

## CONTENTS

Chapter		Page
	Introduction	1
I	Manipulation of adrenocortical functions : Alterations in testes, thyroid and adrenal of intact and pinealectomised pigeons in the breeding and regression phases.	10
II	Pineal-adrenal-thyroid interactions in testicular functions in feral pigeons : Studies with exogenous corticosterone administration in the non-breeding phase.	41
III	Circannual variations in carbohydrate metabolism in relation to testicular cyclicity and the influence of pinealectomy or altered adrenocortical activity.	55
IV	Circannual variations in tissue ascorbic acid contents in relation to testicular cyclicity and the influence of pinealectomy or altered adrenocortical activity.	78

V	Influence of corticosterone on testicular functions and thyroid activity in pigeons treated with gonadotrophic hormones in the quiescent phase.	94
VI	Influence of corticosterone or gonadotrophic hormones alone or in combination on carbohydrate metabolism in feral pigeons in the quiescent phase.	124
VII	Influence of corticosterone or gonadotrophic hormones either alone or in combination on tissue ascorbic acid content in feral pigeons in the quiescent phase.	134
	SUMMARY	140
	GENERAL CONSIDERATIONS	147
	BIBLIOGRAPHY.	168
