

ACKNOWLEDGMENTS

First of all, I wish to express my deep sense of gratitude to my guide, Dr. D. M. Maurya, for his generous support, encouragement and valuable guidance throughout the course of this study. Without his constant involvement, patience and his endless enthusiasm for neotectonics studies in Kachchh, this study would not have been possible. I have been extremely benefited by his meticulous style of working in the field, countless academic and casual discussions with him. Being associated with him has made me not only a good learner of science, but also into a better human being.

I am deeply indebted to Prof. L. S. Chamyal, my project supervisor, for constant encouragement and painstaking review of this thesis and improving it significantly. I am also grateful to him for his patience and appreciation for me which enabled me to pick up the threads of GPR technique and sustain my interest for pursuing this study.

I thank the Head, Department of Geology, M. S. University of Baroda for providing facilities to carry out this study. I am grateful to Dr. M. G. Thakkar, Kachchh University for useful discussions and his guidance during the arduous and time-consuming field work that forms the basis of this thesis. I would like to thank to Dr. N. P. Bhatt for giving me an opportunity to work with him in Saurashtra, helping me during these years. I have also to thank him for his support during our trip to USA for attending the 11th International Conference on GPR held at The Ohio State University, Columbus. Mr. S. K. Choure and Dr. N. Joshi, Department of Geology, Holkar Science College, Indore encouraged me at every stage of this study. My grateful thanks also due to Dr. Rachna Raj for sharing her knowledge on fluvial geomorphology valuable discussions. Help and support received from Dr. Alpa Sridhar, Dr. Naresh Mulchandani, Dr. S. Bhandari, Shashi Shukla and Bhanu Goyal is gratefully acknowledged. Mr. Sanjay Makwana provided invaluable help in field and GPR studies.

Interactions with well known scientists working with GPR, Dr. L. B. Conyeres, Dr. H. M. Jol, Dr. Adrian Neal and Dr. Karl J. Ellefson and their critical comments on some of my GPR data have been immensely useful for improving my understanding of GPR technique. Discussions with them during the GPR 2006 conference in USA provided valuable inputs which have been fruitfully utilized in the present study.

I express my sincere gratitude for Mr. Suraj P. Sharma, Reliance Industries Limited (RIL) for encouraging me to complete this thesis. I have been benefited by discussions with him on basics of seismic interpretation. My colleagues and fellow group members at RIL for their help and support. I also want to express my gratefulness for two special persons, Mr Sachin Upadhyay and Mr. Lalit Mistry. Both of them are my good friends and provided moral support to me all through this study.

At the last but not least, I would like to thank my family. I feel, that the blessings of my grandfather and grandmother are behind the successful completion of this thesis. My parents have always been providing me with endless love, belief and encouragement, and I want to thank them for their understanding and support through the years. I also want to thank my uncle, aunty, brothers and sister, who have been always there for me. And finally, I could have never finished this thesis without the love, care, companionship and support of my beloved wife, Madhavee Patidar, who, through the years, has been always beside me through the difficulties, stresses, hard work and deadlines. I ascribe everything that I have accomplished, to her.

Atul Kumar Patidar
