

SR. NO.	TABLE NO.	TABLE DESCRIPTION	PAGE
1	2.1	Nano materials and techniques to enhance mechanical properties of textiles	51
2	3.1	Specifications Polyamide chips	57
3	3.2	SiO ₂ Specifications	58
4	3.3	Fabric specifications	59
5	3.4	Melt spinning pilot plant specifications	60
6	3.5	Compositions of nanocomposites preparation by formic acid mixing	64
7	3.6	Spinning Parameters	67
8	3.7	Compositions of polypropylene SiO ₂ nanocomposite filament	68
9	3.8	Compositions of polyester SiO ₂ nanocomposite fabric	69
10	4.1	Compositions of nanocomposite preparation by formic acid mixing	78
11	4.2	FTIR characterization peaks of pure polyamide and polyamide / Silica nanocomposite films	85
12	4.3	Enthalpy (ΔH) of pure polyamide and polyamide/silica nanocomposite film	88
13	4.4	Effect of SiO ₂ nano silica on tensile property of nanocomposite films	96
14	4.5	Effect of nano silica on young's modulus, stiffness and work of rupture	97
15	4.6	Compositions of polypropylene SiO ₂ nanocomposite filament	101
16	4.7	Elemental analysis data of pure polypropylene filament	107
17	4.8	Elemental analysis data of polypropylene silica nanocomposite filament	108
18	4.9	FTIR characterization peaks of pure polypropylene and polypropylene / Silica nanocomposite filaments.	113

19	4.10	Effect of SiO ₂ concentration on melting point of PP and enthalpy of melting (ΔH)	116
20	4.11	Effect of SiO ₂ nano particles on tensile property of polypropylene filaments	121
21	4.12	Effect of nano silica on young's modulus and work of rupture	128
22	4.13	Compositions of polypropylene SiO ₂ nanocomposite filament	131
23	4.14	FTIR characterization peaks of pure polyester and polyester/Silica nanocomposite fabric	134
24	4.15	Enthalpy (ΔH) of treated and untreated polyester fabric	138
25	4.16	Tensile strength of polyester fabric	140
26	4.17	Effect of nano silica on young's modulus and work of rupture of polyester fabric.	143
27	4.18	Tearing Strength of polyester fabric	144
28	4.19	Crease Recovery Angle of Polyester fabric	145
