fuzzy Controller Design                                                                 | 23        |
| 2.3.2. Adaptive Robust Fuzzy Control of Nonlinear Systems                                      | 24        |
| 2.3.3. Integrating membership functions and fuzzy rule sets<br>from multiple knowledge sources | 26        |
| 2.3.4. Analysis and Design of Fuzzy Controller Based on Observer                               | 27        |
| 2.3.5. Fuzzy Observer-Based Control of Nonlinear Systems                                       | 27        |
| 2.3.6. Design and analysis of a fuzzy logic controller                                         | 28        |

|                                                                                                    |    |
|----------------------------------------------------------------------------------------------------|----|
| 2.3.6.1.Design of Simple Fuzzy Controller                                                          | 29 |
| 2.3.6.2.Choosing Fuzzy Controller Inputs and Outputs                                               | 30 |
| 2.3.6.3.Putting Control Knowledge into Rule-Bases                                                  | 32 |
| 2.3.6.4.Fuzzy Quantification of Knowledge                                                          | 37 |
| 2.3.6.5.Matching: Determining Which Rules to Use                                                   | 40 |
| 2.3.6.6.Inference Step: Determining Conclusions                                                    | 42 |
| 2.3.6.7.Converting Decisions into Actions                                                          | 44 |
| 2.3.6.8.MATLAB Simulation of Fuzzy Controller<br>for Inverted Pendulum                             | 44 |
| 2.3.7. Sliding Mode Observers for Takagi–Sugeno Fuzzy Systems                                      | 45 |
| 2.3.8. LMI-Based Design of T-S Fuzzy Estimator based Controllers                                   | 47 |
| 2.3.9. Fuzzy Regulators and Fuzzy Observers:<br>Relaxed Stability Conditions and LMI-Based Designs | 47 |
| 2.3.10. Separation principle: for the analysis &<br>design of fuzzy controller & observer          | 48 |
| 2.3.11. Design of Fuzzy Controller – Stability concerns                                            | 54 |
| 2.3.11.1. TSK Fuzzy Plant Model, Fuzzy Controller<br>and Fuzzy Control System                      | 55 |
| 2.3.11.2. Stability Analysis                                                                       | 56 |
| 2.3.12. Fuzzy Controller - Real Time Implementation Issues                                         | 57 |
| <b>Chapter 3. Evolutionary Computations</b>                                                        | 58 |
| 3.1. Evolutionary Algorithms                                                                       | 58 |
| 3.2. Why Evolutionary Algorithms?                                                                  | 62 |
| 3.3. Basics of Evolutionary Algorithms                                                             | 63 |
| 3.4. Terminology of Evolutionary computation                                                       | 65 |
| 3.5. Encoding, Mutation and Crossover                                                              | 67 |
| 3.5.1. Numeric Search domains                                                                      | 68 |
| 3.5.2. Function Search domains                                                                     | 74 |
| 3.6. Population Initialization                                                                     | 75 |
| 3.7. Selection Operators                                                                           | 77 |
| 3.7.1. Tournament selection                                                                        | 78 |

|                                                                                   |            |
|-----------------------------------------------------------------------------------|------------|
| 3.7.2. Proportional selection or Roulette wheel selection                         | 79         |
| 3.7.3. Ranking Selection                                                          | 79         |
| 3.7.4. Steady State Selection                                                     | 80         |
| 3.7.5. Manual Selection                                                           | 80         |
| 3.8. Use of EA for Design of Intelligent controllers                              | 80         |
| 3.8.1. Fuzzy Controllers                                                          | 80         |
| 3.8.2. Neural Controllers                                                         | 81         |
| 3.9. Stability and Optimality in GA based control                                 | 82         |
| 3.9.1. Convergence of the GA controller Population                                | 83         |
| 3.9.2. Stability of GA controllers                                                | 83         |
| 3.9.3. Optimality of the GA controllers                                           | 85         |
| 3.10. Simulation of PID Controller using GA                                       | 86         |
| 3.11. Summary                                                                     | 90         |
| <b>Chapter 4. Evolutionary Computational Techniques</b>                           | <b>91</b>  |
| 4.1. Real Time constraints in Intelligent Control                                 | 91         |
| 4.1.1. Intelligent control                                                        | 92         |
| 4.1.2. Real Time Control                                                          | 93         |
| 4.2. Structure and Parameter Tuning of Neural Network                             | 94         |
| 4.3. Fuzzy Tuned Neural Network                                                   | 95         |
| 4.4. Design of Fuzzy Controller – A Genetic Algorithm Approach                    | 96         |
| 4.5. GA based methods for Constructing TSK Fuzzy Rules                            | 97         |
| 4.6. Self Learning Fuzzy Logic Controllers using GA with reinforcement            | 99         |
| 4.7. Evolutionary design of Fuzzy Rule Base                                       | 100        |
| 4.8. Hierarchical Evolutionary approach to Design Fuzzy Systems                   | 101        |
| 4.9. Evolutionary fuzzy Systems                                                   | 103        |
| 4.10. Summary                                                                     | 106        |
| <b>Chapter 5. Real time Applications of Evolutionary Computational Techniques</b> | <b>107</b> |
| 5.1. GA based Fuzzy Logic controller – GAFLC for nonlinear systems                | 107        |
| 5.2. Genetic Reinforcement Fuzzy Logic Controller – GRFLC                         | 109        |
| 5.3. Multi-objective Fuzzy Genetic Algorithm for control system design            | 111        |

|                                                                                                   |            |
|---------------------------------------------------------------------------------------------------|------------|
| 5.4. Optimal Fuzzy control using Genetic Algorithm for Spindle Motor                              | 114        |
| 5.5. Evolutionary Design for Robust Flight Control                                                | 116        |
| 5.6. Self Tuning Neuro-Fuzzy Controller by GA (NFCGA)<br>for Coupled Tank level control           | 118        |
| 5.7. Genetic Programming based Design of Fuzzy logic controller<br>for Mobile Robot Path Tracking | 122        |
| <b>Chapter 6. Real time Control of Ship &amp; Aircrafts – Historical perspective</b>              | <b>126</b> |
| 6.1. Ship Steering Problem                                                                        | 126        |
| 6.1.1. Artificial Neural Network                                                                  | 127        |
| 6.1.2. Fuzzy Controller                                                                           | 129        |
| 6.2. Aircrafts maneuvering & control                                                              | 132        |
| 6.2.1. Fuzzy Control                                                                              | 133        |
| 6.2.2. Genetic Algorithm based approach                                                           | 135        |
| 6.2.3. Adaptive Critic Network                                                                    | 136        |
| 6.3. Summary                                                                                      | 137        |
| <b>Chapter 7. Preliminary Analysis</b>                                                            | <b>138</b> |
| 7.1. Fuzzy Model Reference Learning Controller (FMRLC)                                            | 138        |
| 7.1.1. The Fuzzy Controller                                                                       | 140        |
| 7.1.2. The Reference Model                                                                        | 143        |
| 7.1.3. Learning Mechanism                                                                         | 144        |
| 7.2. Ship Dynamics                                                                                | 147        |
| 7.3. Aircraft Dynamics                                                                            | 150        |
| 7.4. Helicopter Dynamics                                                                          | 154        |
| <b>Chapter 8. Implementation</b>                                                                  | <b>157</b> |
| 8.1. Cargo Ship Steering Application                                                              | 157        |
| 8.2. Simulation                                                                                   | 160        |
| 8.3. Fault Tolerant Aircraft Application                                                          | 177        |
| 8.4. Simulation                                                                                   | 181        |
| 8.5. Helicopter Application                                                                       | 183        |
| <b>Chapter 9. Conclusion and Future Scope of work</b>                                             | <b>186</b> |
| <b>Chapter 10. Bibliography</b>                                                                   | <b>187</b> |
