Acknowledgements	I
Abstract	III
List of Tables	XI
List of Figures	XII
Chapter 1 Introduction	1-38
1.1 Introduction to solid electrolytes	3
1.2 Types of Solid Electrolytes (SE)	
(a) Glass Solid Electrolytes	4
(b) Polymer /Gel Polymer Electrolytes	5
(c) Composite Electrolytes	9
(d) NASICON	11
1.3 The Glass Solid Electrolytes (GSE)	12
1.4 Types of Ion Conducting Glasses	20
(a) Glasses with Single Glass Former	20
(b) Glasses with Mixed Glass Former	22
(c) Theory of Halide Salt	24
1.5 Application of ion conducting Glass material	27
1.6 Motivation and Objective of Present Work	27
Bibliography	
Chapter 2 Model For Ion Transport in Glasses	39-65
2.1 Introduction	41
2.2 Ion transport mechanism in Solid State Material	42
(a) DC conductivity Models	46
(i) The Anderson-Stuart Model	46
(ii) The Weak Electrolyte Model	48
(iii) The Cluster Bypass Model	49
(b) AC conductivity Models	51
(i) The Random Site Model	52
(ii) The Diffusion Pathway model	53
(iii) The Jump Relaxation Model	55
(iv) Correlated Barrier Hopping Model	57
(V) Quantum Mechanical Tunneling Model	59
(vi) Non-Overlapping Small Polaron Theory	60
Bibliography	

Chapter 3	Material Preparation and Characterization Techniques	67-98
3.1	Introduction	69
3.2	Method of sample preparation	70
3.3	Experimental techniques	
3.3.1	Physical Characterization	72
3.3.2	Structural Characterization	74
	(a) Powder x-ray diffraction	74
	(b) Fourier transform – infrared spectroscopy	75
3.3.3	Thermal Characterization	78
3.3.4	Scanning Electron Microscopy	81
3.3.5	Electrochemical Impedance spectroscopy	82
	(a) Complex Impedance Formalism	85
	(b) Complex Conductivity Formalism	89
	(c) Complex Dielectric Formalism	91
	(d) Complex (Electric) Modulus Formalism	93
	Bibliography	
Chapter 4	Physical, Structural, Thermal and Electrical properties of $x(\text{LiI}): (100 - x)[60\text{Li}_2\text{O}: (8\text{B}_2\text{O}_3 + 32\text{P}_2\text{O}_5)]$ glass series	99-155
4.1	Introduction to the Glass Series	101
4.2	Experimental	
4.2.1	Material used	103
4.2.2	Preparation Method	103
4.3	Results and discussion	103
4.3.1	Physical Characterization	103
4.3.2	Thermal Characterization	104
4.3.3	Structural Characterization	105
4.3.4	Electrical Characterization/Impedance Spectroscopy	110
	(a) DC conductivity	110
	(b) Frequency Dependent Conductivity	116
	 Conductivity Scaling	120
	 Ion Transport Model	126
	(c) Dielectric study	128
	(d) Electric Modulus study	134
	 Modulus Scaling	144
4.4	Conclusion	148
	Bibliography	

Chapter 5	Physical, Structural, Thermal and Electrical properties of $x(NaI): (100 - x)[30Na_2O: (56B_2O_3 + 14P_2O_5)]$ glass series	157-221
5.1	Introduction to the Glass Series	159
5.2	Experimental	
5.2.1	Material used	161
5.2.2	Preparation Method	161
5.3	Results and discussion	162
5.3.1	Physical Characterization	162
5.3.2	Thermal Characterization	163
5.3.3	Structural Characterization	165
5.3.4	Electrical Characterization/Impedance Spectroscopy	171
	(a) DC conductivity	171
	(b) Frequency Dependent Conductivity	179
	 Hopping Frequency	184
	 Conductivity Scaling	188
	(c) Dielectric study	192
	(d) Electric Modulus study	200
	 Modulus Scaling	206
5.4	Conclusion	210
	Bibliography	
Chapter 6	Physical, Structural, Thermal and Electrical properties of $x(AgI): (100 - x)[30Ag_2O: (56B_2O_3 + 14P_2O_5)]$ glass series	223-286
6.1	Introduction to the Glass Series	225
6.2	Experimental	
6.2.1	Material used	228
6.2.2	Preparation Method	228
6.3	Results and discussion	229
6.3.1	Physical Characterization	229
6.3.2	Thermal Characterization	230
6.3.3	Structural Characterization	233
6.3.4	Electrical Characterization/Impedance Spectroscopy	240
	(a) DC conductivity	240
	(b) Frequency Dependent Conductivity	246
	 Ion Transport Model	249
	 Conductivity Scaling	251
	(c) Dielectric study	254
	(d) Electric Modulus study	265
	 Modulus Scaling	271
6.4	Conclusion	277
	Bibliography	

Chapter 7	Comparison of Li^+, Na^+ and Ag^+ Glass systems	287-305
7.1	Introduction	289
7.2	Results and discussion	291
7.2.1	Thermal Study	293
7.2.2	Ion Transport Study	294
(a)	Conductivity Study	294
(b)	Dielectric Study	298
(c)	Electric Modulus study	299
(d)	Time-Temperature Superposition Study	300
(e)	Thermodynamic Fragility ($F_{1/2}$)	301
(f)	Ionicity (ΔC_p)	301
7.3	Conclusion	302
	Bibliography	
	Annexure	307
