

Table of Contents

Abstract.....	1
Chapter 1.....	4
Literature Review and Introduction.....	4
1.1 Biocontrol as a strategy against phytopathogens	5
1.2 An overview of Quorum Sensing	5
1.3 Quorum Sensing in Pathogens	7
1.4 Quorum sensing regulation of virulence factors in <i>Pectobacterium</i> species.....	9
1.5 Bacterial biosensors for studying Quorum sensing.....	18
1.6 Quorum quenching against phytopathogenic bacteria.....	19
1.6.1 Chemical interference-based quorum quenching	21
1.6.2 Enzymatic quorum quenching for virulence attenuation	23
1.6.3 Actinomycetota as biocontrol against phytopathogens	25
Rationale of the study	28
Objectives	29
Chapter 2.....	30
Isolation, Screening and Identification of AHL degrading Actinomycetota	30
2.1 Introduction	31
2.2 Methods and Materials	32
2.2.1 Isolation Strategies.....	32
2.2.2 Collection of samples for isolation of Actinomycetota.....	32
2.2.3 Media used	32
2.2.4 Isolation and enrichment protocol.....	33

2.2.5	Bacterial strains and culture conditions	36
2.2.6	CV026 biosensor based AHL degradation assay	36
2.2.7	Genomic DNA isolation	37
2.2.8	PCR amplification of 16S rRNA gene of isolates and identification	38
2.3	Results and Discussion	38
2.3.1	Isolation of Actinomycetota from soil and plant samples	38
2.3.2	Primary Screening for isolates- CV026 bioassay	40
2.3.3	16S rRNA gene sequencing and identification of isolates	40
2.3.4	Complete 16S rRNA sequencing of isolates AI5a and AI4	42
2.3.5	Confirmation of identity of partially sequenced CRD13.3C isolate using <i>Rhodococcus erythropolis</i> specific 16S rRNA gene primers	43
Chapter 3		46
Characterization of the selected AHL degrading Actinomycetotal isolates for attenuation of soft rot caused by <i>Pectobacterium carotovorum</i> subsp. <i>carotovorum</i> BR1		
3.1	Introduction	47
3.2	Methods and Materials	49
3.2.1	Bacterial strains and conditions	49
3.2.2	Media used	49
3.2.3	Biochemical tests	49
3.2.4	Growth curve of AHL degrading Actinomycetotal isolates	50
3.2.5	Growth inhibition assay	50
3.2.6	<i>In vitro</i> co-culture assay	50
3.2.7	Activity of PCWDEs (Plant Cell Wall Degrading Enzymes)	51
3.2.8	<i>In vitro</i> soft rot preventive and co-culture assay	52
3.2.9	Degradation of AHLs	52

3.2.10	Agar diffusion bioassay for quantification of AHL	53
3.2.11	Growth on AHL as sole source of carbon	54
3.2.12	AHL Restoration assay	54
3.2.13	AHL extraction after degradation and HPLC analysis.....	54
3.2.14	Biochemical characterization of Quorum Quenching enzyme	55
3.3.1	Biochemical characterization of the Actinomycetotal isolates.....	56
3.3.2	Growth curve of Actinomycetotal isolates	58
3.3.3	Growth inhibition assay	59
3.3.4	<i>In vitro</i> co-culture bioassay	60
3.3.5	Actinomycetotal isolates reduce Plant Cell Wall Degrading Enzymes produced by <i>PccBR1</i>	61
3.3.6	<i>In vitro</i> soft rot reduction on host vegetables by Actinomycetotal isolates.....	62
3.3.7	Degradation ability of biocontrol isolates on different AHLs.....	67
3.3.8	Quantification of C6-AHL using Agar Diffusion Method.....	68
3.3.9	Qualitative microtitre plate assay for biochemical characterization of AHL degradation by Actinomycetotal isolates	68
3.3.10	Quantitative bioassay for biochemical characterization of the quorum quenching enzyme of <i>G. nicotianae</i> AI5a	71
3.3.11	AHL utilization and restoration assay	75
3.3.12	AHL degradation and HPLC analysis	76
Chapter 4		80
<i>In planta</i> greenhouse and storage biocontrol studies with Quorum Quenching biocontrol isolate <i>Glutamicibacter nicotianae</i> AI5a against <i>Pectobacterium carotovorum</i> subsp. <i>carotovorum</i>		
4.1	Introduction	81
4.2	Materials and Methods	82
4.2.1	Bacterial strains and conditions	82

4.2.2	Media.....	83
4.2.3	Development of Cucumber plant infection model for blackleg caused by <i>PccBR1</i>	83
4.2.4	Biocontrol of <i>PccBR1</i> potato black leg by <i>Actinomyces</i> in greenhouse assay	84
4.2.5	Biparental mating for GFP tagging of <i>PccBR1</i>	87
4.2.6	Co-culture assay	88
4.2.7	PCR with specific 16S rRNA primers of <i>PccBR1</i>	88
4.2.8	Plasmid vectors used for cloning	89
4.2.9	Genomic DNA isolation of bacterial isolates <i>PccBR1</i> and <i>GnAI5a</i>	90
4.2.10	Amplification of specific 16S rRNA genes of <i>GnAI5a</i> and <i>PccBR1</i>	91
4.2.11	Ligation	92
4.2.12	<i>E. coli</i> DH5a competent cell preparation and transformation	93
4.2.13	Plasmid preparation and clone confirmation.....	94
4.2.14	Standardization of quantitative Real Time PCR using recombinant <i>E. coli</i> DH5a strains	96
4.2.15	Storage studies.....	96
4.2.16	<i>In planta</i> assay for effect of biocontrol isolate <i>G. nicotianae</i> AI5a on the colonization of <i>PccBR1</i> pH60 GFP in mung bean	98
4.3	Results and Discussion	100
4.3.1	Effect of quorum quenching isolates on <i>in planta</i> cucumber infection model.....	100
4.3.2	Biocontrol of <i>PccBR1</i> by quorum quenching <i>G. nicotianae</i> AI5a on potato <i>in planta</i> model	101
4.3.3	Construction of GFP marked <i>PccBR1</i> strain by Biparental mating.....	110
4.3.4	Genomic DNA isolation of bacterial cultures, <i>PccBR1</i> pH60 GFP and <i>GnAI5a</i>	113
4.3.5	Amplification of specific 16S rRNA gene by PCR	113

4.3.7 Plasmid preparation from recombinant <i>E. coli</i> DH5 α (pTZ57R/TGn) and recombinant <i>E. coli</i> DH5 α (pJETPcc) for clone confirmation	116
4.3.9 Standardization of quantitative Real Time PCR using recombinant <i>E. coli</i> DH5 α strains	120
4.3.11 Effect of <i>G. nicotianae</i> AI5a on the colonization of <i>PccBR1</i> pHc60 in mung bean	126
Chapter 5.....	133
Virulence attenuation of <i>PccBR1</i> by quorum quenching phytochemical compounds	133
5.1 Introduction	134
5.2.1 Bacterial strains	135
5.2.2 Determination of sub-lethal concentration of phyto-chemical compounds	135
5.2.3 Qualitative assay for the detection and degradation of AHL by phytochemicals	136
5.2.4 <i>In vitro</i> soft rot assay	137
5.2.5 Effect of Phytochemical compounds on the motility of <i>PccBR1</i>	138
5.3.6 Effect of Phytochemical compounds on the PCWDEs of <i>PccBR1</i> .	138
5.3.7 Effect of Phytochemical compounds on the biofilm formation of <i>PccBR1</i>	139
5.3.8 Biocontrol of <i>PccBR1</i> pHc60 soft rot on potato tubers by phytochemical compounds in storage conditions.....	139
5.3.9 <i>In planta</i> assay for effect of phytochemical compounds on the colonization of <i>PccBR1</i> pHc60 in mung bean	140
5.3 Results and Discussion	142
5.3.1 Determination of sub-lethal concentration of phytochemical compounds on <i>PccBR1</i>	142

6.3.2	Effect of phytophenolic compounds on the production of quorum sensing molecule in <i>PccBR1</i>	143
5.3.3	<i>In vitro</i> biocontrol assay for soft rot caused by <i>PccBR1</i> in Potato and Cucumber	145
5.3.5	Effect of phytophenolic compounds on PCWDEs production by <i>PccBR1</i>	148
5.3.6	Effect of phytochemicals on biofilm formation ability of <i>PccBR1</i>	149
5.3.7	Biocontrol ability of phytochemicals against soft rot causing phytopathogen <i>PccBR1</i> in storage conditions	152
5.3.8	Effect of phytochemicals on the colonization of <i>PccBR1</i> pH60 in mung bean.....	155
	Summary	158
	Conclusion	166
	References.....	173
	Presentations and Publications	194
