

## LIST OF TABLES

| <b>Table No.</b> | <b>Title</b>   | <b>Page No.</b> |
|------------------|--|-----------------|
| Table: 2.1       | Vesicle Types with their Size and Number of Lipid Layers   | 39              |
| Table: 2.2       | Different Preparation Methods and the Vesicles Formed by these Methods   | 39              |
| Table: 2.3       | Different Liposome with their Compositions   | 39              |
| Table: 2.4       | Phospholipids and Cholesterol which are Used for the Preparation of Liposome and their Transition Temperature (Tc) | 41              |
| Table: 2.5       | Critical parameters for some common inorganics used for supercritical technology                                   | 49              |
| Table: 2.6       | Critical conditions of commonly used supercritical solvents  | 52              |
| Table: 2.7       | Polymer-drug conjugates and polymeric micelles in clinical trials as anticancer agents                             | 65              |
| Table: 2.8       | Integrins and ligands  | 68              |
| Table: 2.9       | Linear peptides  | 71              |
| Table: 2.10      | Cyclic peptide   | 73              |
| Table: 3.1       | Calibration for Docetaxel  | 144             |
| Table: 3.2       | Calibration Curve of PVA ( $\lambda_{max}$ = 690nm)  | 146             |
| Table: 3.3       | Headspace Operating Parameters   | 147             |
| Table: 3.4       | Preparation of diluted RGD standards   | 149             |
| Table: 3.5       | Calibration of RGD by BCA method   | 149             |
| Table: 3.6       | Calibration for estimation of phosphatidyl choline (Stewart assay)   | 151             |
| Table: 3.7       | Calibration for estimation of cholesterol (Zlatkis, Zak and Boyle's method)  | 154             |
| Table: 4.1       | Materials and Equipments   | 161             |
| Table: 4.2       | Variables in Box Behnken Design  | 164             |
| Table: 4.3       | Matrix of Box Behnken Design and Particle size response of each experimental run                                   | 165             |
| Table: 4.4       | Matrix of Box Behnken Design and yield as response of each experimental run  | 165             |

|             |   |     |
|-------------|---|-----|
| Table: 4.5  | Percent Entrapment Efficiency and Particles size of DC liposomes using various lipids         | 167 |
| Table: 4.6a | Variables in Box Behnken Design for formulation parameters                                    | 170 |
| Table: 4.6b | Matrix of Box Behnken Design for optimizing formulation parameters                            | 170 |
| Table: 4.7  | Analysis of Variance for BBD Model of Process parameters                                      | 178 |
| Table: 4.8  | Analysis of Variance for BBD Model of formulation parameters                                  | 178 |
| Table: 4.9  | Optimization of process variables   | 181 |
| Table: 4.10 | Variables in Box Behnken Design   | 182 |
| Table: 4.11 | Matrix of Box Behnken Design for optimizing formulation parameters                            | 182 |
| Table: 4.12 | Influence of Stirring Speed   | 183 |
| Table: 4.13 | Variables in Box Behnken Design   | 184 |
| Table: 4.14 | Matrix of Box Behnken Design for optimizing formulation parameters                            | 184 |
| Table: 4.15 | Analysis of Variance for BBD Model of formulation parameters for solvent evaporation method   | 194 |
| Table: 4.16 | Analysis of Variance for BBD Model of formulation parameters for nanoprecipitation method     | 194 |
| Table: 4.17 | Percent Entrapment Efficiency and Particles size of DC liposomes using various lipids         | 200 |
| Table: 4.18 | Effects of PEGylation on %EE and Particle Size  | 203 |
| Table 4.19  | Effect of different cryoprotectants on the particle size and redispersion of Nanoparticles    | 208 |
| Table 4.20  | Effect of different cryoprotectants on the particle size and redispersion of liposomes        | 208 |
| Table: 4.21 | Influence of amount of RGD  | 210 |
| Table: 4.22 | Influence of Concentration of Activating Agents   | 211 |
| Table: 5.1  | Materials and Equipments  | 220 |
| Table 5.2   | Characterization of optimized RGD conjugated and unconjugated PLGA nanoparticles of Docetaxel | 224 |
| Table: 5.3  | Characterization of optimized RGD conjugated and unconjugated Liposomes of Docetaxel          | 225 |
| Table: 5.4  | Characterization of 6- coumarin nanoparticles   | 238 |

|             |   |     |
|-------------|---|-----|
| Table: 5.5  | Characterization of 6- coumarin liposomes   | 238 |
| Table: 6.1  | Stability studies data of PLGA-DC-NP  | 246 |
| Table: 6.2  | Stability data of PLGA-DC-RGD   | 247 |
| Table: 6.3  | Stability data of Docetaxel liposomes   | 248 |
| Table: 7.1  | Materials and equipments  | 260 |
| Table: 7.2  | Influence of concentration on the Cellular Uptake Efficiency  | 264 |
| Table: 7.3  | Influence of Incubation time on the Cellular Uptake Efficiency  | 266 |
| Table: 7.4  | Cell viability of Docetaxel and Docetaxel Nanoparticles on BT-20 cells                                      | 270 |
| Table: 7.5  | Cell viability of Docetaxel and Docetaxel Nanoparticles on MDA-MB-231 cells                                 | 271 |
| Table: 7.6  | Cell viability of Docetaxel and Docetaxel Liposomes on BT-20 cells  | 272 |
| Table: 7.7  | Cell viability of Docetaxel and Docetaxel Liposomes on MDA-MB-231 cells                                     | 273 |
| Table: 7.8  | IC50 values for Docetaxel and Docetaxel Nanoparticles for BT-20 cells                                       | 278 |
| Table: 7.9  | IC50 values for Docetaxel and Docetaxel Nanoparticles for MDA-MB-231 cells                                  | 278 |
| Table: 7.10 | IC50 values for Docetaxel and Docetaxel Liposomes for MDA-MB-231 cells                                      | 278 |
| Table: 7.11 | IC50 values for Docetaxel and Docetaxel Liposomes for BT-20 cells   | 278 |
| Table: 7.12 | Cell cycle arrest study with Docetaxel  | 282 |
| Table: 7.13 | Cell cycle arrest study with Docetaxel Nanoparticles (PLGA-DC)  | 282 |
| Table: 7.14 | Cell cycle arrest study with RGD conjugated Docetaxel Nanoparticles (PLGA-DC-RGD)                           | 283 |
| Table: 7.15 | Cell cycle arrest study with Docetaxel Liposomes (LP-DC)  | 283 |
| Table: 7.16 | Cell cycle arrest study with RGD conjugated Docetaxel Liposomes (LP-DC-RGD)                                 | 283 |
| Table: 7.17 | Apoptosis Necrosis study with Docetaxel, Docetaxel Nanoparticles and RGD conjugated Docetaxel Nanoparticles | 289 |
| Table: 7.18 | Apoptosis Necrosis study with Docetaxel, Docetaxel Liposomes and RGD conjugated Docetaxel Liposomes         | 289 |
| Table: 8.1  | Feed ratio of compounds for Docetaxel comonomer reaction  | 306 |
| Table: 8.2  | Composition of comonomer feed ratio   | 307 |
