- (2) For the university as a whole also we get more or less an identical picture of the occupational status of the students' parents:

In 1962-63, the parents of 40% of the university students were in service, 40 per cent in business and agriculture, and the remaining 20 per cent were artisans and employed in other occupations.

In 1965-66 also three occupations predominated - Service, Business and Agriculture.
