

## LIST OF TABLES

Table-1:	Recoveries of ciprofloxacin HCl from ciprofloxacin ophthalmic solution.....	72
Table-2:	Recoveries of ciprofloxacin HCl from ciprofloxacin ophthalmic gel.....	72
Table-3:	Recoveries of ciprofloxacin HCl from ciprofloxacin ophthalmic ointment.....	74
Table-4:	Recoveries of ciprofloxacin from Cip+Dexa suspension.....	79
Table-5:	Recoveries of ciprofloxacin from Cip+Dexa solution.....	79
Table-6:	Recoveries of dexamethasone from Cip+Dexa suspension.....	79
Table-7:	Recoveries of dexamethasone from Cip+Dexa solution.....	80
Table-8:	Results of the recovery studies of benzalkonium chloride from various formulations.....	81
Table-9:	Results of the standardization of ciprofloxacin HCl.....	84
Table-10:	Results of the standardization of dexamethasone.....	87
Table-11:	Results of the standardization of benzalkonium chloride.....	89
Table-12:	Results of the standardization of other additives.....	91
Table-13:	Recovery studies of ciprofloxacin in the presence of various additives and the pH of the resulting solutions.....	95
Table-14:	Results of the recovery studies of ciprofloxacin in the presence of various polymers and the pH of the resulting solutions.....	97
Table-15:	Results of the evaluation of sterilizing CipHCl by exposure to EtO gas....	103
Table-16:	Results of the evaluation of sterilizing dexamethasone at 140°C <i>in vacuo</i> and in air.....	107

Table-17: Results of the assay and measurement of pH of CipHCl solution, before and after sterilization.....	115
Table-18: Results of the liquefaction and gelling behaviour of gels prepared with various concentrations of poloxamer.....	128
Table-19: Results of the initial drug content of the various preparations.....	136
Table-20: Results of the initial assay (as % of the label claim) of BKC from various preparations.....	137
Table-21: Results of the particle-size distribution of CipHCl powder, dexamethasone powder as well as Dexamethasone in suspension.....	141
Table-22: Results of pH measurements of the preparation, on the day of their manufacture.....	142
Table-23: Viscosity measurements of Cip. Gel at 25°C, at different spindle speeds.....	143
Table-24: T <sub>90</sub> values obtained from the release profile drug from of the gel at different polymer concentrations.....	146
Table-25: Accelerated stability data: Content of ciprofloxacin in Cip. solution.....	149
Table-26: Accelerated stability data: Content of ciprofloxacin in Ciplox <sup>R</sup> .....	150
Table-27: Accelerated stability data: Content of ciprofloxacin in Cip. gel (in vial).....	151
Table-28: Accelerated stability data: Content of ciprofloxacin in Cip. Gel (in ointment tube).....	152
Table-29: Accelerated stability data: Content of ciprofloxacin in Cip. Ointment.....	153
Table-30: Accelerated stability data: Content of ciprofloxacin in Cip+Dexa solution...	154
Table-31: Accelerated stability data: Content of dexamethasone in Cip+Dexa solution...	155
Table-32: Accelerated stability data: Content of ciprofloxacin in Cip+Dexa suspension.	156

Table-33:	Accelerated stability data: Content of dexamethasone in Cip+Dexa suspension.	156
Table-34:	Accelerated stability data: Assay of benzalkonium chloride (% of initial) from various preparations, at the end of 6 months of accelerated stability studies.....	157
Table-35:	Accelerated stability data: pH of the preparations at different times during accelerated stability studies.....	158
Table-36:	Accelerated stability data: Data obtained from the <i>in-vitro</i> release profile of ciprofloxacin from the gel: initial (zero day) values and those obtained after storage for 6 months at different temperatures.....	159
Table-37:	Accelerated stability data: Viscosity of the gel (in vial) after the completion of 6 months of accelerated stability studies.....	161
Table-38:	Accelerated stability data: Particle size distribution of dexamethasone, initially and after storage at 5°C and 25°C for a period of 6 months.....	162
Table-39:	Results of the preservative effectiveness test..	167
Table-40:	Treatment protocol for efficacy study of Cip+Dexa formulations.....	174
Table-41:	Dosing and sampling protocol for determining the aqueous humour drug concentration - time profile.....	178
Table-42:	Dosing and sampling protocol for determination of the aqueous humour drug concentration - time profile following application of multiple doses of Cip.solution and single dose of Cip. gel.....	180
Table-43:	Dosing and sampling protocol for determination of the aqueous humour drug concentration - time profile obtained after application of a single dose of Cip. ointment and multiple doses of Cip. solution.....	181
Table-44:	Results of the pharmacokinetic values obtained for different dosage forms.....	186
