

## List of Tables

Tables	Page
2.1 Drainage area and Discharge of major rivers of the Ganga system	14
2.2 Sample locations of river sediments	23
2.3 Sample locations of river waters	25
2.4 Coefficient of variation for major ions and silica in river waters	32
2.5 Results of elemental analyses in USGS reference material W-1	34
2.6 Results of repeat analyses of major elements in sediments	36
2.7 Coefficient of variation for different elements in sediments	37
2.8 Replicate measurements of inorganic carbon and total carbon	39
2.9 $^{87}\text{Sr}/^{86}\text{Sr}$ in Arabian Sea water and corals	43
3.1 Sr, Nd, $^{87}\text{Sr}/^{86}\text{Sr}$ and $\epsilon_{\text{Nd}}$ in silicate fraction of bank sediments of the Ganga river system	49
3.2 Variability in Sr concentration in samples from the same location collected during May 2004 and October 2006.	51
3.3 Repeat measurements for Sr and Nd isotopes	52
3.4 Effect of acid leaching on $^{87}\text{Sr}/^{86}\text{Sr}$ in silicates	52
3.5 Spatial and temporal heterogeneity in $^{87}\text{Sr}/^{86}\text{Sr}$ of sediments	53
3.6 $^{87}\text{Sr}/^{86}\text{Sr}$ and $\epsilon_{\text{Nd}}$ of various litho-units of the Ganga System	58
3.7 Fraction of sediment contribution from tributaries to the Ganga mainstream	64
3.8 Estimates of Sediment fraction and erosion rates of various sub-basins of the Ganga	70
3.9 Erosion rates over the Himalaya determined by various techniques	74
3.10 Hotspot contribution in world sediment budget	75
4.1 Dissolved major ions ( $\mu\text{M}$ ), Sr (nM), TDS (mg/L) and $^{87}\text{Sr}/^{86}\text{Sr}$ in the Ganga river and its tributaries	87
4.2 Major ions ( $\mu\text{M}$ ), TDS ( $\text{mg } \ell^{-1}$ ), Sr (nM) and $^{87}\text{Sr}/^{86}\text{Sr}$ in the Gomti, Son and the Yamuna Rivers	95

4.3	Chemical composition of water extract of salt affected surface soils from the Ganga plain (mE: milli equivalent)	96
4.4	Salt Composition of surface soils from the Ganga plains	97
4.5	Ca, Mg abundance and Ca/Mg in the Ganga system	100
4.6	Chemical composition of Rain water, ice and snow in the Himalaya and plain regions	104
4.7	Major ion fluxes and Cation Erosion Rates in the basins of the Ganga and its tributaries	105
4.8	Erosion rates in plain, peninsular and Himalayan sub-basins	106
4.9	Chemical Erosion Fluxes from the Ganga Sub-basins	107
4.10	Average variability in the annual discharge of the Ganga and Yamuna on different time periods	114
4.11	Interannual variation in the major ion concentrations of the Ganga river at Rishikesh (for the month September)	115
4.12	Silicate erosion rates and associated CO <sub>2</sub> consumption in the Ganga and its Himalayan tributaries	119
4.13	Sr concentration and flux of the Ganga and its tributaries	123
4.14	<sup>87</sup> Sr/ <sup>86</sup> Sr of silicates and carbonates of various basins in the Ganga drainage	124
4.15	Chemical and isotopic composition of precipitated carbonates, corresponding waters and evaporites	128
4.16	Ca loss due to calcite precipitation in various river waters which are falling out side the mixing envelop of two end member mixing	129
4.17	Calculation of silicate component for Rishikesh sample	130
4.18	Chemical erosion fluxes of the elements in Ganga @ Allahabad (after the confluence with the Yamuna) expressed in ton day <sup>-1</sup>	136
5.1	Major element composition in bank sediments from the Ganga river and its tributaries	143
5.2	Average composition of Himalayan Crystallines and the Ganga Sediments	149
5.3	IC concentration in bank sediments: comparison of measured	154

	and calculated from Ca and Mg in acid leaches	
5.4	Comparison of CIA of different lithologies and sediments from the Ganga system	156
5.5a	(Element/Al) ratios in silicate component of sediments from the Ganga river	159
5.5b	Silicate weathering flux and associated CO <sub>2</sub> consumption in the Ganga Basin	161
5.6	C <sub>org</sub> abundance in Ganga sediments	165
