

TABLE OF CONTENTS

Chapter	Title	Page No
Chapter I	Introduction	1
1.1	General Introduction	2
1.2	Assimilation of ammonium, nitrate and nitrite in cyanobacteria.	3
1.2.1	Biochemical regulation of nitrate and nitrite metabolism in cyanobacteria.	4
1.2.2	Molecular biology on ammonium, nitrate and nitrite metabolism in cyanobacteria	8
1.2.3	Genetic regulation of nitrogen metabolism in cyanobacteria.	10
1.3	Nitrogen-fixation in non-heterocystous and heterocystous cyanobacteria.	13
1.3.1	Oxygen dependent regulation of nitrogen-fixation.	14
1.3.2	Heterocyst differentiation	14
1.3.3	Model for heterocyst pattern formation.	16
1.3.4	Molecular biology of heterocyst differentiation.	17
1.3.4.1	HetR	19
1.3.4.2	PatS	20
1.3.4.3	Other group H genes	21
1.3.5	Organization of nitrogen-fixation genes in cyanobacteria	24
1.3.6	DNA genomic rearrangements in <i>Anabaena</i> .	26
1.4	Excision of <i>nifD</i> element of <i>Anabaena</i> PCC 7120 in <i>E. coli</i> .	30
1.5	Evolution of <i>nifD</i> element of <i>Anabaena</i> PCC 7120.	31
1.6	Objectives of the present work.	32
Chapter II	Excision of the <i>nifD</i> element of <i>Anabaena</i> PCC 7120 in <i>E. coli</i> strains grown under different culture conditions.	33
2.1	Introduction	34
2.2	Materials and Methods	35
2.2.1	Media	35
2.2.2	Strains	36
2.2.3	Plasmids	36
2.2.3.1	pMX25	36
2.2.3.2	pMXΔ25	36
2.2.4	Isolation of plasmid DNA.	39
2.2.5	Transformation of plasmid DNA.	39
2.2.6	Restriction enzyme digestion analysis	39
2.2.7	Ligation	39
2.2.8	Agarose gel electrophoresis.	40
2.2.9	Monitoring excision of <i>nifD</i> element by monitoring rearrangement of pMX25 in <i>E. coli</i> .	40
2.2.10	Construction of <i>recA</i> mutant of <i>E. coli</i> JM101.	41
2.2.10.1	P1 transduction	41

2.2.10.a	Growth of P1 lysate on GJ216 (<i>recA srl::Tn10</i>).	41
2.2.10.b	Transduction of JM101 using P1 grown on GJ216.	41
2.2.10.2	Scoring the <i>recA</i> phenotype.	42
2.2.11	Growth characteristics of <i>E. coli</i> containing pMX25 and pMXΔ25 plasmids	42
2.2.12	Competition experiment of blue vs white <i>E. coli</i> colonies on minimal medium	42
2.2.13	Effect of Fe on the rearrangement of <i>nifD</i> element in <i>E. coli</i> .	43
2.3	Results	43
2.3.1	Rearrangement of pMX25 in <i>E. coli</i> .	43
2.3.2	Role of RecA on the excision of pMX25 in <i>E. coli</i>	45
2.3.3	Appearance of anomalous 'white' colonies of <i>E. coli</i> .	51
2.3.4	Effect of iron status on the excision of <i>nifD</i> element.	51
2.3.5	Growth characteristics of blue and white colonies on Luria broth and M9 minimal medium.	53
2.3.6	Competition of blue and white colonies in minimal medium.	53
2.4	Discussion	56
Chapter III	Role of <i>nifA</i> of <i>Klebsiella pneumoniae</i> on the excision of <i>nifD</i> element of <i>Anabaena</i> PCC 7120	58
3.1	Introduction	59
3.2	Materials and methods	62
3.2.1	Strains	62
3.2.2	pMC71A	62
3.2.3	Monitoring excision of <i>nifD</i> element containing pMX25 and pMC71A plasmids in <i>E. coli</i> .	62
3.2.4	Construction of <i>ntrA</i> mutant of <i>E. coli</i> JM101.	64
3.2.5	Rearrangement of <i>nifD</i> element in GN#1, PK#1, NK#2 and NK#6.	64
3.2.6	Time dependent excision of <i>E. coli</i> GN#1 on Luria broth and minimal medium.	65
3.3	Results	65
3.3.1	Role of NifA protein in the excision of pMX25.	65
3.3.2	Role of <i>ntrA</i> of <i>E. coli</i> on the excision of pMX25.	70
3.3.3	Growth dependent excision of <i>E. coli</i> GN#1 on Luria broth and M9 minimal medium.	72
3.3.4	Monitoring excision independent of the growth phase.	75
3.4	Discussion	76
Chapter IV	Endonuclease activity of excisaseA (XisA) of <i>Anabaena</i> PCC 7120.	78
4.1	Introduction	79
4.2	Materials and methods	82
4.2.1	Media	82
4.2.2	Strains	82
4.2.3	Plasmids	82
4.2.3.1	pAn207.65	82
4.2.3.2	pAn256	83

4.2.4	Endonuclease activity of excisase A with pAn207.65 under aerobic conditions.	83
4.2.5	Endonuclease activity of excisase A with pAn207.65 under anaerobic conditions.	86
4.2.6	Endonuclease activity of excisase A with pMX25 under aerobic conditions.	86
4.2.7	Time dependent endonuclease activity of <i>E. coli</i> GN#1 in Luria broth and M9 minimal medium.	87
4.2.8	Endonuclease activity of excisase A in the presence of <i>mfa</i> .	88
4.3	Results	88
4.3.1	Restriction endonuclease activity of excisase A in the <i>E. coli</i> GN#1 grown in M9 minimal medium with ampicillin and chloramphenicol.	88
4.3.2	Growth dependent antibiotic susceptibility of <i>E. coli</i> GN#1 grown in the presence of ampicillin and chloramphenicol.	89
4.3.3	Growth dependent restriction endonuclease activity of excisase A in <i>E. coli</i> GN#1 grown in the absence of antibiotics.	91
4.3.4	Growth dependent of antibiotic susceptibility of <i>E. coli</i> JM101 containing the plasmid pAn207.65 in M9 minimal medium.	95
4.3.5	Endonuclease activity of <i>E. coli</i> JM101 (pAn207.65) grown under different nitrogen sources in the absence of antibiotics.	96
4.3.6	Viability of <i>E. coli</i> JM101 containing pAn256 under different N- sources.	96
4.3.7	Effect of IPTG on the endonuclease activity of excisase A in <i>E. coli</i> .	98
4.3.8	Endonuclease activity of <i>E. coli</i> OK#1.	99
4.4	Discussion	101
Chapter V	Expression of <i>xisA</i> promoter of <i>Anabaena</i> PCC 7120 in <i>Escherichia coli</i> .	104
5.1	Introduction	105
5.2	Materials and methods	106
5.2.1	Strains	106
5.2.2	Plasmids	106
5.2.2.1	pAn207.65	106
5.2.2.2	PMU575	106
5.2.2.3	Construction of pKK#1 plasmid	107
5.2.2.4	Orientation of HindIII fragment in pKK#1 construct	107
5.2.3	β -Galactosidase Assay	107
5.3	Results	113
5.3.1	Construction of P _{<i>xisA</i>} - β -galactosidase fusion plasmid.	113
5.3.2	Expression of <i>xisA</i> in <i>E. coli</i> .	113
5.3.3	Autoregulation of <i>xisA</i> expression.	114
5.4	Discussion	119
	Bibliography	122
	Summary	140
