

LIST of FIGURES

Figure No	Title	Page No
1.1	Nutrition Programs: A Health Systems Approach	8
2.1	At Current Rates of Progress on the MDGs, Millions of children who could have been reached will miss out	11
2.2	Number of Underweight Children in the Developing Countries	13
2.3	Prevalence of Undernutrition (<-2SD) in Children Under Three years (India)	14
2.4	Comparison of Prevalence of Undernutrition in Children Under Three Years within Different States of India (NFHS-3 2005-06)	14
2.5	The Inadequate Dietary Intake – Disease Cycle	16
2.6	Undernutrition Throughout the Life Cycle	18
2.7	Components of ICDS-IV Project	39
3.1	An Overview of the Study Using the HSR Methodology	60
3.2	Study Design of Phase I Part A: Functionaries	63
3.3	Study Design of Phase I Part B: Beneficiaries	64
3.4	Section 1: Capacity Building Training for Strengthening Quality of Implementation of selected ICDS services with a focus on counseling and communication skills	70
3.5	Section 2: Continued Reinforcement of Capacity Building through Guided practice in the field	71
3.6	Section 3: Pre-Post Intervened vs. Control Intervention – An Indepth Study	72
3.7	Components of Nutrition Health Education Communication	73
4.1.1	Feeding Practices of Children According to Age	122
4.1.2	Frequency of Vegetable Intake among Children (N=60)	143
4.1.3	Frequency Fruit Intake among Children (N=60)	143
4.1.4	Mean Intake of Various Foods (% RDA) between Boys and Girls	145
4.1.5	Mean Nutrient Intake (% RDA) of Boys and Girls	146
4.1.6	Percent Children Who Met Various Level of % RDA (N=60)	147
4.1.7	Comparison of Mean Weight of the Children Sex wise with the WHO Growth Standards	149
4.1.8	Comparison of Mean Height of the Children Sex wise with the WHO Growth Standards	149
4.1.9	Mean WAZ ¹ , HAZ ² and WHZ ³ Z Scores of Children with Different Levels of Calorie Intake (N=60)	151
4.1.10	Association of Mother's Caregiving Behaviours with Child's Weight for Age Z Score	153
4.1.11	Nutrient Intake (mean % RDA) of Children Regular at AWCs Vs. Irregular at AWCs	162
4.1.12	Prevalence of Underweight (Weight for Age) among Children REG-AWC vs. IREG-AWC	163
4.1.13	Prevalence of Underweight Stunting (Height for Age) among Children REG-AWC vs. IREG-AWC	163
4.1.14	Comparison of WHO vs. NCHS standards for WAZ, HAZ and WHZ of children	168
4.2.1	Strengthening capacity of ICDS staff in Effective Communication for	175

Figure No	Title	Page No
	Behaviour Change	
4.2.2	Quality of Implementation of NHEC Meetings	184
4.2.3	Recommended Frequency and Quantity of CF fed to Children of Different Age Groups	227
4.2.4 a	Gender wise Comparison of the Mean % RDAs of Cereals and Pulses met by IG and CG Children Before and After the Intervention	229
4.2.4 b	Gender wise Comparison of the Mean % RDAs of Oil and Sugar met by IG and CG Children Before and After the Intervention	229
4.2.4 c	Gender wise Comparison of the Mean % RDAs of Fruits and Vegetables met by IG and CG Children Before and After the Intervention Energy Giving Foods	229
4.2.4 d	Gender wise Comparison of the Mean % RDAs of Milk met by IG and CG Children Before and After the Intervention	230
4.2.5 a	Agewise Comparison of the Mean % RDAs of Cereals and Pulses met by IG and CG Children Before and After the Intervention	231
4.2.5 b	Agewise Comparison of the Mean % RDAs of Sugar and Oil met by IG and CG Children Before and After the Intervention	231
4.2.5 c	Agewise Comparison of the Mean % RDAs of Fruits and Vegetables met by IG and CG Children Before and After the Intervention	231
4.2.5 d	Agewise Comparison of the Mean % RDAs of Milk met by IG and CG Children Before and After the Intervention	232
4.2.6 a	Age wise comparison of Energy and Protein RDAs in IG and CG before and after the NHEC intervention	234
4.2.6 b	Age wise comparison of Calcium and Iron RDAs in IG and CG before and after the NHEC intervention	234
4.2.6 c	Age wise comparison of Vitamin A and Vitamin C RDAs in IG and CG before and after the NHEC intervention	234
4.2.7	Mean Height of Children after NHEC Intervention	236
4.2.8	Mean Weight of Children after NHEC Intervention	237
4.2.9	Prevalence of Underweight (W-A z score) in Boys & Girls: Impact of NHEC Intervention on IG	238
4.2.10	Prevalence of Stunting (H-A z score) in Boys & Girls: Impact of NHEC Intervention on IG	239
4.2.11	Prevalence of Underweight (W-A z score) in Boys & Girls: Impact of NHEC Intervention on CG	239
4.2.12	Prevalence of Stunting (H-A z score) in Boys & Girls: Impact of NHEC Intervention on CG	240
5.1	Study Design of Phase I	262
5.2	Mean Food Intake (% RDA) and Mean Nutrient Intake (% RDA) of all Children	273
5.3	Prevalence of Underweight, Stunting and Wasting among Boys and Girls	274
5.4	Changes in Perceptions of Mothers (AT-NHEC vs. NAT-NHEC) Regarding IYCF and child care practices	282
5.5	Mean Increment (per month) in Weight and Height in IG vs. CG Children	284
5.6	Change in Nutritional Status of Boys and Girls in IG vs. CG	285
