

List of Tables

Table	Page no
1. Concentration and absorbance data for gallic acid and extracts	38
2. Concentration and absorbance data for quercetin and extracts	40
3. Concentration and absorbance data for naringenin and extracts	41
4. The protocol for CCl ₄ -induced hepatotoxicity on preliminary basis	49
5. The protocol for CCl ₄ -induced hepatotoxicity	49
6. The protocol for paracetamol-induced hepatotoxicity	50
7. The protocol for thioacetamide-induced hepatotoxicity	51
8. Protocol for the in vitro assessment of hepatic cytotoxicity of sub-fractions and isolated compounds	58
9. Protocol for the in vitro hepatoprotective activity of sub-fractions and isolated compounds	59
10. Concentration and peak area data for PD1 and EE	66
11. Concentration and peak area data for quercetin-3-glucoside and EE	67
12. Concentration and peak area data for BM1 and ME	69
13. Proximate analysis of the aerial parts of <i>P. daemia</i> and roots of <i>B. montanum</i>	84
14. Successive solvent extraction of aerial parts of <i>P. daemia</i> and roots of <i>B. montanum</i>	86
15. Qualitative evaluation of successive extracts	87
16. TLC studies on successive extracts of aerial parts of <i>P. daemia</i>	88
17. TLC studies on successive extracts of roots of <i>B. montanum</i>	89
18. TLC studies on the extracts and their fractions of <i>P. daemia</i>	91
19. TLC studies on the extracts and their fractions of <i>B. montanum</i>	92
20. Effect of EE and AE of <i>P. daemia</i> against CCl ₄ -induced hepatotoxicity in rats	95

21. Percentage restoration of various biochemical parameters by EE and AE against CCl ₄ -induced hepatotoxicity	95
22. Effect of ME and AE from <i>B. montanum</i> against CCl ₄ -induced hepatotoxicity in rats	99
23. Percentage restoration of various parameters by ME and AE against CCl ₄ -induced hepatotoxicity	99
24. Effect of EE and EFEE of <i>Pergularia daemia</i> on CCl ₄ -induced hepatotoxicity in rats	102
25. Percentage restoration of various parameters showed by EE and EFEE against CCl ₄ -induced hepatotoxicity	104
26. Effect of ME and MFME of <i>B. montanum</i> on CCl ₄ -induced hepatotoxicity in rats	106
27. Percentage restoration of various parameters showed by ME and MFME against CCl ₄ -induced hepatotoxicity	108
28. Effect of EE and EFEE of <i>Pergularia daemia</i> on paracetamol-induced hepatotoxicity in rats	110
29. Percentage restoration of various parameters showed by EE and EFEE against paracetamol-induced hepatotoxicity	112
30. Effect of ME and MFME of <i>B. montanum</i> on paracetamol-induced toxicity in rats	114
31. Percentage restoration of various parameters showed by ME and MFME against paracetamol-induced hepatotoxicity	116
32. Effect of EE and EFEE of <i>P. daemia</i> on thioacetamide-induced hepatotoxicity in rats	118
33. Percentage restoration of various parameters showed by EE and EFEE against thioacetamide-induced hepatotoxicity	120
34. Effect of ME and MFME of <i>B. montanum</i> on thioacetamide-induced hepatotoxicity in rats	122
35. Percentage restoration of various parameters showed by ME and MFME against thioacetamide-induced hepatotoxicity	124

36. Effect of AFEFEE and EFEFEE of <i>P. daemia</i> on CCl ₄ -induced hepatotoxicity in rats	127
37. Percentage restoration of various parameters showed by AFEFEE and EFEFEE against CCl ₄ -induced hepatotoxicity	128
38. Effect of EMKMFME and MFMFME of <i>B. montanum</i> on CCl ₄ -induced hepatotoxicity in rats	131
39. Percentage restoration of various parameters showed by EMKMFME and MFMFME against CCl ₄ -induced hepatotoxicity	132
40. Effect of AFEFEE and EFEFEE of <i>P. daemia</i> on paracetamol-induced hepatotoxicity in rats	135
41. Percentage restoration of various parameters showed by AFEFEE and EFEFEE against paracetamol-induced hepatotoxicity	136
42. Effect of EMKMFME and MFMFME of <i>B. montanum</i> on paracetamol-induced hepatotoxicity in rats	139
43. Percentage restoration of various parameters showed by EMKMFME and MFMFME against paracetamol-induced hepatotoxicity	140
44. Effect of AFEFEE and EFEFEE of <i>Pergularia daemia</i> on thioacetamide-induced hepatotoxicity in rats	143
45. Percentage restorations of various parameters showed by AFEFEE and EFEFEE against thioacetamide-induced hepatotoxicity	144
46. Effect of EMKMFME and MFMFME of <i>B. montanum</i> on thioacetamide-induced toxicity in rats	147
47. Percentage restoration of various parameters showed by EMKMFME and MFMFME against thioacetamide-induced Hepatotoxicity	148
48. Effect of AFEFEE and EFEFEE on primary cultured rat hepatocytes	151

49. Effect of EMKMFME and MFMFME on primary cultured rat hepatocytes	152
50. Effect of <i>P. daemia</i> against CCl ₄ -induced toxicity on rat hepatocytes	153
51. Effect of <i>B. montanum</i> against CCl ₄ -induced toxicity on rat hepatocytes	155
52. Effect of <i>P. daemia</i> against paracetamol-induced toxicity on rat hepatocytes	156
53. Effect of <i>B. montanum</i> against paracetamol-induced toxicity on rat hepatocytes	158
54. Effect of <i>P. daemia</i> against thioacetamide-induced toxicity on rat hepatocytes	159
55. Effect of <i>B. montanum</i> against thioacetamide-induced toxicity on rat hepatocytes	161
56. Effect of PD1 and BM1 on primary cultured rat hepatocytes	164
57. Effect of PD1 and BM1 against CCl ₄ -induced toxicity on rat hepatocytes	165
58. Effect of PD1 and BM1 against paracetamol-induced toxicity on rat hepatocytes	167
59. Effect of PD1 and BM1 against thioacetamide-induced toxicity on rat hepatocytes	169
60. Proton identification from ¹ H NMR spectrum	179
61. Various peaks from ¹³ C NMR	179
62. Various peaks and nature of the carbons from ¹³ C DEPT NMR	183
63. HSQC NMR data representing C-H bond couplings	183
64. Assigning of carbon number to the carbons from HMBC spectra	189
