

LIST OF TABLES

<u>Table</u>		<u>Page</u>
3.1	Rock stratigraphy of Kutch	25
✓4.1	Stratigraphic classification of Wagad Group of rocks	37
✓4.2	Dabunda dome section	46
✓4.3	Bharodia and Sonalwa dome sections	51
✓4.4	Kamthkot dome and Kakarwa anticline sections	65
✓4.5	Washtawa dome section	73
✓4.6	Washtawa dome (S Flank) and Adhoi dome (N Flank) sections	78
4.7	Adhoi anticline section	84
6.1	Number of paleocurrent observations taken (structurewise)	133
6.2	Number of paleocurrent directions (sets of readings) obtained from sedimentary structures in various formations of Wagad hills	134
6.3	Cross bedding distribution pattern (number of readings) within 30° class interval for various formations	139
✓11.1	Mesozoic rock stratigraphy of the Wagad hills	300
✓11.2	Wagad sedimentary model	301

LIST OF PLATES

<u>Plate</u>		<u>Page</u>
1	Shale and flaggy siltstone alternations, Kharol Member. Locality: Nara dome	61
2	Nara shales. Locality: Nara dome	61
3	Conglomeratic mudstone band, marking top of the Washtawa Formation. Locality: Nara dome, southern flank.	63
4	Panoramic view of southern flank of the Nara dome. Extreme left hill is the core. Nara village is in the foreground.	64
5	Patasar shales capped by Fort sandstones. Locality: Patasar tank, representing type section of the Patasar Shale Member.	67
6	Shale and siltstone alternations of Patasar Shale Member capped by bedded Fort Sandstone. Locality: about 1/2 mile west of Narada dome.	67
7	Southern slope of the Fort hill representing type section of the Fort Sandstone Member.	68
8	Khirai hill - Patasar shales capped by Fort Sandstones.	79
9	Panoramic view of the northern flank of Mewasa dome.	81
10	View of the northern flank of Adhoi anticline representing the entire Adhoi Member. Ridge on right is Lower Astarte band while extreme left hill belongs to the Gandau Formation.	85
11	Highly fossiliferous nature of the Upper Astarte band. Locality: Manfara dome.	87

- x -

12	Massive sandstones belonging to upper part of the Gamdau Formation. Locality: 1 mile N of Wamka dome.	87
13	Tabular cross bedding in sandstones of the Washtawa Formation. Locality: Southern flank of Dedarwa anticline	136
14	Cross bedding both small and medium scale in Lower Kanthket Sandstones. Locality: about 1/2 mile N of Kidianagar	136
15	Trough cross bedding in Fort Sandstone Member. Locality: Bhuj-Rapar road, about 1.5 miles N of Khirai	137
16	Sporadic development of tabular cross bedding in Fort sandstone. Locality: Fort hill	140
17	Small and medium scale tabular cross bedding in sandstone of Adhoi Member. Locality: Adhoi anticline	140
18	Asymmetrical ripple marks in Fort sandstone. Locality: southern flank of the Washtawa dome	142
19	Asymmetrical ripple marks in Fort sandstone. Locality: Fort hill	142
20	Large size asymmetrical ripple marks in Fort sandstone. Locality: northern flank of Dedarwa anticline	143
21	Large size symmetrical ripple marks in Fort sandstone. Locality: northern flank of Dabunda dome	143
22	Cuspate ripple marks in sandstone of the Gamdau Formation. Locality: about 1 mile N of Wamka dome	144

23	Slightly asymmetrical ripple marks in sandstone of the Gandau Formation. Locality: about 1/2 mile N of Wamka dome	146
24	Giant size ferruginous nodules of with sporadic development of cross bedding in massive sandstone of Adhei Member. Locality: about 1/2 mile S of Bharodia	146
25	Scour and fill structure in Fort sandstone. Locality: Rapar-Kidianagar road, about 2 miles S of Pragpur, Eastern Wagad	148
26	Kakarwa anticline showing steep southerly dips (of ridge towards right) along the Kanthkot fault and gentle northerly dips of extreme left background hill	230
27	Steeply dipping Fort sandstone near South Wagad fault. Locality: sothern flank of Chitrod dome	230
28	South Wagad fault. Vertical Mesozoic beds in contact with horizontal Tertiaries forming large plains. Locality: S of Mewasa dome	234
29	South Wagad fault. Ridge comprising sandstones of Lower Kanthkot Formation in contact with low lying Tertiary clays of foreground. Locality: southern flank of Chitrod dome	236
30	Dabunda fault. Locality: W of Dabunda	239
31	A minor fault in Lower Kanthkot Formation. Locality: S of Bhutakia	239
32	High angled Dedarwa fault. Fort sandstones (right) in contact with shales of Kharol Member. Locality: about 1/2 mile S of Chitrod railway station	240
