

# LIST OF PLATES

PLATE		PAGE NO.
I 1	View of the basaltic hills with inter-montane valley (Locality : Villages Jitgadh and Zampa)	6
III 1	The alluvial plains (N. of Narmada) with low cretaceous (Sandstone) hills in the background (Locality : Naswadi)	40
III 2	Low altitude sandstone hills of Naswadi with alluvial plains in the foreland (Locality : Near Naswadi)	41
III 3	A general view of the trappean hilly terrain with Terav khadi in the foreland (Locality : Near Village Juna Mosda)	43
III 4	Typical subdued undulating topography of the uplands (Locality : Near Netrang, way to Rajpardi)	60
III 5	Low altitude trappean ridge in the upland (showing terrace farming; Locality : Near village Moti Daberi)	66
III 6	The river Amaravati in the coastal plain, its course showing alluvial cliffy banks.	71
III 7	Eustarine mouth and muddy banks of river Narmada	73
IV 1	A panoramic view of a Narmada meander curve with alluvial terrace (Locality : Tilakwada)	79
IV 2	River Men : A relatively smaller river but with wide channel and alluvial cliffy banks.	81
IV 3	The river Heran : Rocky bed and alluvial cliffy banks.	81
IV 4	River Karjan, flowing within the trappean hilly terrain : The rocky channel shows sharp bends or "meander" controlled by intersecting joints (Locality : Juna Raj)	84

PLATE		PAGE NO.
IV 5	A typical waterfall in Dhamankhadi a tributary of Terav, showing a drop of 5-7 m (Locality : Near village Ghantoli)	92
IV 6	A stream showing joint controlled zig-zag course and a waterfall/rapid (Locality : Som khadi - near village Kokam).	106
IV 7	A small stream showing entrenched meanders, on the uplands (Locality : Near Rajpardi)	106
IV 8	Dissected alluvial terrain, characterising a bad land topography.	107
VI 1	Round top low altitude ridge, showing effect of weathering and erosion (Locality : Right bank of River Terav, near village Zampa).	138
VI 2	Round top basaltic hill showing disintegration along joints and accumulation of scree material (Locality : the left bank of river Terav near village Sada and Bej)	138
VI 3	Weathering and erosion of basalt along sub-horizontal joints (Locality : Cliffy bank of Mohan khadi near village Thava)	138
VI 4	Rocky and cliffy bank of the river Terav (Locality : Near Village Zampa)	145
VI 5	River Terav : Depositional feature, the river course is divided by bars - An accumulation of cobbles and pebbles of basalt, characterising a depositional phenomenon in river Terav (Locality : Near Village Juna Mosda).	145
VI 6	Karjan river course with gravelly bar/ island (Locality : River Karjan near village Ajauvai)	145
VI 7	Cliff on a high altitude basaltic hill overlooking Sankali khadi (Locality : Near village Fulsar)	Table VI 2 (i)

Plate		Page No.
VI 8	River Karjan marked by a straight course, a waterfall ( 2 - 3 m) and rocky cliffy bank. (Locality : Near village Gopalía)	Table VI 2(i) 5
VI 9	Conference view of the rivers Terav and Karjan rocky bed, with alluvial terraced bank (Locality : Near Village Sada and Bej).	Table VI 2(i) 12
VI 10	Terraced alluvial bank with a local flood plain of river Men	Table VI 2(i) 13
VI 11	Alluvial cliffy bank on river Aswan, wide river course shows a meander curve, a gravelly island and flood deposits.	Table VI 2(ii) 27
VI 12	A river Narmada near Garudeshwar : The banks show rocky terraces	Table VI 2 (i) 30
VI 13	Muddy river mouth of Narmada showing mudflats and bars.	Table VI 2(ii) 32
VI 14	Alluvial cliffy bank of Narmada river mouth	Table VI 2(ii) 32
VII 1	A dissected alluvial terraced (Flood Plain) of the river Men	155
VII 2	Paddy field within the Karjan river bed (Locality : Dediapada upland, near village Gopalía)	161
VII 3	A cultivable patch in the hilly area : In the background the Eastern trappean hilly terrain (Locality : The confluence of rivers of rivers Terav and Karjan near village Bej).	164
VII 4	Thick forest showing bamboo cultivation (Locality : Near village Juna Mosda)	164
VIII 1	Road across the low altitude trappean ridge in the upland (road linking the villages Dediapada and Sagbara).	181
