Synopsis	iv
Acknowledgements	xiv
1 Introduction	1
1.1 General	1
1.2 State-of-the-Art	3
1.2.1 Optimisation Approach for the Placement of DG	3
1.2.2 Model of Renewable DG	14
1.3 Motivation	18
1.4 Thesis Organization	20
2 Wind Power Generation Unit Model	22
2.1 Introduction	22
2.2 Wind System	24
2.2.1 Average Power in Wind	24
2.2.2 Wind Speed Distribution Function	25
2.2.3 Wind Generation Unit	26
2.3 Weibull Probability Distribution Function	28
2.3.1 Estimation of value of k and c	29
2.4 Wind Power Analysis	31
2.4.1 Data Source	31
2.4.2 Wind Speed Statistics and Power Generation Model	31
2.5 Result and Discussion	33
2.5.1 Wind Power Generation Model using Wind States	37
2.6 Conclusion	38

3	Solar Power Generation Unit Model	40
3.1	Introduction	40
3.2	Solar Photovoltaic System	41
3.2.1	Photovoltaic Generation Modelling	42
3.3	Beta probability distribution	44
3.4	Solar Irradiation Modelling and Analysis	45
3.4.1	Data sources	45
3.4.2	Solar Power Probability by Beta pdf	46
3.5	Result Analysis	47
3.6	Conclusion	53
4	Optimal Summation of Natural Power Resources in Microgrid	56
4.1	Introduction	56
4.2	Microgrid Technology	58
4.2.1	Microturbines	59
4.2.2	Natural Power sources	60
4.2.3	Fuel cells	60
4.2.4	Storage Devices	60
4.2.5	Microgrid Benefits and Challenges	61
4.3	Microgrid Model	62
4.4	Backward Forward Sweep Power Flow	64
4.4.1	Backward Sweep Process	64
4.4.2	Forward Sweep Process	64
4.4.3	Nodal Analysis using Convergence Criteria	65
4.5	Application of Backward Forward Load Flow to Radial Distribution System	65
4.5.1	NPDG data	65
4.5.2	Network and Load Data	66
4.6	Application of Backward Forward Load Flow on IEEE 13 node Distribution System for placement of NPDG	67
4.6.1	Load Flow Result and Discussion	68
4.7	Problem Formation Strategy and Solution	70
4.7.1	Objective Function	70
4.7.2	Optimisation Problem Solution and Discussion	72

4.8	Conclusion	74
5	Optimum Integration of Wind and Solar Units using Levy Flight PSO.	82
5.1	Introduction	82
5.2	An Enhanced Particle Swarm Optimizer Algorithm with Levy Flight . . .	86
5.2.1	Levy Flight Distribution	87
5.3	IEEE-13 node Distribution System as Microgrid	88
5.4	Problem Formation	89
5.4.1	Nomenclature	89
5.4.2	Objective Function	90
5.4.3	System constraints	92
5.5	Steps to Solve Optimization Problem using LFPSO for 12-node Grid connected Microgrid	94
5.6	Simulation Result and Discussion	96
5.7	Conclusion	103
6	Conclusions	104
6.1	General	104
6.2	Summary of Important Findings	106
6.3	Scope for Further Research	108
A	Data for IEEE 13 node Radial Distribution System	123
