

Table of Contents

Abstract.....	2
Chapter 1	5
Introduction and Literature Review	5
1.1 Nitrate contamination sources	6
1.2 Health risks of nitrate contaminated water.....	6
1.3 Chemical, Physical and Biological methods for nitrate removal	7
1.4 Biological denitrification.....	8
1.5 Bioaugmentation	9
1.6 Biological wastewater treatment	11
1.7 Moving Bed Biofilm Reactor	12
1.8 Operational parameters influencing the performance of MBBR	16
1.8.1 Carrier selection.....	17
1.8.2 Filling ratio	17
1.8.3 Modified carriers for MBBR	18
1.8.4 Hydrodynamics/ Shear stress in MBBR.....	18
1.8.5 Hydraulic retention time (HRT)	18
1.9 Environmental and nutritional factors important for the efficient denitrification process in MBBR.....	19
1.9.1 Effect of carbon source.....	19
1.9.2 Effect of C/N	19
1.9.3 Effect of nitrate loading.....	19
1.9.4 Effect of metal ions.....	20
1.9.5 Effect of Dissolved Oxygen (DO), temperature and pH	20
1.10 Biofilms as a potential strategy to improve bioaugmentation in wastewater treatment system.....	21

1.11 Development of biofilm	22
1.11.1 Stage 1- Initial attachment.....	22
1.11.2 Stage 2 and 3: Microcolony formation and Biofilm maturation	22
1.11.3 Stage 4: Biofilm dispersion	23
1.12 Metagenomics in wastewater treatment	23
1.13 <i>Thauera</i> as a potential denitrifying organism for the treatment of wastewater	27
Rationale	29
Objectives.....	30
Chapter 2	31
Selection of special biofilm forming denitrifying bacteria from activated sludge	31
2.1 Introduction.....	32
2.2 Materials and Methods.....	33
2.2.1 Enrichment and isolation of denitrifying bacteria	33
2.2.2 Screening of biofilm forming denitrifying bacteria.....	34
2.2.3 Identification of selected isolates	35
2.2.4 16S rRNA gene amplification and analysis.....	36
2.2.5 Confirmation of amyloid production by Thioflavin T staining.....	37
2.2.6 Co-culture growth inhibition	37
2.2.7 Antibiotic Sensitivity Test	37
2.2.8 Growth profile of selected isolates	37
2.2.9 Flask level denitrification studies	38
2.2.10 Gas chromatography	38
2.2.11 Resting cells kinetics	38
2.2.12 Effect of various parameters on denitrification and biofilm of consortium DC5 in microtiter plate assay	39

2.2.13 Analytical Methods.....	40
2.2.14 Data analysis.....	42
2.3 Results and Discussion.....	42
2.3.1 Enrichment of denitrifying bacteria from activated sludge	43
2.3.2 Screening of amyloid producing isolates for denitrification ability	46
2.3.3 Development of denitrifying consortium.....	49
2.3.4 Effect of different factors on biofilm formation and denitrification efficiency of consortium DC5 in microtiter plate assay	65
Chapter 3	73
Performance of bench scale moving bed biofilm reactor (MBBR) with the consortium of the selected biofilm forming denitrifying bacteria and its evaluation	73
3.1 Introduction	74
3.2 Materials and Methods	75
3.2.1 Preparation of consortium DC5	75
3.2.2 Bench-scale dMBBR developed with consortium DC5	75
3.2.3 Continuous dMBBR studies with consortium DC5	76
3.2.4 Treatability of industrial effluents by consortium DC5.....	80
3.2.5 Statistical Analysis	80
3.3 Results and Discussion.....	80
3.3.1 Denitrification studies in continuous dMBBR developed with consortium DC5	80
3.3.2 Studies on kinetics of denitrification in dMBBR	88
3.3.3 Comparative study between suspended growth reactor and dMBBR developed with consortium DC5.....	90
3.3.4 Comparative studies between activated sludge and dMBBR inoculated with consortium DC5.....	92

3.3.5 Comparative studies between control reactor (without inoculum) and dMBBR developed with consortium DC5	92
3.3.6 Potential of denitrifying MBBR developed with consortium DC5 in treatment of nitrate containing effluents from different industries.....	95
Chapter 4	101
Characterization of the biofilm produced by the selected bacterial isolates	101
4.1 Introduction	102
4.2 Materials and Methods	103
4.2.1 Microbial community analysis of biofilm developed in optimized denitrifying MBBR.....	103
4.3 Results and Discussion.....	105
4.3.1 Abundance of phyla, genus and species in carrier associated denitrifying biofilm	105
4.3.2 Functional potential evaluation KEGG database.....	110
4.3.3 Functional profiles for heavy metal resistance, antibiotic resistance and toxic compounds at subsystem level using MG-RAST	112
4.3.4 Relative abundance of genes involved in nitrogen metabolism inside dMBBR biofilm	114
4.3.5 Relative abundance of genes involved in sulfur metabolism in dMBBR biofilm	118
4.3.6 Relative abundance of genes involved in methane metabolism in dMBBR biofilm	121
4.3.7 Xenobiotic biodegradation and metabolism genes in dMBBR biofilm	124
Chapter 5	127
Studies on most persistent and dominant denitrifying bacterium in continuously operated MBBR	127
5.1 Introduction	128

5.2 Materials and methods	128
5.2.1 Microorganism, media and growth condition.....	128
5.2.2 Auto-aggregation ability of <i>Thauera</i> sp.V14	129
5.2.3 Hydrophobicity of <i>Thauera</i> sp.V14.....	129
5.2.4 Flask level denitrification efficiency of <i>Thauera</i> sp.V14.....	129
5.2.5 Effect of temperature on morphology and motility of <i>Thauera</i> sp.V14.....	130
5.2.6 Optimization of factors affecting <i>Thauera</i> sp. V14 biofilm and denitrification efficiency (One factor at a time (OFAT)).....	130
5.2.7 Validation of RSM results	134
5.2.8 Nitrate removal studies in continuous MBBR inoculated with <i>Thauera</i> sp.V14	135
5.2.9 Quantification of abundance of <i>Thauera</i> sp.V14 on carriers	135
5.2.10 SEM analysis	135
5.2.11 FTIR analysis.....	136
5.2.12 Data Analysis.....	136
5.3 Results and Discussion.....	136
5.3.1 Characterization of <i>Thauera</i> sp.V14	136
5.3.2 Effect of temperature on morphology and motility of <i>Thauera</i> sp.V14.....	137
5.3.3 Flask level denitrification studies with <i>Thauera</i> sp.V14.....	138
5.3.4 Effect of different parameters affecting denitrification and biofilm formation of <i>Thauera</i> sp.V14 (One factor at a time (OFAT)).....	139
5.3.5 Medium optimization using Plackett-Burman Design	145
5.3.6 Optimization of biofilm formation and denitrification efficiency of <i>Thauera</i> sp.V14 by Response surface methodology (RSM).....	146
5.3.7 Validation of optimized results of RSM.....	155
5.3.8 Nitrate removal studies in continuous dMBBR with <i>Thauera</i> sp .V14	155

5.3.9 Characterization of carrier associated <i>Thauera</i> biofilm developed in dMBBR	156
Summary.....	159
Conclusion	167
Future Perspectives.....	174
References.....	176
Presentations and Publications.....	225
