

TABLE OF CONTENTS

| | |
|---|--------------|
| Acknowledgement..... | III |
| Preface..... | IV |
| List of Figures..... | XII |
| List of Tables | XV |
| Abbreviations | XVII |
| Nomenclature | XVIII |
| | |
| 1. Introduction..... | 01 |
| 1.0 Introduction | 02 |
| 1.1 Background of the proposed research | 04 |
| 2. Literature survey | 06 |
| 2.1 Characteristics of jet | 07 |
| 2.1.1 Behavior of jet | 07 |
| 2.1.2 Types of primary atomization | 10 |
| 2.1.3 Mechanical primary atomization | 11 |
| 2.1.4 Effect of various variables on liquid jet breakup | 13 |
| 2.1.5 Secondary atomization | 17 |
| 2.2 Bubble dynamics and interface phenomenon | 20 |
| 2.2.1 Flow pattern | 20 |
| 2.2.2 Bubble size | 23 |
| 2.2.3 Bubble size distribution | 24 |
| 2.2.4 Measurement techniques of bubble size | 26 |
| 2.2.5 Correlations for entrainment, bubble diameter, drag force and gas hold up | 27 |
| 2.2.6 Factors affecting the bubble size | 30 |
| 2.3 Performance of venturi scrubber | 33 |
| 2.3.1 Performance of high energy venturi scrubber | 35 |
| 2.3.2 Jet ejectors | 41 |
| 2.3.3 Parameters other than geometry of the ejector | 50 |
| 2.4 Gas absorption in jet ejector | 54 |
| 2.4.1 Methods of determination of interfacial area | 54 |

| | | |
|-----------|---|-----------|
| 2.4.2 | Determination of interfacial area by chemical method | 55 |
| 2.4.3 | Determination of overall volumetric mass-transfer coefficient by chemical method | 57 |
| 2.4.4 | Limitations of the chemical method for the determination of mass transfer coefficient | 58 |
| 2.4.5 | Effect of the ejector geometry on the mass transfer characteristics | 59 |
| 2.4.6 | Factors effecting mass transfer characteristics | 64 |
| 2.4.7 | Use of jet ejector in reactor | 65 |
| 2.4.8 | Mass transfer characteristics in multi nozzle jet ejector | 66 |
| 2.4.9 | Mass transfer with chemical reaction | 66 |
| 2.4.10 | Reaction systems used to characterize mass transfer with chemical reaction | 67 |
| 3. | Experimental: equipment, set-up, procedure..... | 72 |
| 3.0 | Introduction | 73 |
| 3.1 | Setup 1 | 73 |
| 3.1.1 | Experimental set up | 73 |
| 3.1.2 | Experimental procedure | 76 |
| 3.2 | Setup 2 | 77 |
| 3.2.1 | Experimental set up | 77 |
| 3.2.2 | Experimental procedure | 77 |
| 3.3 | Setup 3 | 80 |
| 3.3.1 | Experimental set up | 80 |
| 3.3.2 | Experimental procedure | 82 |
| 4. | Modeling and Simulation | 83 |
| 4.0 | Introduction | 84 |
| 4.1 | Prediction of absorption rate and reaction rate constant of chlorine into aqueous sodium hydroxide solution | 84 |
| 4.1.1 | Model for the absorption of chlorine into aqueous <i>NaOH</i> solution based on penetration theory | 85 |
| 4.1.1.1 | Concentration of an individual chemical species in bulk of liquid | 86 |
| 4.1.1.2 | Mass balance at interface applying Higbie's penetration model | 87 |

| | | |
|---------|--|-----|
| 4.1.1.3 | Numerical solution and its implementation | 90 |
| 4.1.2 | Results and discussion | 92 |
| 4.1.3 | Conclusion | 96 |
| 4.2 | Effect of the diffusivities on absorption of chlorine into aqueous sodium hydroxide solution | 97 |
| 4.2.1 | Mechanism of chemical absorption | 98 |
| 4.2.2 | Mathematical models related to absorption | 99 |
| 4.2.3 | Results and discussion | 108 |
| 4.2.4 | Conclusion | 112 |
| 4.3 | Numerical model of rate of absorption in multi nozzle jet ejector (chlorine-aqueous $NaOH$ solution) | 113 |
| 4.3.1 | Mathematical modeling | 114 |
| 4.3.2 | Results and discussions | 117 |
| 4.3.3 | Conclusion | 119 |
| 4.4 | Mass transfer characteristics in multi nozzle jet ejector | 120 |
| 4.4.1 | Hold up | 120 |
| 4.4.2 | New model to predict mass transfer characteristics, k_G and α | 122 |
| 4.4.3 | New mathematical model related to interfacial area for multi nozzle ejectors | 125 |
| 4.4.4 | Results and discussions | 126 |
| 4.4.4.1 | Comparison of experimental results of mass transfer characteristics with simulated results | 126 |
| 4.4.4.2 | Factors affecting rate of absorption ($R_A\alpha$) in liquid jet ejector | 134 |
| 4.4.4.3 | Effect of different parameters on mass transfer characteristics ($k_g\alpha$, α and k_g) in jet ejectors | 135 |
| 4.4.5 | Conclusion | 137 |
| 4.5 | Removal efficiency of chlorine in jet ejector (Chlorine aqueous $NaOH$ solution) | 138 |
| 4.5.1 | Statistical modeling | 139 |
| 4.5.2 | Results and discussions | 139 |
| 4.5.2.1 | Statistical analysis | 142 |

| | | |
|-------------------------|---|------------|
| 4.5.2.2 | Results of statistical analysis in STATGRAPHICS Plus 4 for different nozzles | 144 |
| 4.5.2.3 | Interpretation of the results of statistical analysis in STATGRAPHICS Plus 4 for different nozzles | 154 |
| 4.5.2.4 | Interpretation of figures (graphs) | 156 |
| 4.5.3 | Conclusion | 158 |
| 5. | Future scope of work | 159 |
| Appendices..... | | 162 |
| Appendix - 1 | Experimental data | 163 |
| Appendix - 2 | Analytical procedure | 166 |
| Appendix - 3 | Prediction of physical properties | 171 |
| Appendix - 4 | Calculation of liquid holdup, a , $k_g a$ and k_g | 175 |
| Appendix - 5 | Photographs of experiments | 178 |
| References | | 181 |
