

## LIST OF TABLES

Sr. No.	Table Name	Page No.
1.	Trends analysis of different crops at different scales	38
2.	Selected indicators for Vulnerability Assessment	39
3.	Details of Used Optical satellite data	42
4.	Details of Used Microwave Satellite data	43
5.	Spectral indices used in the study	47
6.	Status of vulnerability and its components in different districts	66
7.	Area in hectares and percentage for Landsat and LISS IV data under different land use classes	69
8.	Area in hectares and percentage in Dabhasa village for Landsat and LISS IV data under different classes	72
9.	Statistics generated using Maximum Likelihood and Wishart Supervised classifiers for land use classification of Envisat ASAR data	75
10.	Confusion matrix describing Wishart classification performance	78
11.	Area in hectares and percentage in the selected area for ASAR data under different classes	81
12.	Ground measured biophysical and biochemical parameters of cotton crop at different agricultural fields	85
13.	Ground measured biophysical and biochemical parameters of castor crop at different agricultural fields	86
14.	Ground measured biophysical and biochemical parameters of banana crop at different agricultural fields	87
15.	Ground measured biomass for cotton and banana plants at different agricultural fields	88
16.	Derived NDVI using LANDSAT 5 TM and LISS IV data	90
17.	Derived RVI using LANDSAT 5 TM and LISS IV data	91
18.	Derived NDWI using LANDSAT 5 TM	91
19.	Four classes of crop growth condition based on vegetation health index	127
20.	Vegetation Health Index of cotton crops in different villages	127
21.	Vegetation Health Index of castor crops in different villages	127
22.	Vegetation Health Index of banana crops in different villages	127
