

# Table of Contents

|   |             |
|---|-------------|
| <b>List of Figures.....</b>   | <b>v</b>    |
| <b>List of Tables.....</b>  | <b>viii</b> |
| <b>Chapter 1: Introduction.....</b>                                 | <b>1</b>    |
| 1.1    Energy Crisis: Challenges and Solutions .....                | 1           |
| 1.2    Water Splitting Method for Hydrogen Production .....         | 1           |
| 1.3    Hydrogen Storage: Challenges, Methods and Advancements ..... | 3           |
| 1.4    Two-dimensional (2D) Materials .....                         | 4           |
| 1.4.1    Graphene: Pioneering the Era of 2D Materials.....          | 4           |
| 1.4.2    Beyond Graphene: Advancements in 2D Materials.....         | 5           |
| 1.4.3    2D Materials for Water Splitting.....                      | 8           |
| 1.4.4    2D Materials for Hydrogen Storage.....                     | 10          |
| 1.5    Materials and Methodology for Research Work .....            | 12          |
| 1.6    Structure of the Present Thesis.....                         | 13          |
| References .....  | 15          |
| <b>Chapter 2: Methodology.....</b>                                  | <b>19</b>   |
| 2.1    Introduction to Many-body Problem.....                       | 19          |
| 2.1.1    Born-Oppenheimer Approximation .....                       | 20          |
| 2.1.2    Hartree Approach .....                                     | 21          |
| 2.1.3    Hartree-Fock Approach.....                                 | 22          |
| 2.2    Density Functional Theory.....                               | 23          |
| 2.2.1    Thomas-Fermi Theory .....                                  | 23          |
| 2.2.2    Hohenberg-Kohn Theorems.....                               | 24          |
| 2.2.3    Kohn-Sham Approach.....                                    | 26          |
| 2.3    Exchange-Correlation Functionals.....                        | 28          |
| 2.3.1    Local Density Approximation.....                           | 29          |
| 2.3.2    Generalized Gradient Approximation .....                   | 29          |
| 2.4    Electronic Approximation .....                               | 30          |
| 2.4.1    Pseudopotential Formalism.....                             | 31          |
| 2.4.2    Van der Waals Corrections .....                            | 32          |
| 2.5    Lattice Dynamics and Ab Initio Molecular Dynamics.....       | 33          |
| 2.5.1    Density Functional Perturbation Theory.....                | 33          |
| 2.5.2    Ab Initio Molecular Dynamics .....                         | 35          |
| 2.6    Computational Packages .....                                 | 36          |

|                   |   |           |
|-------------------|---|-----------|
| 2.6.1             | Quantum Espresso Package .....  | 36        |
| 2.6.2             | Vienna Ab initio Simulation Package .....   | 36        |
| 2.7               | Summary .....   | 37        |
|                   | References .....  | 37        |
| <b>Chapter 3:</b> | <b>Single Atom Catalysts Supported on 2D <math>\alpha</math>-SiX (X = N, P, As, Sb, Bi) and Holey Graphyne for HER Activity .....</b> | <b>40</b> |
| 3.1               | Introduction .....  | 40        |
| 3.2               | Computational Details.....  | 42        |
| 3.3               | Results and Discussion.....   | 43        |
| 3.3.1             | Structure and Electronic Properties of Pristine $\alpha$ -SiX (X = N, P, As, Sb and Bi) and HGY Monolayers.....                       | 43        |
| 3.3.1.1           | Pristine $\alpha$ -SiX (X = N, P, As, Sb and Bi) Monolayers .....   | 43        |
| 3.3.1.2           | Pristine HGY Monolayer.....   | 46        |
| 3.3.2             | HER Activity over Pristine $\alpha$ -SiX (X = N, P, As, Sb and Bi) and HGY Monolayers .....   | 47        |
| 3.3.3             | Binding Energy for Transition Metal Anchored $\alpha$ -SiX (X = N, P, As, Sb and Bi) and HGY Monolayers.....                          | 48        |
| 3.3.3.1           | Ni Anchored $\alpha$ -SiX (X = N, P, As, Sb and Bi) Monolayers as SACs .....  | 48        |
| 3.3.3.2           | Transition Metal Anchored HGY Monolayers as SACs .....  | 51        |
| 3.3.4             | Structural Changes and Band Structure Analysis of the SACs.....   | 51        |
| 3.3.4.1           | Ni Anchored $\alpha$ -SiX SACs .....  | 52        |
| 3.3.4.2           | Transition Metals Anchored HGY SACs .....   | 54        |
| 3.3.5             | PDOS and Charge Transfer Analysis of the SACs .....   | 55        |
| 3.3.5.1           | Ni Anchored $\alpha$ -SiX (X = N, P, As, Sb and Bi) SACs.....   | 55        |
| 3.3.5.2           | Transition Metals Anchored HGY SACs .....   | 59        |
| 3.3.6             | HER Activity over the SACs .....  | 61        |
| 3.3.6.1           | HER Activity over Ni Anchored $\alpha$ -SiX (X = N, P, As, Sb and Bi) SACs.....   | 62        |
| 3.3.6.2           | HER Activity over Transition Metals Anchored HGY SACs .....   | 66        |
| 3.3.7             | Stability of the SACs from AIMD Simulations .....   | 70        |
| 3.3.8             | Drawing Comparison with Previous Studies .....  | 72        |
| 3.4               | Conclusions .....   | 72        |
|                   | References .....  | 73        |
| <b>Chapter 4:</b> | <b>Defects and Doping Engineered 2D o-B<sub>2</sub>N<sub>2</sub> for HER Activity .....</b>   | <b>76</b> |
| 4.1               | Introduction .....  | 76        |
| 4.2               | Computational Details.....  | 78        |
| 4.3               | Results and Discussion.....   | 79        |

|                                   |  |            |
|-----------------------------------|--|------------|
| 4.3.1                             | Pristine 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 79         |
| 4.3.2                             | Effect of the Defects on the 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 81         |
| 4.3.3                             | HER Activity of the Defected 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 83         |
| 4.3.4                             | Effect of the Carbon Doping on the 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 88         |
| 4.3.5                             | HER Activity of the Carbon doped 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 91         |
| 4.3.6                             | Effect of pH on the HER activity .....   | 94         |
| 4.3.7                             | Stability of the HER Catalysts from AIMD Simulations.....  | 94         |
| 4.3.8                             | Drawing Comparison with Previous Studies .....   | 95         |
| 4.4                               | Conclusions .....  | 96         |
|                                   | References .....   | 97         |
| <b>Chapter 5:</b>                 | <b>Hydrogen Storage Properties of the Pristine, Defected and Metal Decorated o-B<sub>2</sub>N<sub>2</sub> Monolayer.....</b> | <b>100</b> |
| 5.1                               | Introduction .....   | 100        |
| 5.2                               | Computational Details.....   | 102        |
| 5.3                               | Results and Discussion.....  | 103        |
| 5.3.1                             | Pristine 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 103        |
| 5.3.2                             | Alkali and Alkaline-Earth Metals Decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 104        |
| 5.3.3                             | Defected 2D o-B <sub>2</sub> N <sub>2</sub> .....  | 107        |
| 5.3.4                             | Transition Metals Decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....   | 108        |
| 5.3.4.1                           | Interaction of Transition Metals with 2D o-B <sub>2</sub> N <sub>2</sub> .....   | 108        |
| 5.3.4.2                           | Adsorption of the First Hydrogen Molecule over Transition Metals Decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....          | 110        |
| 5.3.4.3                           | Electronic Properties of the Ti decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....   | 111        |
| 5.3.4.4                           | Electronic Properties of the First Hydrogen Molecule Adsorbed Ti Decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....          | 112        |
| 5.3.4.5                           | Adsorption of the Hydrogen Molecules over Ti decorated 2D o-B <sub>2</sub> N <sub>2</sub> .....                              | 113        |
| 5.3.4.6                           | Gravimetric Storage Capacity for Hydrogen Storage and Desorption Temperature Calculation .....                               | 116        |
| 5.3.4.7                           | Stability Assessment at Desorption Temperature from AIMD Calculation .   | 117        |
| 5.3.5                             | Drawing Comparison with Previous Studies .....   | 119        |
| 5.4                               | Conclusions .....  | 119        |
|                                   | References .....   | 120        |
| <b>Chapter 6:</b>                 | <b>Summary and Future Prospects.....</b>   | <b>123</b> |
| 6.1                               | Summary .....  | 123        |
| 6.2                               | Future Prospects .....   | 125        |
| <b>List of Publications .....</b> | <b>127</b>   |            |
