

List of Tables		Page
3.1	Calibration curve for estimation of Galactose.	54
3.2	Calibration curve for estimation of CPM.	56
3.3	Calibration curve for estimation of DIL.	57
3.4	Calibration curve for estimation of PPA.	58
3.5	Interference of formulation excipients in estimation of CPM\DIL\PPA.	60
3.6	Calibration curve of PPA in urine by HPLC.	61
4.1	Hydrolysis and characterisation of GG.	74
4.2	Methylation and characterisation of GG.	78
4.3	Oxidation and characterisation of GG.	81
4.4	Carboxymethylation and characterisation of GG.	85
5.1.1	Composition of formulations with CPM.	91
5.1.2	Composition of formulations with DIL.	91
5.1.3	Composition of formulations with PPA.	91
5.2A	Gel strength of hydrated GG and modified GG matrix tablets with CPM.	98
5.2B	Gel strength of hydrated GG and modified GG matrix tablets with DIL.	99
5.3	Swelling characteristics of GG/HGG/MGG/HPMC matrices.	104
5.4.1	Effect of concentration of GG on release of CPM.	107
5.4.2A	Effect of Hydrolysis of GG on release of CPM from HGG matrices.	110
5.4.2B	Effect of Hydrolysis of GG on release of DIL from HGG matrices.	112
5.4.3A	Effect of Methylation of GG on release of CPM from MGG matrices.	114
5.4.3B	Effect of Methylation of GG on release of DIL from MGG matrices.	116
5.4.4.1A	Effect of Diluents on release of CPM from GG matrices.	119
5.4.4.1B	Effect of Diluents on release of DIL from GG matrices.	121

5.4.4.2A	Effect of Diluents on release of CPM from HGG matrices.	123
5.4.4.2B	Effect of Diluents on release of DIL from HGG matrices.	125
5.4.4.3A	Effect of Diluents on release of CPM from MGG matrices.	127
5.4.4.3B	Effect of Diluents on release of DIL from MGG matrices.	129
5.4.5A	Effect of method of preparation on release of CPM from GG/HGG/MGG matrices.	132
5.4.5B	Effect of method of preparation on release of DIL from GG/HGG/MGG matrices.	134
5.4.6.1A	Effect of pH of dissolution medium on release of CPM form GG matrices.	137
5.4.6.1B	Effect of pH of dissolution medium on release of DIL form GG matrices.	139
5.4.6.2A	Effect of pH of dissolution medium on release of CPM form HGG matrices.	141
5.4.6.2B	Effect of pH of dissolution medium on release of DIL form HGG matrices.	143
5.4.6.3A	Effect of pH of dissolution medium on release of CPM form MGG matrices.	145
5.4.6.3B	Effect of pH of dissolution medium on release of DIL form MGG matrices.	147
5.5.1.1	Swelling characteristics and gel strength of formulations with PPA as model drug.	150
5.5.1.2	Drug release profile from matrix tablets of PPA.	151
5.5.1.3	Urinary excretion data of PPA.	153
6.1	Swelling characteristics and water uptake of GG and OGGs.	162
6.2.1	Composition of tablet and their evaluation for DT.	165
6.2.2	Effect of diluents on DT of tablets.	167
6.2.3	Effect of compressional force on DT of tablets.	169
6.2.4	Effect of pH of disintegration medium onDT of tablets.	169
7.1	Composition and evaluation of films.	178
7.2	Film coating solution of Dummy tablets and their evaluations.	182
