

## **Genetic modification strategies in Rhizobia to combat abiotic stress in legumes**

### **Table of contents**

<b>Contents</b>	<b>Page no.</b>
<b>List of abbreviations</b>	<b>I-II</b>
<b>List of Figures</b>	<b>III-VIII</b>
<b>List of Tables</b>	<b>IX</b>
<b>Abstract</b>	<b>X-XII</b>
<b>1. Introduction</b>	<b>1</b>
1.1 Background	1
1.2 Soil pollution: An emerging threat to agriculture	3
1.2.1 Contribution of soil in agriculture sustainability	3
1.2.2 Threats to soil and environment	4
1.2.3 Extent of soil degradation in India	6
1.3 Heavy metal pollution	7
1.3.1 Sources of heavy metal pollution	7
1.3.2 Negative effects of heavy metal pollution	8
1.3.3 Records of soil pollution by heavy metals throughout India	10
1.3.3.1 Arsenic pollution prevalence in India	10
1.3.3.2 Cadmium pollution prevalence in India	11
1.4 Heavy metal remediation	12
1.4.1 Phytoremediation	12
1.4.2 Bioremediation	13
1.4.2.1 Mechanisms employed by bacteria/PGPR to combat heavy metals	14
1.5 Symbiosis- heavy metals- glutathione relation and interplay	16
1.5.1 Rhizobium, a PGPR capable of symbiosis with legumes	16
1.5.2 Prokaryotic glutathione secretion mechanism and the importance of rhizobial glutathione in symbiosis	17
1.6 Effect of heavy metal stress on fenugreek and alleviation of stress by PGPR	18
1.6.1 Fenugreek- an important culinary microgreen	18

## **Genetic modification strategies in Rhizobia to combat abiotic stress in legumes**

<b>1.7 Goal of our study</b>	<b>19</b>
<b>1.8 References</b>	<b>20-28</b>
<b>2. Objectives of our study</b>	<b>29-30</b>
<b>3. Cloning <i>Escherichia coli</i> DH10B Gamma glutamyl Cysteine synthetase (YbdK) in rhizobia for the overproduction of glutathione</b>	<b>31</b>
<b>3.1 Introduction</b>	<b>32</b>
<b>3.1.1</b> Biosynthesis of Glutathione	32
<b>3.1.2</b> Roles of glutathione in bacteria	32
<b>3.1.3</b> Roles of glutathione in Plant-rhizobia interaction	33
<b>3.1.4</b> YbdK is a Carboxylate-amine ligase found in <i>E. coli</i>	34
<b>3.1.5</b> Rationale behind using YbdK in this study	34
<b>3.2 Materials and methods</b>	<b>35</b>
<b>3.2.1</b> Microorganisms, plasmids and primers used in the study	35
<b>3.2.2</b> Bacterial growth media composition	37
<b>3.2.3</b> Genomic DNA extraction and PCR amplification	38
<b>3.2.4</b> Restriction cloning	40
<b>3.2.5</b> Bacterial transformation and plasmid purification	41
<b>3.2.6</b> Plasmid validation by restriction digestion	41
<b>3.2.7</b> Transformation of Rhizobium by electroporation	41
<b>3.2.8</b> Bacterial growth curve	41
<b>3.2.9</b> Glutathione estimation from bacteria	42
<b>3.3 Results and Discussion</b>	<b>43</b>
<b>3.3.1</b> Construction of a recombinant plasmid pPAT	43
<b>3.3.2</b> Transformation of Rhizobium bacteria by the recombinant plasmid pPAT	48
<b>3.3.3</b> Growth curve of wild type and transformed Rhizobium	50
<b>3.3.4</b> Estimation of glutathione from the wild type and transformed rhizobium bacteria	52

## **Genetic modification strategies in Rhizobia to combat abiotic stress in legumes**

<b>3.4 Conclusion</b>	<b>55</b>
<b>3.5 References</b>	<b>56-59</b>
<b>4. Determining the effect of rhizobia overproducing glutathione on abiotic stress mediated damage in fenugreek seedling</b>	<b>60</b>
<b>4.1 Introduction</b>	<b>61</b>
<b>4.1.1</b> Fenugreek and its agricultural importance	61
<b>4.1.2</b> Heavy metal stress in Legumes and its mitigation by PGPR	62
<b>4.1.3</b> Plan of work	63
<b>4.2 Materials and methods</b>	<b>63</b>
<b>4.2.1</b> Bacterial growth and colony morphology under the influence of heavy metal stress	63
<b>4.2.2</b> Seed radicle emergence test	64
<b>4.2.3</b> Spot assay	64
<b>4.2.4</b> Soil selection and analysis	64
<b>4.2.5</b> Bacterization of seeds and pot experiments	65
<b>4.2.6</b> Growth measurements	66
<b>4.2.7</b> Chlorophyll and Carotenoids estimation	67
<b>4.2.8</b> Estimation of hydrogen peroxide	67
<b>4.2.9</b> Estimation of Lipid peroxidation	67
<b>4.2.10</b> Antioxidant enzyme estimation from roots and shoots	67
<b>4.3 Results and Discussion</b>	<b>69</b>
<b>4.3.1</b> Effect of arsenic and cadmium on the growth and colony morphology of bacteria	69
<b>4.3.2</b> Effect of Arsenic and Cadmium on seed radicle emergence	71
<b>4.3.3</b> Spot analysis to determine the sensitivity of bacteria towards arsenic and cadmium	72
<b>4.3.4</b> Investigating the effect of genetically modified Sinorhizobium fredii NGR 234 & Sinorhizobium meliloti (NAIMCC-B-00863)	74

### **Genetic modification strategies in Rhizobia to combat abiotic stress in legumes**

on the growth of fenugreek seedlings in Arsenic contaminated soil.	
<b>4.3.4.1</b> Assessment of growth and chlorophyll production in fenugreek seedlings treated with GMO and wild type bacteria growing in Arsenic contaminated soil	74
<b>4.3.4.2</b> Changes in the production of H <sub>2</sub> O <sub>2</sub> and MDA in fenugreek seedlings treated with GMO and wild type PGPR growing in Arsenic contaminated soil	80
<b>4.3.4.3</b> Changes in antioxidant enzymes in Arsenic stressed fenugreek seedlings treated with GMO and wild type rhizobium bacteria.	82
<b>4.3.5</b> Investigating the effect of genetically modified Sinorhizobium fredii NGR 234 & Sinorhizobium meliloti (NAIMCC-B-00863) on the growth of fenugreek seedlings in Cadmium contaminated soil.	86
<b>4.3.5.1</b> Assessment of growth and chlorophyll production in fenugreek seedlings treated with GMO and wild type bacteria growing in Arsenic contaminated soil	86
<b>4.3.5.2</b> Changes in the production of H <sub>2</sub> O <sub>2</sub> and MDA in fenugreek seedlings treated with GMO and wild type PGPR growing in Cadmium contaminated soil	91
<b>4.3.5.3</b> Changes in antioxidant enzymes in cadmium stressed fenugreek seedlings treated with GMO and wild type rhizobium bacteria	93
<b>4.3.5.4</b> Discussion	95
<b>4.3.6</b> Effect of rhizobial consortium on fenugreek seedlings growing in Arsenic and Cadmium contaminated soil	96
<b>4.3.6.1</b> Assessment of growth parameters, chlorophyll production, oxidative parameters and antioxidant enzyme levels in fenugreek seedlings treated with GMO and wild type bacteria growing in Arsenic contaminated soil	96-107
<b>4.4 Conclusion</b>	<b>107</b>
<b>4.5 References</b>	<b>108-114</b>

## **Genetic modification strategies in Rhizobia to combat abiotic stress in legumes**

<b>5. Exploring the ability of genetically modified rhizobia to produce nanoparticles to combat heavy metal stress.</b>	<b>115</b>
<b>5.1 Introduction</b>	<b>116</b>
<b>5.1.1</b> Heavy metal bioremediation by microorganisms	116
<b>5.1.2</b> Biosynthesis of nanoparticles by microorganisms	116
<b>5.1.3</b> Rationale behind the objective	117
<b>5.2 Materials and Methods</b>	<b>117</b>
<b>5.2.1</b> Biosynthesis of Cadmium sulphide nanoparticles and glutathione estimation	117
<b>5.2.2</b> Characterization of cadmium sulphide nanoparticles	118
<b>5.3 Results and Discussion</b>	<b>119</b>
<b>5.3.1</b> Glutathione estimation from supernatant	119
<b>5.3.2</b> Cadmium sulphide (CdS) nanoparticles biosynthesis	120
<b>5.3.3</b> Characterization of Cadmium sulphide nanoparticles	122
<b>5.4 Conclusion</b>	<b>128</b>
<b>5.5 References</b>	<b>129-133</b>
<b>6. Summary</b>	<b>134-136</b>
