

List of Tables

Table 2. 1: Summary of the prepared samples of both series	23
Table 3.1: Crystallographic data of pure and doped CuFeO ₂ samples	60
Table 3. 2: Crystallite size and average strain using various methods.	61
Table 3.3: Elemental analysis report of CFO and CFMnV	65
Table 3.4: Crystallographic data of the samples with single dopings.....	69
Table 3. 5: Crystallographic data of the samples with double doping.....	69
Table 3.6: Selected interatomic distances and bond angles of the samples with single doping	70
Table 3.7: Selected interatomic distances and bond angles of the samples with double doping.....	71
Table 3. 8: Estimated crystallite size and average strain of the studied samples with various methods.....	74
Table 3. 9: Elemental analysis report of CCO and CCMnV.....	78
Table 4.1: Mossbauer parameters of the studied samples	87
Table 4.2: Obseved band gaps in the studied samples	89
Table 4.3: Observed bandgaps in the studied samples.....	94
Table 5. 1: Resistivity and activation energy of the studied samples.....	103
Table 5.2: Resistivity values measured at room temperature.....	108
Table 5.3: Activation energy for CuCrO ₂ , CuCr _{0.96} M _{0.03} V _{0.01} O ₂ (M = Ti, Nb, Ga, and Mn), and CuCr _{0.96} V _{0.04} O ₂ samples	110
Table 5. 4: Calculated activation energies for the pure and doped CuCrO ₂ samples	114
Table 6. 1: Magentic properties of CFO and CFTiV samples.	124
Table 6. 2: Coercivity and Remanencemagnetization for CuCrO ₂ , CuCr _{0.96} M _{0.03} V _{0.01} O ₂ (M = Ti, Nb, Ga, and Mn), and CuCr _{0.96} V _{0.04} O ₂ samples at (a) 25 K and (b) 40 K.	132
Table 7.1: Crystallographic data for CuCr _{0.96} Mn _{0.03} V _{0.01} O ₂ thin film	143
