<b>Abstract</b>	<b>vii</b>
<b>Chapters</b>	
<b>1 Introduction</b>	<b>1</b>
<b>2 Some Mathematical Aspects of Spectral Averaging Theory</b>	<b>22</b>
2.1 Preview . . . . .	22
2.2 Statistical distributions . . . . .	23
2.2.1 Univariate distributions . . . . .	23
2.2.2 Bivariate distributions . . . . .	26
2.3 State, expectation value and strength densities: CLT results .	31
2.3.1 State densities . . . . .	31
2.3.2 Expectation values and expectation value densities .	32
2.3.3 Strength densities . . . . .	34
2.4 Partitioning : spherical and unitary configurations . . . . .	36

2.5	Unitary decomposition of operators . . . . .	40
2.5.1	$U(N)$ group . . . . .	40
2.5.2	Spherical configuration group $U(N_\alpha) \oplus U(N_\beta) \oplus \dots$ . .	43
2.5.3	Unitary configuration group $U(N_\alpha) \oplus U(N_\beta) \oplus \dots$ . .	44
2.6	Trace propagation . . . . .	46
2.6.1	$U(N)$ group averages . . . . .	46
2.6.2	Spherical configuration averages . . . . .	51
2.6.3	Unitary configuration averages : . . . . .	52
2.7	Summary . . . . .	55
<b>3</b>	<b>Tests of Some Aspects of Spectral Averaging Theory in Large Shell Model Spaces for State, Spin-Cutoff and Occupancy Densities</b>	<b>56</b>
3.1	Introduction . . . . .	56
3.1.1	$S$ - decomposition . . . . .	57
3.1.2	Convolution form for state densities . . . . .	61
3.1.3	Convolution forms for spin-cutoff and occupancy densities	67
3.1.4	Moment methods and convolution forms for NIP state, spin-cutoff and occupancy densities . . . . .	68
3.1.5	Summary of convolution results and conventions for pn systems . . . . .	71

3.2	Test of the smallness of $V^{[0][2]}$ part of various interactions . . . . .	73
3.3	Tests of moment methods for NIP state, spin-cutoff and occupancy densities . . . . .	91
3.4	Summary . . . . .	103
<b>4</b>	<b>Analysis of Level Density Data for <i>fp</i>-Shell Nuclei: Systematic Calculations Using SAT-LSS</b>	<b>105</b>
4.1	Preview . . . . .	105
4.2	Selection of nuclei, choice of orbits and the hamiltonian and the procedure for calculations . . . . .	107
4.2.1	Choice of <i>fp</i> -shell nuclei . . . . .	107
4.2.2	Reference energy . . . . .	108
4.2.3	Choice of the single particle orbits and the two-body interaction . . . . .	110
4.2.4	Unitary orbits for spreading variances and NIP calculations . . . . .	112
4.2.5	Ratio of $J^2$ -density variance and state density variance	116
4.2.6	Procedure for calculations . . . . .	118
4.3	8-orbit results for $^{55}Mn$ , $^{56}Fe$ , $^{59}Co$ , $^{60}Co$ , $^{60}Ni$ and $^{63}Cu$ . . .	121
4.3.1	Nucleus $^{55}Mn$ . . . . .	121
4.3.2	Nucleus $^{56}Fe$ . . . . .	128
4.3.3	Nucleus $^{59}Co$ . . . . .	131

4.3.4	Nucleus $^{60}Co$	132
4.3.5	Nucleus $^{60}Ni$	136
4.3.6	Nucleus $^{63}Cu$	140
4.3.7	Summary of 8-orbit calculations	143
4.4	Level Density Calculations for <i>fp</i> -shell Nuclei : 10-Orbit Results	144
4.4.1	Choice of <i>s</i> values, single particle energies and centroid separations	144
4.4.2	Nucleus $^{62}Ni$	149
4.4.3	Nucleus $^{63}Cu$	153
4.4.4	Nucleus $^{65}Cu$	155
4.5	Summary	157
<b>5</b>	<b>Non-Interacting Particle Strength Densities for One-Body Transition Operators</b>	<b>159</b>
5.1	Introduction	159
5.2	One-body transition operators	161
5.3	NIP strength densities	163
5.4	Exact expression for $I_O^h$ : spherical configurations	164
5.4.1	Identical particles	164
5.4.2	pn systems	166
5.5	S-decomposition of strength densities	167

5.6	Scalar strength density bivariate moments: identical particles . . . . .	169
5.7	Unitary configuration strength density bivariate moments . . . . .	174
5.7.1	Identical particles . . . . .	174
5.7.2	pn systems . . . . .	180
5.7.3	Partial $M_{PQ}([m], [m'])$ moments . . . . .	182
5.8	Test of moment method for constructing $I_{\mathcal{O}(GT)}^h$ . . . . .	183
5.9	Summary . . . . .	189
<b>6</b>	<b>Interacting Particle Bivariate GT Strength Densities in SAT-LSS and <math>\beta</math>-Decay Rates for Some <math>A &gt; 60</math> fp-Shell Nuclei Relevant for Presupernova Stars</b>	<b>191</b>
6.1	Introduction . . . . .	191
6.2	IP strength densities for Gamow - Teller transition operator . . . . .	194
6.3	Formalism for $\beta$ -decay rates at finite temperature . . . . .	196
6.4	Calculational procedure . . . . .	199
6.4.1	State Densities . . . . .	200
6.4.2	Strength densities . . . . .	201
6.4.3	Comments . . . . .	203
6.5	GT NEWSR strength . . . . .	205
6.6	Results for $\beta$ -decay rates at finite temperature . . . . .	207
6.7	Summary . . . . .	211

<b>7 Conclusions and Future Outlook</b>	<b>213</b>
<b>References</b>	<b>220</b>
<b>Appendices</b>	
<b>A Mixing Between Distant Configurations: <math>S = 0 \oplus 2</math> Shell Model Example</b>	<b>237</b>
A.1 Two spike model . . . . .	237
A.2 Numerical test . . . . .	240
<b>B Matrix Elements of Surface Delta Interaction and Pairing Plus Quadrupole-Quadrupole Interaction</b>	<b>244</b>
B.1 Surface Delta Interaction (SDI) . . . . .	244
B.2 Pairing plus quadrupole-quadrupole interaction (P + Q.Q) . .	246
<b>C Compilation of Level Density and Spin-Cutoff Factor Data for <math>fp</math>-Shell Nuclei</b>	<b>249</b>
C.1 Fermi gas forms for level densities and spin-cutoff factors . .	250
C.2 Brief description of the experimental methods . . . . .	255
C.3 Compilation of data . . . . .	263
<b>D <math>\epsilon_{\alpha\beta}^{(L)}</math> Matrix Elements for Electric and Magnetic Multipole Operators</b>	<b>276</b>
